Amen... if someone is taking THEIR time to gather the information, and the information is PUBLIC information, and they are paying for the website and the bandwidth (and it supplies a service for hams) then he has the right to advertise to recoup his outlay, and I see nothing wrong with him making a profit. If the advertisers are willing to pay for the space, then that's up to them...

2145. Shure 444D on TS-930S?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-04 19:52:39 UTC
From: Bjorn Henrik Vangstein <vangsteFJERNDETTE@online.no>
Message-ID: <bCf39.6149$sR2.109966@news4.ulv.nextra.no>
Source record: 40706

Does anyone have any experience with the Shure 444D on the Kenwood TS-930S?
Does the microphone's impedance and signal level match the input on the rig?
If so, how is the audio quality?

73's de LA5MDA, Henrik

2147. 100 KHZ HF Interference

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-04 20:02:06 UTC
From: Steve <mbfudd@yahoo.com>
Message-ID: <3d1rku0anscefdf00cu0dduv4trlqhfg33@4ax.com>
Source record: 40708

A strange, buzzing "rasping" noise, sounds like two or three different, very low frequencies in the 100 Hz range being transmitted simultanously. Appears every 100 Khz and sweeps across the band very slowly, always 100 Khz between signals. Do not think is a signal being transmitted, more like something radiating in area. Strong, will take out a QSO. Has plagued me in two different QTH's in past 2 years. Used DF equipment, turned power off, house clean of any radiation. Any thoughts / ideas? Neighbors house, cable modem, radio type babysitter monitor? Someone out there must of been plagued by it too! Drives me up the wall!

Steve

2148. FS-REDUCED: one more try before eBay

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-04 20:07:52 UTC

Message-ID: <sQf39.4688$qf5.1575@nwrddc01.gnilink.net>
Source record: 40709

I have the following equipment for sale (I need to clear some space, and help pay for an IC-756Pro II). All prices include UPS ground shipping in the continental US. I can can send pictures of any items if needed.

Kenwood TS-850S/AT - I bought this new in 1994 and have used it for my main rig since then. It has INRAD 400-Hz filters in the 8.83-Mhz and 455-kHz IFs, and an INRAD 2.1-kHz filter in the 8.83-MHz IF, and comes with a Kenwood MC-50 microphone, homebrew computer interface (uses Maxim 232 IC, in nice case), and Heild AD-1 adapter for use with Heil headsets. The radio, mic, and computer interface are in very good condition, works fine, no scratches or dings, non-smoking environment. With original manuals and original box. $1000 shipped. I will consider selling these items separately.

Timewave DSP-59+ audio digital signal processor - I bought this new and it has worked with no problems since. It works very well with the TS-850. Very good condition, works fine, no scratches or dings. With original manual. $110 shipped.

Electrovoice 641 microphone - A great mic for boatanchors. In very good condition, includes stand with PTT switch, wired with 2-pin microphone connecter (easily rewired if needed). $6o shipped

Kenwood R-599A receiver - Good condition, some minor wear, works fine, with photocopy manual. $115 shipped.

Kenwood TH-215A 2-meter FM HT - Good condition, works fine, with original manual, original charger (original battery is included, but is dead), aftermarket W&W hi-capacity battery and drop-in charger. $75 shipped

Radio Shack HTX-202 2-meter FM HT - Very good condition. I bought this new several years ago. Works fine, no scratches or dings, includes original manual, NiCd battery, and charger. $75 shipped

Vibroplex Original semiautomatic key - Very good condition, works fine, no dings or scratches. I bought this new in 1988. $70 shipped

Realistic Pro-25 scanner - Very good condition, works fine, no dings or scratches. $35 shipped.

Hewlett-Packard HP41CX calculator, with magnetic card reader, Advantage module, original manuals and boxes, and several additional books on the HP41. $350 shipped.

All items will be carefully packaged and shipped via UPS ground. Payment by USPS money order or personal check (personal checks must clear before shipping).

73,
Jeff Kilgore, KC1MK

2149. Looking for Tube EBL/1

Dear OMs:

I'm looking for a late '30s early '40s old radio receiver a tube EBL/1 in red.

As long as I know is an European tube red cloured with 8 points for connection.

If you have any information or store, shop or place where to find it I will apreciate that information.

I've been pleased with the 444D mated with my Kenwood TS-430S.
Although it works on both the HI and LO impedence setting, people
tell me that LO sounds better.

You can pull down the user's guide (in PDF) from

http://www.shure.com/datasheets/guides-discontinued.html

you'll see that the frequency response accentuates the highs and
is tailered for speech intelligibility rather than delivering a
studio sound. I think it performs its stated job well, although
this may or may not be what you are looking for.

So I guess you will put up a free web site, with no ads, that competes
with qrz.com, right? Then everyone will use your free web site, since
there is no chance at all that you would sell information, carry ads, or
do anything other than pay for it out of your own pocket.

What's the URL for your free web site?
Or do you just have fun posting these ignorant and silly complaints?
Whine, whine, but you fail to provide the obvious solution.

I have used the 444D on the 930, 940, and 950 and have always had good reports on my audio. These Kenwoods sound good with any mic, but the 444 performs with the best of mics. I considered replacing the element with a Heil element, but everyone I have talked to on the air said I would not be gaining anything. Go ahead and use that microphone.

2173. 2m all-mode to trade

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-05 06:24:34 UTC
From: Max <ve3tmt@rac.ca>
Message-ID: <LSo39.1532$Xf7.313167@news20.bellglobal.com>
Source record: 40733

Kenwood TS711A 2m all-mode

I picked this radio up off eBay a few months ago, but have not really had the time to get into 2m weak signal modes. You can see my original bid/purchase by clicking here:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1355765362&rd=1
The radio is still in the same condition it was when I bought it, and comes with the owners & service manuals. Has internal power supply. A great radio, but I'm only using it on the local FM repeaters. I would like to trade it for a small HF rig, such as the Icom 718, 706 or similar (doesn't have to be Icom). I can make a small cash adjustment if need be. If you have been looking to get into 2m SSB this is a great radio to start with. It is an older model but as you can see by the eBay photos it is in excellent shape cosmetically and operational wise. Will sell for $450 US if no takers on the trade.

Thanks for looking,

Max

2174. Re: IC-271A Question - setting tones

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-05 07:26:07 UTC
From: Dave Nissen <mcsok9@winco.net>
Message-ID: <ail9s3$5s1p$1@news3.infoave.net>
Source record: 40734

The ICOM used a number to indicate the tone, rather than use the actual tone number itself. The manual has a chart of the tones and the corresponding number. I have it here if you would like as lighting took my radio from me.

I tried to respond directly, but the address is rejected..

If you're looking to hook up a new microphone to the radio, you might want to consider buying Yaesu part number CT-69. It's an 8pin to modular adapater, so you can hook up an 8 pin micorphone to the radio. Sorry, I don't have the pinout for the modular adapter. I'd recommend going to Yaesu's website and emailing tech support or calling them directly.

Have an HTX-202 with standard battery pack (I just rebuilt with all new cells), alkaline pack (With 1600mAh NIMH batteries), dual band HT antenna, copy of the manual downloaded from the Radio Shack website, Radio Shack speaker/mic, and handstrap. Sorry, no original box. Cosmetically, shows little wear, makes 3 watts on battery, 6 on 12 Volt. Don't have the original charger, but I do have one that works fine. Asking $100. 73/Mark/W4KSR

2182. FS Ten-Tec #1320 20 meter QRP unfinished kit

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-05 15:33:31 UTC
From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <fVw39.14654$cl.1136259@newsread2.prod.itd.earthlink.net>
Source record: 40743

I have FS a new Ten-Tec #1320 QRP 20 meter transceiver. It is an unfinished kit, about three quarters built. It is complete with all remaining parts and cabinet, and it includes the original manual and construction instructions. The work already completed is of high quality.It would make a nice QRP rig with little work to finish it
Ten-Tec still sells these kits for $95 last I checked. I will sell this one for $55 plus shipping from 79602. Thanks, Charlie Hugg, K5MBX

2183. Re: Shure 444D on TS-930S?

From: JB <ac6tk@nospamcybertime.net>
Message-ID: <aim7at$9fm$1@madmax.keyway.net>
Source record: 40744

The 444 has quite a bit of presence with no distortion. Not a lot of base,
but sounds really clean. I have one on a TS-830, and it is distinctive.
The mic was designed for office paging.

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-05 16:16:22 UTC
From: JB <ac6tk@nospamcybertime.net>
Message-ID: <aim8d0$a31$1@madmax.keyway.net>
Source record: 40745

I have a Syntor SRA on 440 that is useless here in So. CA since the band
plan changed to 20 KHz channel spacing. They could only go 12.5 or 25.
It has a 16 ch head from a later model Syntor though. When programmed
normally, channel 1 falls on mode 2 on up, and channel 16 falls on mode 1
on the head. If you were programming from scratch it could be corrected
there, but if you do a search, you can find some astounding EEprom updates
that would leave your 16 ch idea way behind. You can make your own
head with BCD thumbwheels and go fully programmable.

I like the SRA model because it has the helical RF deck like the Mitrek.
It uses the Micor cable.

Source record: 40603

I have a very nice, seldom used, Kenwood TS-780 Dual Band VHF/UHF All Mode Transceiver For Sale. It covers 144 to 148 MHz and 430 to 440 MHz in SSB, CW, and FM. It has a built in AC power supply and it also operates off 12 Volts DC with an optional DC plug and cord (not included). It produces 10 watts output and has lots of features such as Vox, Digital Display, Repeater Off-Sets, Dual VFOs, 10 Memory Channels, Memory Scan, Battery Backup for the Memories and VFOs. This transceiver also has the optional TU-4C Tone Board installed. It provides one programmable tone for UHF and one for VHF. It has all 37 Standard Tones available, but has to be programmed using small DIN switches and only one tone for each band can be programmed at a time. That is the only thing that I don't like about this radio. It is very well constructed by Kenwood in the mid 1980s. It comes with the original manual, AC Power Cord, and the matching optional Kenwood up/down Hand Mic.It works very well in all modes. If you don't need all of the features of the newer, more expensive Kenwood TS-790, this rig is a great buy. I am asking $550 plus shipping from 79602. Thanks, Charlie Hugg, K5MBX.

2203. FS: ICOM 728 HF Rig

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-10 10:39:01 UTC
From: WZ1U <Wz1u@attbi.com>
Message-ID: <erq9lu0bl9skdrhv84jtv0fvsfoc13009j@4ax.com>
Source record: 40614

I have for sale in very good condition an ICOM 728 HF mobile rig. The front face has some wear around the microphone jack, PBT knob and some along the top bezel. The covers are mint with no marks, scratches etc. Its in 100% operating condition and puts out 100 watts from 10 to 160 meters including the WARC bands. It does not have the AM/FM board. I have the original box, manual, dc power cable and ICOM hand microphone. I will take $300 plus shipping. I can be reached at (508) 821-2993 or email.

2204. 603 beam and tower 4sale

Message-ID: <e9d3dd29.0208100633.456e3b80@posting.google.com>
Source record: 40618

Maybe you can tell me why the fans turn-on with no pattern. What I
mean is that the fan to the left, looking from the front will turn on
(the one that makes noise) when the radio is cold and I transmit, or
maybe not. It has no set pattern to when it will be on. The radio can
be very warm, or cold and it might, or might not come on. Since I can
find no logical reason for this, I have to assume that it should not
work this way.

I will loosen the screws a litle to see if the fan stops making that
slight clicking sound.

2208. Lodestar 330 HFthru VHF-UHF meter

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-10 16:11:25 UTC
From: Dave <KG4KOX@direcpc.com>
Message-ID: <dXa59.8969$u7.712862@news.direcpc.com>
Source record: 40619

I came across a Lodestar 330 HFthru VHF-UHF meter at a small hamfest here in Florida.
I have no manual, I also found that it didn't work as was said.
I need any information for this SWR/WATT meter I can get.
tnx
Dave

2209. Re: WTB Heathkit signal tracer

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-10 16:25:02 UTC
From: ibgerg@msn.com
Message-ID: <81c58e07.0208100825.7994df79@posting.google.com>
Source record: 40620
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono,rec.radio.amateur.equipment

David,

I know you specified "Heathkit", but if that's not a requirement,
you might broaden your search to other makes. EICO made a number of
models: 147A is very popular (for good reason) and always on eBay.
The PACO Z-80 is similar, but harder to find. I'm sure there are
other examples.

Greg

2210. Looking for Heath HM-9 info - decent QRP wattmeter?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-10 17:13:52 UTC
From: Mike AB7RU <mparkes@nospamatt.net>
Message-ID: <100820021013557612%mparkes@nospamatt.net>
Source record: 40621

Is the Heathkit HM-9 a decent qrp wattmeter? It appears to measure HF
on 2 scales either 5 watts or 50 watts - wonder if anyone has any
feedback on this unit, if its reasonable accurate, maybe how to
calibrate it?
Thanks
Mike AB7RU

2215. Need part number for IC-28H volume-on/off assembly

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-10 23:39:35 UTC
From: jeff <wd4nmq@earthlink.net>
Message-ID: <3D55A4E5.5080901@earthlink.net>
Source record: 40626

My club has an Icom IC-28H 2 meter rig that has a bad volume control pot. You know makes all kinds of racket when turning and has dead spots and you have to put pressure on it to get it to work.

This assembly also has the attached push on/off switch on it and is soldered on to a small PC board. Even the inertface wires are soldered on the board. We can not find the schematics or parts list in the club files..

Can anybody help in suppling that part number? Or a scan of the parts list?

Thanks for the info. I actually have an EICO model 147A(I think) that
I am slowly restoring. It was a bit beat up. I reversed the black
flocked screen speaker grill and that part looks like new. The filters
are bad and I'm swapping those out. Eye tube works great. Eventually
I'll finish it up. Was PACO another brand that was inexpensive but
acceptable quality? I've seen that name around in the past but have
not known much about it.

2217. Re: Gummymint Endorses Yaesu?

Source record: 40628

: Unless this a complete hoax or hype, some installer or field tech
: probably shot off his mouth about his favorite ham rig, and the
: FEDs made the leap to light speed on the assumption that what's
: good enough for some kid ham, is most appropriate for their use...
: the case of a little bit of knowledge and whole lot of assumption.
:
: Case in point: I have an FT-530. Great dual-band rig. However,
: in testing of the antenna which works very well for both the 2m
: and 440 ham bands, it is extremely sharply tuned and becomes
: completely worthless just 2 MHz out of band. I suspect that
: the extremely wide range and spread of frequencies to contend
: with in public service, result in ever greater compromises in
: antenna performance.
:
: Consider that the ham bands are very narrow and closely related
: in order to limit harmonic interference to other services.
:
: Still I have had Police officers with their hand on their guns ask
: if they could buy one. To their credit, I have not been shot in
: the back or in the head, and I have not been abused under their
: control.

We have a number of hams who work in my
agency. Everyone is using VX-5R that have
been taken out of band via EVE. What the problem
is that most local agencies (police, fire and such)
are still on single channel VHF HI so the state
and federal agencies have to purchase radios that
can communicate with them. What we are going
to do is buy a lot of Pryme radios (type accepted)
for that band. Cheaper and legal as well.

In time most agencies will move over to 800 Mhz
trunked radios. Then federal, local and state agencies
will be able to cross communicate.

From: jeff <wd4nmq@earthlink.net>
Message-ID: <3D55EDAE.1060208@earthlink.net>
Source record: 40633

It's not really all that common a part. Like I said, not only is it a
combo pot with push on/push off switch. But, it is only about 3/8"
SQUARE. I had found one in Mouser that was close it seemed. 9mm (~3/8)
with SPST 12vdc@3Amp, which is close for a 45 Wat rig. But, it does not
mention if it is push on/off or full counter clockwise rotation. Also,
it has a smooth shaft. Not knurled like Icom's so knob want fit right.
Like I said, it is a club rig. Their paying for the part, so put the
exact right one in it.

2236. ICOM and PCR-1000

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-11 14:04:41 UTC
From: "Jeff W." <jjweinb@earthlink.net>
Message-ID: <Z9u59.4$MT4.23414@news.uswest.net>
Source record: 40647

OK, maybe I'm missing something here, and someone wiser than me can pass on the answer to this question.

Beginning this month, the standard ICOM ads have changed. You know the ones, the 'Tune In The World With ICOM' one pagers that generally can be found on the backs of magazines like Monitoring Times, etc. Well, this month, associated with the IC-PCR1000 unit, there is new text that says "New Software - Works with All Versions of Windows!"

OK, so where is it? I've been to www.icomamerica.com, but no luck. At least not on the pages that I've been able to find. What I have been able to find as a download is the old version, and a note that the ICOM PCR-1000 software is only available for Windows versions 3.1 and 95, and recommended links to third party software that does work with other versions of Windows. Since converting my system to Windows XP Pro recently, I haven't been able to get my PCR-1000 working, simply because the old program tries to access the COMM port directly, and locks up as soon as it does. So, if the ad is correct, ICOM now has a version of their software that should solve this problem.

Only, does anyone know where it is? Plus, any recommendations on other vendor software that will work on a Windows XP system, that you like, and was fairly priced.

Please respond here and to jjweinb@earthlink.net.

Thanks.

Jeff W.

2238. Wireless thermometer 433 MHz

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-11 15:52:04 UTC
From: Roger Halstead <rdhalste@tm.net>
Message-ID: <EKv59.2181$tl4.957753@monger.newsread.com>
Source record: 40549

I needed a thermometer for my shop and was amazed at the wide variety of offereings.

I found a nice digital that allowed me to put the sensors (up to 4) up to 100 feet away. The thing would have been great as it would have allowed me to read the temp in the shop, the garage and a couple places around the yard.

As I was headed out the door, reading about it I saw discovered the operating frequency. The thing was operating on 433 MHz. (give or take a tad).

As I operate across the entire 440 band I turned around, took it back, and purchased one with a lead to the outside thermocouple. Actually it's a pretty short lead.

What kind of signal do these put out? (Narrow or broad) what's it sound like, and how well would it work within a hundred feet of a 440 station running several hundred watts. How close could my receiver be to in frequency wise before it'd start desensing the receiver.

I would think if someone next to the repeater set one of these things up there would be a problem, but I don't know that much about them.

Hello,
2 hours ago my VX-5r was working great, then after a lunch at Ruby Tuesday's, I pulled the radio off my belt, and the display was blank, allthough the radio was ON. All functions of the radio work fine, I am still able to transmit and receive on the memories I had stored, but there is still absolutely nothing on the display. I went into the menu blindly and tried to turn up the contrast, but that didn't do anything, and I tried the display test mode, and that didn't do anything either. has anyone else experienced this problem?

thanks in advance for any help...
KF4AON

I have the following equipment for sale (I need to clear some space, and help pay for an IC-756Pro II).

Kenwood TS-850S/AT - I bought this new in 1994 and have used it for my main rig since then. It has INRAD 400-Hz filters in the 8.83-Mhz and 455-kHz IFs, and comes with a Kenwood MC-50 microphone and homebrew computer interface (uses Maxim 232 IC, in nice case). The radio, mic, and computer interface are in very good condition, works fine, no scratches or dings, non-smoking environment. With original manuals and original box. $875 shipped

Electrovoice 641 microphone - A great mic for boatanchors. In very good condition, includes stand with PTT switch, wired with 2-pin microphone connecter (easily rewired if needed). $50 shipped

Kenwood R-599A receiver - Good condition, some minor wear, works fine, with photocopy manual. $105 shipped

Kenwood TH-215A 2-meter FM HT - Good condition, works fine, with original manual, original charger (original battery is included, but is dead), original box, aftermarket W&W hi-capacity battery and drop-in charger. $70 shipped

Radio Shack HTX-202 2-meter FM HT - Very good condition. I bought this new several years ago. Works fine, no scratches or dings, includes original manual, NiCd battery, and charger. $70 shipped

Vibroplex Original semiautomatic key - Very good condition, works fine, no dings or scratches. I bought this new in 1988. $60 shipped

Hewlett-Packard HP41CX calculator, with magnetic card reader, Advantage module, original manuals and boxes, and several additional books on the HP41. $275 shipped

All items will be carefully packaged. Payment by USPS money order, PayPal, or personal check (personal checks must clear before shipping).

73,
Jeff Kilgore, KC1MK

What make/model was this? It sounded like RadioShack's 63-1027, but reading all that I could find on it only showed that it was a "Class B digital device as specified in Part 15 of FCC Rules."

Perhaps 433MHz was a harmonic?

The one I have operates at 433 MHz as well. I don't seem to get a great deal of interference from it. In fact, I have to practically have the thing connected to my rig to find the frequency.

David,

I can't tell you much about PACO except by observation of the Z-80 I acquired. Seems newer then my 147A; but the PACO is almost mint compared to an average EICO, so it might be misleading. Quality is similar to EICO, Heathkit, et al. I would have to call it a functional copy of the 147A. I think the Z-80 is much less common.

Get your 147A working.... you'll be happy with it. I too reversed the speaker grill (how many times will that trick work?), tested the tubes, shot the controls with cleaner and had a working unit except for the watt "meter". After correcting a wiring error, it worked but read low. After much head scratching, I tested the diode involved and found that it was silicon. Replacing it with a 1N34A made everything right again.

These things were built by who knows, with variable skills, and have a long and unknown history. I guess it's not real surprising they might need a little help in coming back to life.

As you probably know the paperwork for the 147A is online; a decided atvantage for the more common brands. And be careful with the "noise" function.... I haven't used it much myself, but hear it's very useful. It won't kill you (very low current) but could give a nasty surprise (~130 VAC).

Hi all,

Has anyone tried to work a TH D7 TNC with W2K as operating system on the computer ?
I always receive "Communication timeout error" as message. The comport is OK, I use it to connect to my TM D700. I've tried different control applications (link 7, MCP D7 v1.2, ...) but the message is always the same. I tried every setting I could think of ...

Any suggestions ?

Since I doubt that the receiver is that much more sensitive then your rig (we would hope!), that suggests it runs in some kind of broad band mode or different frequency and it's just a harmonic or some small part of the signal that shows up there.

It would be interesting to see just how it does run. Maybe it's just a very brief burst.

As far as I know, while they operate in the same frequency band,
800MHz trunking radios are separate from cell phone systems. Cell
phones usually have better coverage but would be subject to overload.

I have used a wireless indoor / outdoor thermometer from Radio Shack for over a couple years now and they are great. So cool we sent one to my dad and he really enjoys it too especially since the display is so large he can easily read it from across the room and he is nearly 80 years young.

Here is what mine looks like and also there is a link for the operators manual with tech specs for this model which include operating frequency etc.....

I have strange output power shifts on my YAESU FT 707S: it happens only with SSB, and obliged me to retune the mike gain all the time or so...

I cleaned the relay of the IF and AF boards but no results.

Any ideas ?

73 from TK5ML.

2284. Kenwood Tm-221 mic connector, need special tool

HI folks,

THanks for the responses on the lithium battery replacement. NOW that I've got the instructions I see what was apparent before but now obvious.

Anybody know where the heck to get the special tool I need to remove the microphone connector?

THanks and 73 de kb0ruu

Trunked Radio systems aren't part of the regular cellular network.

In SLC, most of our public agencies have switched to a 800Mhz SmartZone
Trunked system which ties together some 25 radio sites. Most of the agencies
can talk to each other when needed.
The state of Utah decided to implement this system after a tornado caused
major damage back in 1998. It was really bad. None of the agencies could
talk to each other and the govenor's cell phone didn't work due to overload
of the system.

Just use two small drill bits or jewelers screwdrivers and a suitable cross bar if you do not have a spanner type wrench for the nut on the mic connector.
The torque should not be very high on it anyway and there is no lock-tite used on it when it is assembled originally.

2290. HT Recommendations Wanted

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-13 03:30:12 UTC
From: Kirk Crawford <kirkcrawford@adelphia.net>
Message-ID: <83%59.1219$9U6.1380551@news3.news.adelphia.net>
Source record: 40451

I would like some recommendations on what HT to buy for an upcoming trip. My wife and I are going on a year long Round-The-World trip starting at the end of September. We will be traveling lite, each carrying just one backpack. We will be staying in hostels and camping out. We won't be carrying a cell phone. However we are now both HAMs (passed the test 8/8/02) and would like to carry two HT's with us so we could communicate with each other and with other local HAM's on the local repeaters. We won't have ready access to power from the wall or from a car, so the HT must be able to work from regular Alkaline batteries. Also it needs to be powerfull enough to hit a repeater, so 5 Watts is minimum output power. Weight is also a consideration because we will be carrying them on our backs for a year. We also want the tone-coded squelch feature so we can set it up to only receive from each other. And 2 Meters is all we need and is the most popular band worldwide. Low cost is good too since it is a distinct possibility that we could be robbed.

So, considering all that, I have found the ICOM IC-T2H, and the ALINCO DJ-195T. Both around $100 and fit most of the bill. I have a few questions for the more experienced Hams out there.
Does the Alinco work from Alkaline batteries as well?

Do you have any other recommendations for a good HT to fit our trip?

Do you have any comments on either of these two radios?

Thanks in Advance,

Kirk Crawford

My ancient MFJ-1270 "no bloody A, B, C, or D" gets that way sometimes
when I haven't powered it up for some time. I know the baud rate (set
by DIP switch on the back), but it usually takes me some time to get the
word length/parity/stop bits set right.

And I normally forget about the 2 stop bits!

Kirk,

One thing you should know is that many countries around the world carry no reciprocity for amateur radio operators from other countries. For instance, here in Korea, you must file for a personal license, and a station license. The process is pretty straightforward for most hams, but it does include filing the paperwork, having the Ministry of Information and Communications come and check your gear and antenna for spectral purity (with a spectrum analyzer) and the payment of a fee of 100,000 Won (about $85). Most other countries have a similar system. Some do not allow hams from other countries to operate in their country at all, and to do so carries stiff fines or jail sentences (Thailand is one of these).

Just a note of caution.

If the application you are trying to use for TNC control is trying to
directly access the hardware port, then it won't work. W2K, like any
version of NT, is a protected kernel OS. Any app that needs hardware access
must request it via an OS API call.

Good call, Dick. Here in Korea one can buy used cell phones for a few dollars (about $40), and a card to activate them for 10,000 Won (about $8.50), and the phone will work almost anywhere in the country for a flat fee deducted from the card. You can even use the same card to call overseas (to the US it's about 28 cents a minute), or buy an overseas card (such cards can be gotten for around 4 cents a minute to the US, 10 cents a minute cards are common).

I just recently bought my first PC that had XP Pro (Gateway 600X laptop) and I have no problem running the old (rev 1.31) version of the Icom software. I also use Scan Star Spectrum Explorer ver. 8.35 and that works just fine with XP. The only problem I've had with Icom's software was with one of my older laptops (a Compaq Presario 305 with Win 98). That machine would work ok until I tried to scan. It would start scanning and just stop. This seems to be some sort of hardware problem with just that computer. None of my other machines past or present suffer that problem. As for any new versions of Icom's software, I haven't seen anything. Let's hope if they really have an update, they not only fixed any Win 2000 / XP incompatibilities, but also fixed the "Icom Scanning Problem" so you can scan more than one bank. Good luck.

I have the T2H. The body is really rugged plastic of some sort -- should stand up to hard travel. Uses alkalines or the standard Ni-Cads that mine came with. (It's the Sport model that comes with no batteries). Has the tone squelch. Not sure if it has the full 6 watt output with drug-store alkalines.

It's cheap enough, you could lose it or have it confiscated and it's no big loss. Whatever you do, don't lose the instructions/manual, as it is very non-intuitive in its programming and set-up. It took me two or three weeks, initially, to get all the local repeaters programmed in, with the correct tones.

I've never used mine with alkalines, but it could go through a whole set in one day's use -- that's 8 AA cells per radio. Alkalines could get expensive. The standard rechargeable Ni-cads, or the optional hi-power battery pack might a better way to go.

It has pretty natural transmit audio.

It isn't very resistant to intermod.

I can't speak to the international regulations regarding its use by US hams. That may be the main problem.

Message-ID: <v1969.1232$9U6.1460386@news3.news.adelphia.net>
Source record: 40463

I am aware of the regulations for using HAM radios in other countries and have been researching that aspect through ARRL's web site.

We don't really want to get cell phones as it can be expensive having to buy phones and plans in multiple countries along the way. And useage of the phone is expensive. For our phone usage we will rely on calling cards that can be purchased in nearly every post office around the world. Remember, we aren't just going to one region or country. We will start in New Zealand, and then follow to Australia, Malaysia Phillipines, Taiwan, Vietnam, India, South Africa, Nigeria, Europe, and then home to USA.

The idea of an inexpensive 2 meter rig will help if it gets stolen or confiscated then we just replace them in the next ham friendly country.

So, Any other suggestions for radios or comments about the ICom IC-T2H or the Alinco DJ-195/196?

Thanks In Advance,

Kirk

>We will start in New Zealand,
>and then follow to Australia, Malaysia Phillipines, Taiwan, Vietnam, India,
>South Africa, Nigeria, Europe, and then home to USA.

Nigeria?? You WANT to go to Nigeria? Try Kenya, Cote d'Ivorie or Morocco, but forget Nigeria. You'll lose the radios and most likely all your possessions. I've got lots of good friends FROM Nigeria...THEY don't want to go back. Lots of good folks, but lots of problems, too.

As for the other countries, Malaysia is very friendly but strict. The HTs probably will not pass muster. Vietnam? Supposed to go there soon for a trade show....the show promoter said to leave anything valuable at home. Not due to the people, who are great sorts....but due to Customs. Same in Phillipines and India, "lost" a laptop in Customs in the Phillipines some years ago. Haven't been to SA in years, don't know the current status.

NZ, Oz and Europe you're OK (and I'm jealous...been trying to get to NZ for years), think that SA should be a bit easier for the licence, but the others? Make sure you can hide the HT on your person and dress like someone they DON'T want to body search. Seriously, I'd avoid Nigeria. And this is from a guy that thinks Indonesia is a walk in the park, and that likes Peru & Colombia.

Hello,

This very special Siemens valve can be used as a driver for 300B and
similar. It is a pentode with a heater of 20V 0.125A, Va 225 Vg2 155V
Ia 16mA Ig2 3mA S = 6.5mA/V Wa 4W max Ik max 30mA. Loctal socket.
I have several in stock at NOK 172.- each or about $ 22.60. The are
all NOS and in original boxes. Pictures and data on my web site -
www.demostenes.no

Best regards,

Arnold Goks&#65533;yr
DEMOSTENES - N6899 Balestrand, Norway
Tlf. +47 5769 1340 Fax +47 5769 1267

Hello Walt,
That is some of the very BEST Ham Radio news I have heard in a long time Walt. Thank you for posting it. It's going to bring many more people into the ranks. It also serves to establish at long last a "no-Morse code" license (I read about the "Morse appreciation" - test -) and should go a long ways to encouraging other countries to do the same. It is long overdue. I am also thrilled to see the new and correct nomenclature of "Hobby Radio" be used. Too many Hams make radio a religion and a life's philosophy. Especially hard-core CW advocates and many DX'ers. It is a "hobby" and the UK has it nailed 100% correctly.

Moreover your advice to ignore and purposely not make contacts with any of the new license holders once they get on the air is really silly. It makes you look like an asshole and an old curmudgeon fuck dick. I hope instead the new license holders ignore "YOU". They would be far better off to do so and thus never have to meet you or hear your prejudiced views on "Hobby Radio"

Have a nice day.....

Reverse the recv and tx lines (2 & 3) on the serial interface between
the TH-D7 and the computer. These are diagrammed in a confusing way and
may be reversed.

Hyperterm should work - set 9600b. The TASCO message should come up
when you push the TNC button on the HT keypad. Be sure to push it twice
to get it out of APRS mode and into full TNC mode.

Walt I like your observation and encourage you to stand by your position on the subject. If CJ want to use that filthy language so be it but not all Americans feel the way he does. And by the way, WE don't appreciate his language or stand by his position. A person of his standing should be more adult. Shame on you AB7SL.

Yes, I'm one of those old time hams being licensed for over 35 years. I don't care for code but I refuse to limit those who enjoy that fascist of ham radio.

2311. Help FT707

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-13 22:46:01 UTC
From: bob <flobobe@plus.net>
Message-ID: <JXf69.227$sE1.36458@stones>
Source record: 40471

Hi

I've been given an FT707 which has an overheating issue on receive.

Half an hours listening on 40m produces a temperature of 49 deg C on the rear heatsink. It's also drawing 10 amps on receive which is rather excessive.

All functions otherwise seem OK. Anybody help or offer advice on this.

TIA

Bob

2312. New PCR-1000 Software

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-13 23:06:34 UTC
From: "Jeff W." <jjweinb@earthlink.net>
Message-ID: <Whg69.203$R.71243@news.uswest.net>
Source record: 40472

For those who use the Icom PCR-1000 computer controlled radio, there will be new software available soon that should run under all versions of Windows. As you may know, the current version downloadable from the Icom website is only certified to work with Windows 3.x and Windows 95. Icom parts does not yet have the new version, but when then do, the cost will be $68.73.

To me, it's disappointing that Icom sells a computer controlled radio whose software is (as noted on their website) only certified on versions of Windows that are at least 7 years old. Yes, the software did run under Windows 98 for me, but if I had had problems...

The software does not always work under newer versions of Windows, including XP. It makes you wonder if Icom will continue to sell this radio with the antiquated software, and why they can't provide an updated copy of basic control software for their registered users for more current versions of Windows. As far as I know, even WinRadio provides updates to their software so their hardware remains current with the most current OS's.

With other versions of PCR-1000 software out there that are more reasonably priced, it's MHO that Icom may find a very limited market for this new version of the PCR-1000 control program.

After occasionally tuning across the CB frequencies in an attempt to
see what people are so steadfastly defending, I have routinely heard
very little verbal exchange of ideas. Primarily I see radios being used
as a sort of cathartic tool of cowards for whipping on other anonymous
radio signals without fear of a knuckle sandwich, or even worse, a tool
for broadcasting deranged and psychotic outbursts and incomprehensible
word salads, gibberish and other exhibitions of lunacy.

Perhaps this is a local problem, in which case I apologize to those who
may have been driven off for meaningful exercise of the 1st Amendment
here, or in other areas those who have truly been able to.

Otherwise what's to "talk" to?

Source record: 40474

Thanks John. The Icom tech says that the older version of the software will run on some XP machines, but not on others. Mine just happens to be one of the ones that it won't run on. It hasn't run on my system since I first loaded XP Pro. I talked with Icom Parts today. When they have the new version of the software, the part number, according to them, will be BON-CS40, and the cost, again according to Icom parts, will be $68.73. I find it a bit annoying that a company of the stature of Icom would produce a computer controlled radio that has control software that is only certified (as per their own website) for operating versions of Windows that are at least 7 years old. It's not what you would expect from Icom.

Thanks for the info.

2315. FS: ALPHA 78FACE & COVER

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-13 23:55:03 UTC
From: rong@computer.net
Message-ID: <3d599c35.2050757@news.computer.net>
Source record: 40475

Hi All,

I just received a new face & cover for my old Alpha 78 from Crosslink. I will be installing them during my vacation over the next 2 weeks. The old face & cover have become quite sticky with age as all of the original 78's did. Is there anyone out there that wants to purchase the old cover & face ??? The lettering on the face is perfect. There are a few scratches at the top left screw hole where someone evidently had bad aim with a screwdriver, and a few chips on the edges. There might also be some rub marks under either the tune or load dials--I can't remember which one used to rub, but you can't see it with the vernier dials assembled. The cover has numerous scratches all around, but a paint job will fix that. There are NO dents in either piece. The cover should also fit the 76 series with 2 or 3 tubes and the 374A series. The only difference that I can see, is that this cover has vent holes for 3 tubes as used in the 78.

I once read somewhere that if you soak the cover & face in water overnight, the stickyness will disappear--whether that is true or not, I don't know.

If you are interested, please E-mail me at rong@computer.net or call me at work for the rest of this week from 7AM-5PM EDT at 914 769 3114. Make me an offer that I can't refuse. Crosslink charged me $21.50 for the shipping, but that included the box & packing--I assume that it will run about $12 to ship the box anywhere in the lower 48.

Thanks & 73,
****

Didn't you mean "... drunken lunacy."?
Not far from here is a large truck stop.
It's kinda fun listening to the ladies on their way to service the truckers.

2319. Henery 4K2 Amp Information?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-14 00:53:25 UTC
From: K5JOE <k5joe@k5joe.com>
Message-ID: <9Sh69.449$LG4.160457913@newssvr30.news.prodigy.com>
Source record: 40479

Looking for information on the old Henry 4K2 amp with the 5-CX 1500 tube,
floor model.
Got it in an Estate Sale and need information about the amp. Wattage,
ect..
Any help would be appreciated.
Will sell for best offer...
K5JOE
I will have it listed on my web page later in the week, with pictures.

For those into modifying their DX-394, here are two good collections of files: www.mods.dk groups.yahoo.com/group/RADIOSHACKDX394/files/

Index of www.mods.dk:
23-07-2000 Ceramic filter mod for AM English language (2 Kbytes)
23-07-2000 AGC mod English language (1 Kbytes)
23-07-2000 Crosstalk mods English language (3 Kbytes)
23-07-2000 Noise blanker mod English language (2 Kbytes)
23-07-2000 Audio HISS mod English language (1 Kbytes)
23-07-2000 Keyboard beep delete English language (0 Kbytes)
23-07-2000 Audio enhancement English language (0 Kbytes)
09-07-2002 Radio Shack DX-394 Standby Mod English language (2 Kbytes)
28-07-2002 Adding Front Panel Switches to the Radio Shack DX-394 General Coverage Receiver English language (22 Kbytes)
01-08-2002 Soup up the DX-394 Knob Pointers English language (25 Kbytes)
01-08-2002 VHF Image Filter for the DX-394 Whip Antenna English language (74 Kbytes)
03-08-2002 Shielding the DX-394 with Aluminum Foil English language (37 Kbytes)
06-08-2002 RS-232 Serial Control of DX-394 English language (214 Kbytes)
09-08-2002 Superior Shielding of the DX-394 with Steel Lids English language (51 Kbytes)
13-08-2002 Ultimate Shielding of the DX-394 English language

I think Frank Cathell authored all of the ones dated 23-07-2000 and I'm guilty of authoring or editing the rest. The following list from the Yahoo SIG duplicates much of the above as I have posted my stuff there, also. With a membership of over 140, it's the largest known group of users of this receiver although it's possible there may be more viewers of Usenet newsgroups with DX-394's.

Index of groups.yahoo.com/group/RADIOSHACKDX394/files/
DX-394_KnobPointers.htm Description of mod for white knob pointers with photo. 6 KB yah0ldena 07/28/2002
DX-394_foil.htm Instructions for improving the shielding of the DX-394 by lining the lids with aluminum foil. 7 KB yah0ldena 08/02/2002
DX-394_serial.htm Updated description and images of Russ Hellar's mods for serial control of the DX-394 by a computer. 6 KB yah0ldena 08/05/2002
DX-394_shields.htm Ultimate Shielding of the DX-394 or "The Shields that should have been" 12 KB yah0ldena 08/12/2002
DX-394_standby_mod.htm Mod to add dedicated front panel switch and/or external interface for control of STAND BY mode for ham use. 4 KB yah0ldena 08/01/2002
DX-394_steel_lid.htm Superior Shielding of the DX-394 with Steel Lids. Main

page. 6 KB yah0ldena 08/06/2002
DX-394_switches.htm Description and photo of switches and LED added to Tom Holden's DX-394A at VE3MEO 5 KB yah0ldena 07/27/2002
MainsFilterChoke.htm Add a Mains Filter Choke to your DX-394 to Reduce Ingress of Interference from the AC Power System 4 KB yah0ldena 07/27/2002
VHFimagefilter-whip.htm VHF image filter for DX-394 whip antenna - description. 34 KB yah0ldena 07/29/2002
dx-394-Schematicsb.JPG DX-394 Mechanical assembly drawing 317 KB Mister_p_1998 04/13/2002

The Yahoo site also has a discussion forum and relevant links to other sites. You have to join Yahoo and register in the group to be able to use features other than the e-mail reflector.

I have been looking at the regulations more and we may end up having someone hold our radios when we leave Oz and then ship them to us when we get to Europe because the regulations are so tough in Asia. Apparently South Africa might not be too bad. Their website link from ARRL indicates that they just joined CEPT, so it may be as easy as Europe.

2330. Help- Kenwood TH-F6 HT transmit audio problem

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-14 13:38:10 UTC
From: Ed Laughery <laughery@bellsouth.net>
Message-ID: <5Ss69.21900$g47.1160204@e3500-atl1.usenetserver.com>
Source record: 40490

Hello

I have a new TH-F6 HT (purchased at Dayton). Hasn't been dropped, exposed to weather, etc. I have started receiving reports that my audio sounds as though I am talking into a cheap crystal mike. Very bassy and weak. Hitting repeaters with plenty of power. Same problem operating Simplex, although operating thru the repeater seems to make the problem worse. Battery is fully charged. I have ran signal checks to my base station, moving the radio from directly in front and varying the distance, to moving from side to side, doesn't seem to help. Pretty much needs to be directly in front of my mouth for the internal speaker/microphone to pick up my voice. I have plugged in a Kenwood EMC-3 clip mike and ear phone. Same problem - not very rich audio.

Any clues or similar experience with this model. Have tried to call Kenwood East this morning - no one answering the phone as yet - will try west later in the day.

Any info/help is truly appreciated.

The goal is to prove myself right. I apparently haven't done that yet.
Thus, the continuing effort toward achieving that goal. Einstein thought
he was right and persevered against his detractors. You think he
was wrong for doing so?

I'm not real familiar with the 4k-2, but I'm sure it's fairly stout.
For one thing, the model number 4K usually indicates the amp will run
up to 4k watts INPUT. I would think the plate dissipation of that tube
as 1500w. It wouldn't surprise me if that amp would do a bit over 2k
output at full drive, but just guessing. It would loaf at 1500 w legal
limit. I've got a 2K classic console. That 4k-2 is a good bit stouter
than mine. "pair of 3-500's at about 3200-3400 volts". Also, I'm
guessing from that model number it's a mid 70's amp. But again, just
guessing... MK

Is this coming from people who know you? There's one guy on our group
that sounds like he has terrible audio - until you meet him in person
and find that's what he really sounds like. <gin>

It sounds like you need to send the rig in for warranty repair. I've
never heard a grip about the transmit audio in any TH-F6A group.

As one who has operated in a number of different countries, let me tell you it is never as tough as everebody says it is. In the 60's I was able to operate portable /PJ when everyone told me it couldn't be done. I had the help of a local contester PJ2CO who managed to cut a bunch of red tape and get me authorization.

With the internet, I would get hold of a club in each of the countries I was to visit and get help from that end. They can tell you how to get around most of the petty stuff.

Hang in there and enjoy yourself, disregard the doom and gloom of all the naysayers and just go for it!

73 and good luck

2340. Re: Kenwood TH D7 TNC and windows 2000.

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-14 20:55:17 UTC
From: Edwin Alexander <edwin@cox-internet.com>
Message-ID: <ullgtlcr9aeef8@corp.supernews.com>
Source record: 40501
Cross-posted to:
alt.ham-radio.vhf-uhf,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.misc,uk.radio.amateur

My elmer has a problem with a computer application (a TNC programmer) trying to directly access the hardware in his Windows-based system (a serial port), and we solved the problem by creating a DOS boot disk. Also, if you run Win95, Win98, or WinME then you can boot into "Command Prompt Only" mode. I'm unsure as to whether Win2000 or WinXP has this feature, despite the fact that I use XP myself. Just never checked, I guess.

If you run Win2000 or WinXP, just create a boot floppy for another operating system. If you have FAT16-formatted partitions on your hard drive then DOS on a floppy should be able to recognize them, possibly with the use of some device drivers in a config.sys file.

Incidentally, I'm not certain if Mr Reay was well-intentioned or sarcastic, but it's quite obvious what the original poster meant. Anyone current with HTs would recognize a THD7 as a rather nice Kenwood handie-talkie, and a TNC should be obvious as a terminal node controller to any licensed ham.

Hope the alternate solution helps you out!

Regards,
Edwin Alexander KS5D

No, I believe it is a "Taylor" and they are sold by the Ace Hardware chain.
the 433 MHz is "listed" as the operating frequency. They are limited range
devices (100 feet or so) and are legal near as I can tell.

> many DX'ers. It is a "hobby" and the UK has it nailed 100% correctly.

To me Amateur Radio is a hobby, but to the FCC it is listed as a service, just as broadcast radio. I chase severe storms and work the weather nets which is providing a service, but to me it's still a hobby as I do it for fun. (I've also seen 5 tornados) I don't care if the individual spends time on CW, digital, TV, shooting the breeze, better known as BSing, or just listening. I don't care if they can copy 40 WPM, or just recognize that afful sound is CW. However, I will confess to setting the rig out in the shop to W1AW and listening to high speed code practice while building an airplane.

The ones in here are set up with the computers for storm chasing, logging, and DXing.

However if you take the word Amateur which is derived from Latin meaning one who does something for the love of doing it and add a Noun such as Radio, then it becomes one who does radio for the love of doing it. (rough translation)

As long as the government keeps treating us as a service we are in a far better position to counter (protect our frequencies from) other groups who would like the frequencies for their own. I would not like to see the word hobby replace the word service as here in the states it would cost us dearly.

Calling the Amateur Radio Service a Hobby would set a dangerous precident in protecting our frequencies at a time when great strides are being made to protect our ability to erect antennas and stations.

BTW, the antenna system here was put up entirely by hand with me doing "all" the climbing. The only place machinery was used was in digging the guy anchor holes and setting the 300# plus guy anchors in those holes. And, yes they did deliver the concrete with a truck. <:-))
http://www.rogerhalstead.com/tower.htm Even with most of the pictures being small links, the page takes a while to load. There's a lot there.

Even though I did all the climbing for erecting the tower and antennas (at my age), my wife put her foot down and said no more climbing for the younger guys. Besides it's time I can devote to building that 335 MPH aerobatic

hotrod. <:-)) Yes, there is a page for it too.

BTW, I spend very little time on the air. Too many fun things to do. (and not enough money)

2345. Low power FM Transmitter?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-14 22:17:21 UTC
From: Kirk_ <kirk@1st.net>
Message-ID: <RFA69.6$73.40@news>
Source record: 40506

I have a business with two or three buildings close and some outdoor spaces where I would like to provide "Background Music". I was thinking that an FM Transmitter with a range of about 1/4 mile would be perfect for this.

I have been looking on the internet and have found some transmitters, but can't quite figure out what FCC rules would apply.

I have been looking at some FM Transmitters on a hobbytron.com. They have a link to the FCC website, but it isn't very helpful because I can't find anything there about this type of radio. All I can find there is about LPFM.

Here are the ones that I have looked at:

25mW FM Stereo Transmitter http://www.hobbytron.net/product534.html
FM25B Synthesized FM Stereo Transmitter
http://www.hobbytron.net/R-FM25.html

I have no clue which of these would be better for my needs and what kind of FCC rules I would have to comply with.

BTW, my nearest neighbor is over a mile away.

Thanks,

Kirk

Originally, heath suggested transformer oil, with mineral oil as a
substitute.
Lower rating with mineral oil.
In fact, it showed the rating curves for both on the side of the can.

I have a lots of cable for sale

Belden 9913
Equivalent to belden 9913
RG8X
All kind of other coax cables and much more....

In Montreal, Canada, can ship anywhere in North America

Email me with any request you have, I have access to anything at a very very
low price

Thanks
Nad

2351. Alinco Mic wiring 8 pin with color

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-15 00:43:01 UTC
From: massimj@hotmail.com
Message-ID: <e9d3dd29.0208141643.6d363ca5@posting.google.com>
Source record: 40511

I was searching for this in the groups and had a hard time finding it, so here is the pin wiring of a Alinco 8 pin mic. The color code I used is from my DR-600 Mic.

1 = Mic Audio - Yellow You will know this one because it is shielded.
2 = PTT - Orange
3 = Down - White
4 = Up - Green
5 = DC 5V - Red
6 = ? Purple
7 = Ground - Black
8 = Center Pin - Gray, or shield from Audio Pin 1

I hope this helps somebody in desperate need to get their mic wired. I had several pins come off all at once, so it was a little bit hit and miss to get it right.

Joe KQ4BX

2352. Lawyer: Amateur Radio is not a Service and Ham must pay.

Letter from Hollingsworth smacking down a Corporate
Lawyer trying to make a Ham pay to fix an interference
problem. It is probably costing this corporation
more to send letters back and forth to the FCC
then it is to relocate the transformer.

August 9, 2002

Michael C. Massengale, Esquire
Baker Botts, LLP
One Shell Plaza
910 Louisiana
Houston, TX 77002-4995

Re: Reliant Energy, Incorporated; Radio Frequency
Interference to Amateur Radio Station W5GCX

Dear Mr. Massengale:

This is in response to your letter of June 28, 2002, on behalf of Reliant Energy, with respect to radio frequency interference from the operation of the company's electrical service equipment to Amateur Radio operators.

The Enforcement Bureau appreciates your comprehensive response. However, your interpretation of applicable Commission rules with respect to this matter is in error in several material respects. Reliant Energy is obligated to eliminate the interference complained of.

Your letter suggests that the interference experienced by Mr. Edward J. Gerber is due to an otherwise properly operating 250 kVA step-down transformer. Reliant's proposed solution is to relocate the transformer to another area removed from Mr. Gerber's residence, and that Mr. Gerber bear the labor cost of this relocation.

We are willing to accept your client's analysis that the transformer is the cause of the interference problem; but that is most unusual, since an arc in a transformer would typically result in failure of the transformer within a short period of time. A far more typical cause of radio interference from utility lines is in loose or corroded hardware, tie-wires, or defective insulators. Furthermore, you cite use of infrared cameras to locate hot spots as a means of identifying noise sources. The small arcs which cause RF interference typically do not cause significant heating, and therefore this may not be the most effective means of diagnosing interference problems. Finally, it is unnecessary in most cases to interrupt the power as a means of identifying the source of noise.

Regardless of the source of the interference, it is improper to attempt to pass the cost of the relocation, or other solution, to the licensee that is the victim of the interference. It is exclusively the obligation of the operator of the unlicensed device. Your interpretation of Reliant's obligation with respect to the Amateur Radio Service is that Amateur stations are not part of any "service", and that the obligation to avoid interference to a "radiocommunication service" does not include Amateur Radio stations, since individual Amateur Radio stations constitute a "use" but not a "service".

The attempted distinction is baseless. The Amateur Service is "a radiocommunication service for the purpose of self-training, intercommunication and technical investigations carried out by amateurs; that is, duly authorized persons interested in radio technique solely with a personal aim and without pecuniary interest." 47 C.F.R. ï¿½97.3(a)(5). Individual licensed stations are each part of this Service. The condition of operation of any Part 15 unlicensed device is that it cannot cause harmful interference. 47 C.F.R. ï¿½15.5(b). Harmful interference, which is identically defined in both the Commission's rules and the International Radio Regulations, includes any emission, radiation or induction which seriously degrades, obstructs or repeatedly interrupts a radiocommunications service operating in accordance with Title 47 C.F.R. Reliant Energy is not entitled to cause harmful interference to a licensed Amateur Radio station in the operation of its devices.

Furthermore, you claim that, since 47 C.F.R. ï¿½15.13 requires that manufacturers employ good engineering practices to minimize risk of harmful interference, that provision does not apply to Reliant Energy. However, 47 C.F.R. ï¿½15.15(b) makes it clear that operators of Part 15 devices are required to cease operation should harmful interference occur to authorized users of the radio frequency spectrum, and therefore parties responsible for equipment compliance should reduce unwanted emissions below the maximum levels specified in the regulations.

Therefore, the position of Reliant Energy, that it is willing to conduct further investigations or remedy the interference problem only if the licensed radio amateur pays its expenses, is unacceptable. Reliant must do all things necessary, and bear any and all necessary costs, to comply with its obligations as an operator of unlicensed devices pursuant to the Commission's Part 15 regulations. You are hereby requested to provide a written report within 30 days of receipt of this letter as to the steps that have been taken to eliminate this interference. Further enforcement action will be withheld pending receipt of that report. The Commission expects, however, a complete solution without further delay, and good faith on the part of your client.

Factory assembled RCA WV-98C. One of the most popular bench VTVM's made. Switching probe is included, but it is NOT the original RCA probe. Simpson battery eliminator installed. Has three wire power cord and an access hole for the AC zero pot in the back. Very good condition, calibrated August 2002. Original manual included.

$50 plus USPS priority mail fee.

You might check your cabling -- a simple test would be to insert a null
modem adapter between your serial cable and the TH-D7.

Look up Part 15 rules on the FCC website. Basically, if it can be heard outside your home/building, it's illegal. AM is a bit more open, you could possibly cover 1/4 mile legally on AM, but you are limited to a total antenna length of something like 10 feet.

> directly access the hardware port, then it won't work. W2K, like any
> version of NT, is a protected kernel OS. Any app that needs hardware
access
> must request it via an OS API call.

As you say, you cannot write a Win32 application for use in NT/2K/XP which will successfully write directly to a hardware port (x86 IN and OUT instructions) in user mode. It will generate an exception.

If the application is an MS-DOS app, under NT, 2000 and XP the UART IN/OUT instructions are intercepted with a trap and have code to attempt to re-emulate the COM port using a Virtual Device Driver (not to be confused with VXD which is a Win 3.x, 9x & ME term). Works sometimes, not others, in particular regarding heavily used interrupt driven applications as these can often be timing sensitive: these traps are expensive in CPU terms.

It will even let some MS-DOS programs access a USB Serial port if you're really lucky.

Windows 3.x [enhanced mode], 9x & ME use a different method and simply map most I/O reads & writes straight through to the hardware.

As an example, I often use the InstantTune Doppler correction facility which is a DOS TSR under Windows 2000 and this works fairly well.

I'd suggest that either the cable isn't right or a handshake line at the PC end isn't properly connected. Either way, the use of a terminal emulator (such as Hyperterminal, but I prefer TeraTerm Pro) and investment in an LED RS-232 status box invariably resolves these problems rapidly.

This bit of tutelage coming from someone who uses:
NG
OM
CB
in his post? How dare you?!?! Oh, wait....let's see:

NG- anyone on Usenet more than an hour knows this.
OM - anyone involved in HAM radio more than a day knows this.
CB - anyone not living under a rock for the past 30 years knows this.

Moreover, most operators involved with digital comms knows what
a *GASP* TH-D7A is, comm software version numbers, let alone a TNC!
W2K? What, are you running CP/M on a Kaypro?

The original poster stated very clearly what he was asking, UNLESS
you are a CBer!

(Oooops....better spell this out....by 'CBer' I mean a carbon-based hominid
lifeform from the planet Earth* partaking in reception or transmission of
radio
frequency energy currently appropriated to the Citizen's Band radio
spectrum.)

*Earth - Third planet from the only star in the Sun solar system, Cygnus
spur
of the Orion arm of the Milky Way galaxy, sister to Andromeda.

Clear enough, OM?

Next time, run a search on the acronyms and /or model numbers YOU are
unfamiliar with. Then, you may partially elevate yourself above the CB
mentality.*

*CB mentality - be ignorant, speak like you're the authority, repeat ad
nauseum.

Do a Google search on "DirectIO" and then follow some
of the links. There are several products, a few shareware,
that emulate a hardware serial port to the application, and
use the Win NT (2000, XP) API calls to actually talk to
the port. Some of them even work :-) None that I've found
will support applications that need access to the system timer
interrupt though. One claims to do so, but fails to work.
Many packet applications hook the timer interrupt as well
as the COM port hardware interrupts. Those won't work
on Win NT (2000, XP) at all.

My own solution is to keep a DOS machine and a Win 98SE
machine around. The computers are junkers I got for free.
They are on the house network.

Now I can run any of the older software ...

You need to understand FCC Part 15. It is available at:
http://www.access.gpo.gov/nara/cfr/waisidx_01/47cfr15_01.html

There are plenty of companies that make such unlicensed transmitters.
Many of them are in inexpensive 'kit' form such as those at
http://www.ramseyelectronics.com

> I think presently the limit is 1 mw.

Not so. On the FM broadcast band, it is 250uV/m at 3m.

2382. GIVE-AWAY PRICE on Roller Inductor Tuner

OK, slashing price on this to the "disposal level."
Next step will be to send it to the dreaded eBray.
At this low price you can't afford NOT to buy it!

CLASSIC 1940s-50s Differential 'T' ANTENNA TUNER
Large roller inductor type with turns counter.

Heavy duty large components Two variable capacitors,
looks like it would handle a kilowatt with ease.

The versatile circuit is configurable for either series or
parallel 'T' configuration. Has jumpers in front to change
set-up easily.

Has built-in SWR bridge featuring an E.F. Johnson meter with
controls for FWD, REV and gain.
Case is metal with hammertone gray finish,
and has a removable lid.

Final reduction to $75.00 plus shipping

E-mail me to purchase

Stupid boy.

There is a big difference between using jargon and
quoting meaningless commercial products in CB (Cheque Book)
fashion. _REAL_ Radio Hams manufacture their own rigs and
take to the writing of software like a duck to water. CBers buy
everything off the shelf and then get confused when they don't have
sufficient technical acumen to sort out problems in their off-the-shelf
gear.

TROLL! Now, where'd I put my 12 guage loaded with
troll shot?!? :)

"Stupid boy"? Surely, you jest.

S'matter, OM? World passing you by, and all you can do
is piss on it out of spite?

His "jargon" was right in line with his question, fool. Simply
because is sounds like gobbledygook to *YOU* does not
mean it is "meaningless", as you are so inclined to say.

It was chock FULL of meaning to any HAM who deals with
digital communications. To a "stupid boy", it is meaningless.
(That's your cue!) Enter Bairn Reay, stage left.

Now you know where and who you are. A true CBer. All
mouth, no brains. :)

As far as "manufacture their own rigs", well, bucko, show me
YOUR waferfab and SMD assembly facility. Also, please
demonstrate to the NG your "sufficient technical acumen" to
code the logic into those EEPROMS, PROMS, processors,
etc.

Show us your "homebrew" rig with built-in TNC.
Show us your "homebrew" DTE device to gain terminal access
to such devices.
Show us your "homebrew" firmware that controls such devices.
Show us how you wrote it without the use of any COTS items.
Show us how you mined your own heavy metals used in your
personal facility to create such devices.

This software that you "take to writing like ducks to water"...ummm,
was this written on a "homebrew" machine? The language it was
written in, did you create it? The devices the code was stored on,
were they created out of personally mined iron ore?

You ain't real, fool.

There's a LOT more to HAM radio than just being an old fart
who thinks "his way" is the only way. Hitler was one of those
types. Your folks should be so proud.

Time to go change your Depends Undergarments. The stench has
whazzed your brain.

PS to NG: Pardon my divergence from the "no feeding the trolls" sign. :)

Not so...it is more like 100mw figured on signal field strength at 30 feet
I believe. Look up the Part 15 rules on the FCC website and it will tell
you how to figure the max allowable power...

Hello Hank

> that emulate a hardware serial port to the application, and
> use the Win NT (2000, XP) API calls to actually talk to

Yes, these are all device drivers operating in kernel mode with a Win32 user mode API.

I first used one of these a couple of years ago with some mods I wrote for WispDDE to make it work with some parallel port devices under NT, which has since been documented with the application for quite some time.

I was very careful to specify that:

> > you cannot write a Win32 application for use in NT/2K/XP which
> > will successfully ***write directly*** to a hardware port (x86 IN and OUT
> > instructions) in ***user mode***. It will generate an exception.

> None that I've found
> will support applications that need access to the system timer
> interrupt though. One claims to do so, but fails to work.
> Many packet applications hook the timer interrupt as well
> as the COM port hardware interrupts. Those won't work
> on Win NT (2000, XP) at all.

Yes if someone's managed to write a Win32 app that tries to access the IN/OUT instructions directly it won't work, but 16 bit apps might work if you're lucky using the NTVDM. InstantTune, for example, works and uses the system timer and interrupt driven UART extensively.

> My own solution is to keep a DOS machine and a Win 98SE
> machine around.

Yes, I do the same, but it's not very convenient! BTW, DOS apps dependent on the system timer in W9x will loose ticks when not in the foreground even without suspend set.

Message-ID: <3d5c30c6.234703@news-server.optonline.net>
Source record: 40400

Yaesu USA has had my FL-7000 amplifier for repair (damaged by FedEx Ground in shipping) for four months and I have yet to see an estimate. I have telephoned a half dozen times and sent two emails. They acknowledge having it but no estimate comes. Before I sent it to them, they said I would have a written estimate in 6-8 weeks.

Does anyone know a name there that I can send some certified mail to?

Is this office like the old Soviet Union? My parents should have sent it in when I was born so that it would be ready when I reached adulthood?

There is also a warning posted on the websites of several repeater groups in Colorado and Wyoming regarding this issue.

I do not have the contact info but 2 operators in the Cheyenne area have been hung out to dry for over 6 months now. You might get some contact info through N7GT, Greg Galka.
He oversees the Cheyenne club website.

Good luck and 73

Anyone have a working LCD for a Kenwood TR-7930/50 they don't need?
How about a 'parts' TR-7930/50 with a working LCD? Anyone know of a
source? Thanks.

2393. Packet Radio to Internet Portal

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-15 23:49:31 UTC
From: The Smith Family <wsbg@sympatico.ca>
Message-ID: <64X69.5685$%R5.1420676@news20.bellglobal.com>
Source record: 40404

Picture this: an external USR 56k v92 modem connected to the COM port (or tty in Linux) of a box running your favorite BBS package and having it work well as it does right now.
Now picture: an external TNC (sort of like a modem for the air waves) connected to the COM port (or tty in Linux) of a box running your favorite BBS package and have it work well serving not only dial-up phone connections, but connections from Packet Radio (a digital packet transfer ability with Amateur (HAM) Radio.

Both modems can use a com port, both can send signals indicating a connection has been made, and both are fairly similar. There are some things that would have to be added though (easily done) which would be the sending and receiving of "this is my identification letter and number block" which may even be able to be done through IEMSI and have IEMSI log the QSLs (radio identification numbers).

For those of you that don't know IEMSI is a way of programming your terminal program (ie. Terminate!) to automatically negotiate ones name, password, etc. It may not be applicable to your BBS software as it may not yet support it. But don't fret, it's not needed to bring in support for this.

Now for you sysops: Imagine this: You've got a sweet box running your favorite BBS software. It's connected to the Internet, you've got regular modem, and you've got a packet radio modem. Now you can have callers experience your BBS using telnet from anywhere around the world, you've got access for local folk via your phone modem, and you've now got people possibly connecting from areas so far around the world with their radio modems. Wouldn't that be cool. You're last user lister could list people from almost anywhere, and also list their method of connection whether it be by phone, telnet session, or radio modem. It'd be cool, huh? Now for the great stuff. Imagine that BBS software had PPP connect options so that people using HAM Packet Radio Modems or Phone System Modems could get on the internet:

A HAM to Internet portal, oh my! :)

Well if you can make it happen, why not? Try. Try hard.

Hello Ken ... sounds like the same fellow runs that facility that ran the Kenwood facility about 15 years ago. I had my 1 week old 940 come back from a repair in Ohio with 2 broken pots due to UPS dropkicking the box. The fellow in Calif said that they had no parts for replacement in stock and it may be 6 months before they would come in. This is a response from a supposedly sane person to someone who just purchased a $2700 radio. I have not since nor will I ever purchase a Kenwood product even if the display gives me the daily number at 6 PM. The good folks at R&L took the pots out of their demo unit for my repair. My next new rig will be a Ten-Tec based on what I hear regarding service. My last new rig was a K2 ...again excellent folks to deal with. Good luck with your situation Ken.

2395. Yaesu Factory Service???

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-16 01:16:37 UTC
From: cbhoelzel <n4bjx@naxs.com>
Message-ID: <3D5C5275.DAE973B1@naxs.com>
Source record: 40406
Cross-posted to: rec.ham-radio,rec.radio.amateur,rec.radio.amateur.equipment

Hello, friends -

Here is a story that may give you something to think about if you are considering a radio purchase.

Some years ago I bought a Yaesu FT-5100 dual band (2m/70cm) transceiver. It has worked quite well for me. However, over the past two years I have noticed that the liquid crystal display has begun to show a crescent shaped black mark in the upper center. So far this has not caused any problems, but I can foresee that it will grow and eventually the display will be unreadable.

I spoke to my favorite dealer and he told me that he could get it repaired with a shorter turn around time than if it went directly to Yaesu. OK, I said let's give it a try. Unfortunately, his technician promptly sent it to Yaesu.

After nearly six weeks, Yaesu told the dealer that there was more wrong than just the display. It had also lost power - that is it was putting out about 20-25 watts instead of the expected 50. Cost of total repair would run in the neighborhood of $450.

My response was "just fix what I asked for, no more"

Yaesu's reply was to the effect that it was an "all or nothing deal". They would not just replace the display.

At that point I said don't bother, just send it back. Consider that I can at this time buy any of the following from AES:

Yaesu FT-7100M $300
Kenwood TM-G707A $300
Icom IC-207H $300

Why in the world would I spring for half again as much to repair the 5100 when all three of these mentioned have more bells and whistles?

If someone from Yaesu wishes to defend their all or nothing policy, I will be happy to listen. Until then it will be a cold day in Hades before I purchase another Yaesu product. In the meantime, buyer beware.

Chip Margelli (sp?) is the Cerritos Service Center manager. He has always helped me out personally with any service related issues and the last item I sent to him for updates (an Ft-100) was turned around in 9 days (including return shipping).

Um ... the Land Line Lids have been doing this for years.

Instead why not imagine:

There is a disaster in your area, and telephones and cable are out.
So you set up your laptop and tnc at the local Red Cross shelter,
link to a packet node a few dozen miles away, and access the internet
across Ham Radio, just as if you had a (slow, 9600 baud) dialup modem.

We are doing exactly that in NW Oregon.

I just went through a three month wait on my FT-757.
I called them a few times, their response was, "not ready,"
and then one day I called, and their response was something
to the effect that they had been waiting and waiting for me to
call (they had my phone numbers and e-mail address).

In their defense, I must say that they did an awful lot of
fixing for my $108, and not only did they made the rig
work again (all that I asked), they also fixed the FM
receive and made the noise blanker work like a champ.
The work order shows 21 components that were replaced.

I have heard that the backlog is due to Yaesu knowingly
selling all of those defective dual-band mobile rigs that
all get sent to them after a few days...

GE Portables

GE MPA VHF Scan 136 - 150.8 split 192 channels nice 9.0

Condition. With battery and charger. I have this programmed for

Ham and up to 152 MHz before it will not lock on frequency.

$225.00

GE MPA VHF System 146 - 170 Aegis digital encryption. Nice radio

9.0 condition. 160 channel Alphanumeric display. With rapid charger

and battery. Great ham or public safety radio. $300.00

GE MPD select model 470.- 488 MHz. 48 channel Alpha-Numeric display.

With battery and standard charger. 7-7.5 $85.00

GE MPD scan UHF 450 - 470 48 channel Alpha display. Looks ok and programmed
for ham and Public safety. Battery and charger. $125.00

GE MPD select UHF 450 - 470 48 channel alpha display. Looks good with
battery and charger. On ham and PS. $100.00

GE PCS UHF 440 - 470 8 channel with battery and charger. Looks

Good. $95.00

GE PLS VHF 16 channel. These average an 8 - 8.5 condition. 150 -170

but I have programmed these in the ham band with no trouble. These

have battery, antenna, and standard charger. $75.00 each

GE PLS UHF 16 Channel. 8 to 8.5 also. 450 - 470 split but I can

program these to the ham band. With battery, Antenna, and Charger.

$85.00 each. Have 3 of these.

GE MPS VHF 12 channel. 8.5 condition. New antennas and NOS batteries

Standard charger. $60.00 each have 2.

GE MPS UHF 48 channel. 8 = 8.5 condition, These have NOS batteries

And have 4 banks of 12 channels. These can go to the ham band. I

have been Using one of these on my ham repeater and it works great.

$60.00 each I have 4 of these. Programming on 12 channels included.

GE UHF MPS 8 channel with 8 different tones. 8 different tones can be

Selected for each different channel. Battery and antenna. $50.00

GE Monogram UHF 10 channel portables. 3 radios 2 new batteries and 1

good battery. With 1 dual slot charger. $200.00 all 3 radios.

GE Mobiles

GE MVS UHF 440 - 470 16 channel scan. With mic and no bracket.

This radio works from the Ham band through GMRS and everywhere

In between. $135.00

GE MVS UHF 440 -470 2 channel. Works and looks good. $120.00

GE MCS UHF 440 - 470 4 channel 10 watt mobile separate speaker is also the

Control head. With mic. $85.00

GE MLS Low Band 16 channel scan. 42-50 split. New mic. Should

Program to 6 meter ham. 60 watt $150.00 (sale pending)

GE Monogram UHF 16 channel scan. Nice radio with mic. 40 watt

Nice radio. $175.00

GE Mastr II UHF 75 watt with preamp. No Icoms drawer only.

MC65KKG88B $90.00 each only 2 left

GE Mastr II Lowband 42-50 slit 110 watt. MC74KCN33A

With 1 set of Icoms $40.00 each I have many.

GE Mastr Pro Low band 110 watt 42 50 split. MT74TCS33

With 2 sets of Icoms. $10,00 each. I have many.

GE Mastr exec II VHF 75-watt mobile complete with accessories. $60.00

each

GE Mastr exec II VHF Mobile extender (repeater like Pac rt) for Mastr

II or Delta. $20.00 each

GE Mastr exec II VHF Mobile extender for GE Ranger (only Exec II that

I have seen marked Ericsson) $65.00

GE S990 head 128 channel scan. Just in not tested. $60.00

GE S550 head 16 channel looks good but not tested. $35.00

GE S700 head and complete Motorcycle cable set for Delta or Ranger.

16 channel model has short cable and some handle bar mounts. Mic

included but no speaker. Not tested yet.

$50.00

GE Mobile Vehicle Adapter for MPA, MTL, MPD, and TPX. This unit

charges your battery and turns your portable into a mobile radio.

(Convert a Com) With mic, speaker, and power cable. $90.00

GE Accessories

GE Duplexer Mod DB4075 P/N 19C307166P2. tx453.xxx rx458.xxx

With cables. 4 cavity. $175.00

GE Duplexer Mod P1 P/N 19C307166P1 tx453.xxx rx458.xxx

With cables. 4cavity. $175.00

Mastr II control cable. $8.00 each

Mastr II head for mobile repeater operation. $5.00

Mastr II Mic. $5.00

Mastr II 8 channel tone boards. $5.00

Mastr Exec II VHF receive section. $20.00

Mastr Exec II VHF Exciter. $18.00

Mobile Repeater cable for Mastr II. $10.00

Mobile Repeater cable for Delta or Ranger. $20.00. I have seen

programming cables made from these.

GE white Versatones, 103.5, 162.2, 173.8, 179.9, 186.2, and 203.5.

$4.00 each. I have a large amount of 203.5,186.2, 179.9, 173.8, and

162.2. If you buy 10 = $3.00 each. Buy 15 =$2.50 each. Buy 50 = $1.50

each. These are the only frequencies I have.

GE Mastr II Icoms. EC = $5.00 each, 5C = $10.00 each. Picked up 3 sets of

UHF 2C Icoms $30.00 per set of 1tx and 1rx Icom.

GE Delta cables. These are the downloading type used with the S820

heads. And all other heads $40.00 each

Delta mounting plates. $10.00 each

Ranger mounting plate. $15.00

GE Mastr II mounting plates $15.00 each

Power plugs for S500, S550, C500 etc heads. Good pulls $5.00

GE S-550 / 500 and others mounting brackets. $5.00 each

GE MPA, MPD, MTL standard Speaker mic. $25.00

GE PCS Universal charger. With wall transformer $20.00 each

GE MPA standard chargers. $20.00 each

GE MPA Rapid chargers. $30.00 each

GE MPI desk charger with wall transformer. $10.00

GE MPI Rack charger, 8 position. 25.00

GE MPI Mobile battery charger, Rare. $20.00

GE Battery discharge analyzer. For MPA, MPD batteries. Attaches to a

rapid rack charger with a DB 15 cable and uses a MPD body to attach a

battery to. Has LED readout in display area of MPD body to tell

discharge rate. Another rare GE goodie. $45.00

GE shoulder strap like new, attaches where belt clip is. $15.00

GE Belt clips. $10.00 each

GE Voter. Has 9 total rec. cards and 2 TX cards. With extender card

and power supply / speaker. $300.00

Other Radios and Accessories

Motorola GP68 UHF. Like new. Has 20 channels that you can program

from the front of the radio. With battery, charger, and programming
instructions. $250.00

Motorola HT50 VHF 2 channel 150 - 170 belt clip holder battery and

Charger. $75.00

Motorola Radius P200 UHF 438 -469 DTMF front with charger. 6 channel

And has stubby antenna. $135.00

Motorola MT1000 UHF 438 - 469. 16 channel scan. Has battery , charger, and stubby antenna. $165.00

Motorola Maxtrac VHF 40 watt 16 channel scan. 5 pin. With Mic. $225.00

Motorola Radius / Maxtrac UHF 25 watt. 2 channel 5 pin port. With shure Mic. $175.00

Uniden SPS 802TS 800 LTR portable. With charger. $75.00 Pair.

Yaesu FTH 2009 VHF portable. 6 channel. Works great on ham and public Safety band. With wall charger $85.00

Radio Shack HTX 212 2 meter Mobile. 30 memories, Scan. Works great. This was in my van before I added another MVS so I know it works. $95.00

Marconi UHF portable. 16 channel scan with NOS battery. Made by Midland. $65.00

Midland 70-336B VHF Mobile radio. 8 channel scan. with mic.$65.00

Motorola GP300 VHF 2 channel. on ham band. Has battery OK condition and charger. $150.00

Motorola Mitrek VHF high 110 watt drawer only. $50.00

Motorola MT500 VHF nice shape. Crystals removed but I have 1 set of crystals for each radio. Also have a working battery and charger for each. I have 4 of these. $50.00 all

Voter from IMTS phone system. 2 rec. and 2 TX cards. $40.00

Maxon Rapid Rack charger for 0510/0520 radios. Think they will work with the sp2000 as well.$35.00

Consignment section

This area is for a few friends who like those other radios you know "Motorola" They are good people and I will pass along any trades you may wish to make.

Motorola single rapid chargers for HT600, MT1000, P200. $25.00 each

Motorola HT1000 UHF Intrinsically safe Re-cased looks new. 16 channel scan with charger. $425.00

Motorola Saber II UHF 48 channel scan. With battery and antenna.

9 condition $300.00

EF Johnson Challenger UHF 80 watt trunk mount, 99 channel Alpha-

Numeric head. $225.00

Motorola GP300 UHF 2 channel. Charger and extra battery. $150.00

Motorola Mostar UHF 2 channel and HT 90 2 channel that talk to each other

Mostar has base mic and HT90 has speaker mic and charger. $90.00

Want List not FS

Extra parts for GE suitcase programmers Data modules, Printers, cables,

proms, Anything you have extra. MPA or MPD portables what do you

have and what do you want for them? Johnson scorpion program cable.

Terms

All prices are plus shipping from 40201. All items are used unless

noted and only have a no DOA warranty if I say it works. If I say

not tested your on your own. If I think it may be bad I will not list

it. I take cash, Postal Money Orders, Paypal, and checks but I hold

them for up to two weeks to clear before I ship. If you have a

question E-mail me. Contact me off list at. Gundoc@insightbb.com

For sale:
Alinco DJ-180T 2m (VHF hi) handie-talkie
solid, reliable HT, up to 5 watts output
130-174mhz RX & TX (modded),10 mem channels, ctcss encoder

comes with standard nicad battery, 12v nicad battery, DC adapter (for
cigarette lighter or powersupply operation)
I dont have the charger, manual, or box for this. I will warranty the radio
against DOA, but not the batteries since they are used and several years
old.
for details:
http://www.alinco.com/Archives/Handheld/dj180.pdf

$60
DFW, TX area

It's NOT encrypted. It's his public _key_. Did you click on the link?
You obviously do not understand public key cryptography. I suggest
you read up on it.

Rocky

Mirage B-5030-G w/ RC-1 control head

50 watts in - 300+ watts out *all-mode*
Ideal for 10 to 60 Watt 2 Meter mobile or base.
Low noise GaAsFET preamp, 0.6 dB noise figure. Selectable 15 or 20 dB gain.
Heavy-duty heatsink spans entire length of cabinet.
Power transistors protected by Mirage's Therm-O-Guard.
Fully protected from high SWR and excessive input power, has warning LED.
Adjustable Transmit/Receive switching and remote external keying.
Draws 48 amps at 13.8 VDC.
Measures 12x12x5 inches.

Item is currently listed on Ebay

Riggggggghhhht....what's YOUR contribution?
An ignorant, mindless attack? Niiiiice!

Cut and run, Bairn, cut and run.....

Just as I suspected. You have nothing.

You have made no contributions, just attacks. I can
only assume this is how you run your life, and how
you act in HAM radio. You are a disgrace, and an
embarassment to the hobby. Loser.

Date: 2002-08-07 05:07:36 PST

God this Gareth (Bairn Reay) is a waste of space.

Never even makes a mobile phone call. Has he even got a mobile phone?
Probably not. No point if no one wants to talk to him. Not even
Elisabeth!

Nothing our great country has ever done pleases him. Probably because
he doesn't know the history!

Slags off those who make sensible technical comment but never adds to
the thread himself- not surprising as he knows F*** about most things
it appears. Doesn't understand dBs, Slope Detection, antenna gain,
noise figure or temperature. Odd considering the noise he generates.

Can't get another job in the telecoms industry- hardly surprising.

Slags of CBers but lurks on the CB bands to talk to his CB mates. I
don't know any CBers but may be he is right- they are brain dead. Must
be to talk to him!

A software expert who doesn't know the correct name of a language he
has written programmes in or the fact this language is only used in
applications he couldn't have work on!

Hasn't got the ability to even hide his Newsclient so we can't see he
isn't using his own software.

What a waste of space- what did poor Elisabeth do to deserve him?

Was she driving the Landrover that hit him. Was she aiming for his
head?

God this Gareth (Bairn Reay) is a waste of space.

Never even makes a mobile phone call. Has he even got a mobile phone?
Probably not. No point if no one wants to talk to him. Not even
Elisabeth!

Nothing our great country has ever done pleases him. Probably because
he doesn't know the history!

Slags off those who make sensible technical comment but never adds to
the thread himself- not surprising as he knows F*** about most things
it appears. Doesn't understand dBs, Slope Detection, antenna gain,
noise figure or temperature. Odd considering the noise he generates.

Can't get another job in the telecoms industry- hardly surprising.

Slags of CBers but lurks on the CB bands to talk to his CB mates. I
don't know any CBers but may be he is right- they are brain dead. Must
be to talk to him!

A software expert who doesn't know the correct name of a language he
has written programmes in or the fact this language is only used in
applications he couldn't have work on!

Hasn't got the ability to even hide his Newsclient so we can't see he
isn't using his own software.

What a waste of space- what did poor Elisabeth do to deserve him?

Was she driving the Landrover that hit him. Was she aiming for his

The existence of other childish contributors
to the NG does not make your own stance any less
childish.

The subject under discussion is the differentiation between
Ham Radio and CB. If you cannot contribute without resorting
to silly infantile jibes, then you would seem to wish to class
yourself with the CBers.

What you are missing is that the public key is just used to verify the message (in this case one sent in plane text) is from the person that actually sent it and not from someone trying to get another in trouble by sending a bogus message with someones elses name.

Still a bunch of wsted space as far as I am concerned in most groups.

M. Schneider <markinokla@juno.com> wrote:

>Yeah, but it seems pretty silly to encrypt a posting to a PUBLIC forum!

It isn't encryption. It's signing.

Encryption hides the content of the message from the public, and I agree it would be a rather silly thing to do in most cases.

Signing lets anyone (who has a copy of his public key) confirm that he is, in fact, the author of the posting, and that it has not been tampered with. It's a way of proving authenticity.

It's trivially easy to forge Internet addresses into email and into USENET postings, as the spam problem will clearly demonstrate. Some posters have been the victims of deliberate forgery attacks, with people posting falsified articles using their return addresses. Digital signatures can be used to help with this problem... the address owner can sign articles, but the forger will be unable to do so.

Greeting Sam

After reading your message, I continued with some research I had started a couple months ago. I fellow at work gave me a lithium battery pack that he could not get to work with his computer. It took quite a while but I managed to get it openned (today {as a result of your inquiry}). I got it openned a short time after it was given to me but today I actually got the circuit boards, etc, exposed.

The 4 pins, you talk about, are all used as part of a super intelligent (my word) charger monitor for the battery, There, in all likelyhood, is one or two chips, or more, in your battery pack that are communicating with your radio and charger.

This chip lets the radio / charger know in what state of charge, or discharge, the battery is in at any give part of the charge discharge cycle.

I am not employed by the battery manufacturer or manufacturer of the radio but I would strongly recomment that you only use the charger that came with the radio or battery. They were designed to communicate with that / those monitor chips to properly and safely charge and discharge that battery.

Question? Does the radio had an indicator to show how much of the battery has been discharged. I am guessing some kind of bar graph showing battery life?

Larry

Hi All,

Can anyone point me to a website that has a copy of the Trio R820 manual
on it ?

I've just got one that needs some work but alas no manual :(

Please reply to group and direct ...

Cheers!

MikeT ...

Not all of the FT-7100's were defective. It just goes to prove
that one shouldn't rush out to buy a new model of anything
as soon as it hits the dealers shelf. They admitted some
quality defects were made with the initial production run of the
FT-7100 but soon figured out the problems and fixed them in later
production runs.

I just sent in my Yaesu FT-7100 to get some updates done
on 7/1 which they received on 7/6 and I received it back on 8/3.
Mine is/was not defective but I wanted some of the mods that they
were doing to the defective ones done to mine anyway and since
it is still in warranty, they did them at no cost to me.
That didn't seem too bad to me, since they have just recently moved
their repair facility, plus with a backlog on the FT-7100 repairs,
which I understand that they have quit repairing now and
started replacing with new units to speed things up.

Sounds like the problem Kenwood has with the TM-V7A. This display
reportedly by Kenwood only has about a 4 to 5 year life expectancy.

That's cheap, when you consider that Kenwood does not sell
replacement control heads for the TM-D700A. If that display
goes bad, you have to buy a new radio.

You guys misunderstand my beef, entirely. I only wanted the display replaced. I was NOT interested in all the other stuff they were insistent on doing.

By the way, LCDs are not all that expensive. Not too long ago, Keithley was delighted to sell me a new one for my DVM at what I considered a fair price (under $20). Besides, they gave me instructions on how to go about doing the R&R.

> Radio lasted 10+ years and you figure it should last a lifetime??

The ON Timer (press and hold key "6"). To reset this timer to zero, the manual says to press and hold the F/W key and then press the 6 key when the timer appears. I cannot seem to get this to function in this manner.

When pressing and holding the F/W, the display shows F for a second, then goes to the memory write mode (W on screen), then after about 5 seconds the screen returns to the timer mode, but pressing the 6 key has no effect.

Any ideas?

On disassembleing my 225A h t for repair, a black wire that was connected from the front case assembly to the I F board became disconected from the front case board. There are also 2 ribbon cables that connect betwen these boards. They are ok. One end of the black wire is soldered to a lug which is held to the I F board with one of the I F board mounting screws. I dont know at what point the other end is soldered on the front case board. The schematic or pictorial doesnt show this wire. May be a static ground. Everything seems to work ok without it. Can anyone help on this?
Thank You

Most likely you have a ground fault in the phone line somewhere. All it takes is a wire staple that went though the wire instead of around the wire.

It could also be a protection device that's blown out. This would be located at the "demark" point - usually the point where the phone line enters the building.

But don't rule out junk phones. I got a cheapo that picks up noise - probably the video carrier from a local TV station.

You'll have to do a "divide and conquer". Cut your phone system up into little pieces and figure out what piece is causing the problem. Start with a good quality phone at the demark point with the rest of the house disconnected and work your way from there.

Will filters do any good? Only if the problem is a junk phone picking up RF. You'll have to fix the problem at it's source.

Mark,

Here, in case your newsreader didn't catch the original post, is the original post:

BEGIN QUOTE:

Letter from Hollingsworth smacking down a Corporate Lawyer trying to make a Ham pay to fix an interference problem. It is probably costing this corporation more to send letters back and forth to the FCC then it is to relocate the transformer.

August 9, 2002

Michael C. Massengale, Esquire
Baker Botts, LLP
One Shell Plaza
910 Louisiana
Houston, TX 77002-4995

Re: Reliant Energy, Incorporated; Radio Frequency Interference to Amateur Radio Station W5GCX

Dear Mr. Massengale:

This is in response to your letter of June 28, 2002, on behalf of Reliant Energy, with respect to radio frequency interference from the operation of the company's electrical service equipment to Amateur Radio operators.

The Enforcement Bureau appreciates your comprehensive response. However, your interpretation of applicable Commission rules with respect to this matter is in error in several material respects. Reliant Energy is obligated to eliminate the interference complained of.

Your letter suggests that the interference experienced by Mr. Edward J. Gerber is due to an otherwise properly operating 250 kVA step-down transformer. Reliant's proposed solution is to relocate the transformer to another area removed from Mr. Gerber's residence, and that Mr. Gerber bear the labor cost of this relocation.

We are willing to accept your client's analysis that the transformer is the cause of the interference problem; but that is most unusual, since an arc in a transformer would typically result in failure of the transformer within a short period of time. A far more typical cause of radio interference from utility lines is in loose or corroded hardware, tie-wires, or defective insulators. Furthermore, you cite use of infrared cameras to locate hot spots as a means of identifying noise sources. The

small arcs which cause RF interference typically do not cause significant heating, and therefore this may not be the most effective means of diagnosing interference problems. Finally, it is unnecessary in most cases to interrupt the power as a means of identifying the source of noise.

Regardless of the source of the interference, it is improper to attempt to pass the cost of the relocation, or other solution, to the licensee that is the victim of the interference. It is exclusively the obligation of the operator of the unlicensed device. Your interpretation of Reliant's obligation with respect to the Amateur Radio Service is that Amateur stations are not part of any "service", and that the obligation to avoid interference to a "radiocommunication service" does not include Amateur Radio stations, since individual Amateur Radio stations constitute a "use" but not a "service".

The attempted distinction is baseless. The Amateur Service is "a radiocommunication service for the purpose of self-training, intercommunication and technical investigations carried out by amateurs; that is, duly authorized persons interested in radio technique solely with a personal aim and without pecuniary interest." 47 C.F.R. §97.3(a)(5). Individual licensed stations are each part of this Service. The condition of operation of any Part 15 unlicensed device is that it cannot cause harmful interference. 47 C.F.R. §15.5(b). Harmful interference, which is identically defined in both the Commission's rules and the International Radio Regulations, includes any emission, radiation or induction which seriously degrades, obstructs or repeatedly interrupts a radiocommunications service operating in accordance with Title 47 C.F.R. Reliant Energy is not entitled to cause harmful interference to a licensed Amateur Radio station in the operation of its devices.

Furthermore, you claim that, since 47 C.F.R. §15.13 requires that manufacturers employ good engineering practices to minimize risk of harmful interference, that provision does not apply to Reliant Energy. However, 47 C.F.R. §15.15(b) makes it clear that operators of Part 15 devices are required to cease operation should harmful interference occur to authorized users of the radio frequency spectrum, and therefore parties responsible for equipment compliance should reduce unwanted emissions below the maximum levels specified in the regulations.

Therefore, the position of Reliant Energy, that it is willing to conduct further investigations or remedy the interference problem only if the licensed radio amateur pays its expenses, is unacceptable. Reliant must do all things necessary, and bear any and all necessary costs, to comply with its obligations as an operator of unlicensed devices pursuant to the Commission's Part 15 regulations. You are hereby requested to provide a written report within 30 days of receipt of this letter as to the steps that have been taken to eliminate this interference. Further enforcement action will be withheld pending receipt of that report. The Commission expects, however, a complete solution without further delay, and good faith on the part of your client.

Hi All,

Back in 1980, when I was first licensed, I bought a "Radio Amateur's Prefix Map of the World" from the "Radio Amateur's Callbook Company"--the same company that used to publish the "Flying Red Horse Callbook". The map has been up on my wall for some 22 years, and is starting to show some age, as well as being outdated as many new prefixes have been assigned over the past 22 years. It's a good sized map in full color, and measures about 27 X 40, and has CQ zones on 1 side and ITU zones on the other side.

Is there anything like this available today ??? If there is, where can I obtain one ??? Thanks for your responses.

No, the radio can't be operated in that manner.
There is a serial port, that a computer can be used on it to enter
frequencies, etc.
Perhaps, the old "Stone Mountain QSYer" might work in that port too.

I have had one for several years. As a 2 meter only HT it does its job quite well. I have dropped it a couple of times, one time I bent the channel knob. It didn't seem to bother it. If you have specific questions you can Email me at treynolds@NOSPAMsaintmail.net.

The HM-95 off of my IC-2000H does DTMF on my IC-706II.
Dunno about rig control -- I don't think rig control
can be integrated with the mike.

For something off the shelf look at SSB Electronics transverters. There is also Down East Microwave and TenTec to consider. Some of the transverters need two LO crystals to span the SSB and FM portions of the band.

As the previous poster suggested, a good place to start is at the demarc. See if you can open your phone junction box. A lot of the newer boxes have a modular plug where they jump from the phone company side of the box to the customer side of the box. You can simply plug a known good phone into that modular jack. If you still have the noise, you are in some luck. It is a problem on the phone company side of the box, and therefore is their responsibility to fix it (at no cost to you). If you don't hear the noise, you then need to start testing your individual jack with the rest of the jacks in the house disconnected. Best of luck. It's a problem I've had to deal with in the past. I eventually ended up rewiring all of the phone jacks. It finally got rid of the noise.

2492. ADMS and FT-50 help? All I get is CERR...

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-17 20:11:02 UTC
From: Mike AB7RU <mparkes@nospamatt.net>
Message-ID: <170820021311014685%mparkes@nospamatt.net>
Source record: 40303

I recently bought a used FT50 and it seems to work fine, however
I am trying to get it working with ADMS and having nothing but
trouble. I followed the schematic at
http://www.icongrp.com/~sllewd/pcware.htm
but every attempt to download template from radio, or get data
from radio gives me a CERR - I have checked my COM port with
hyperterminal and it gives me the echo back so I am pretty sure
the port and the interface is functioning correctly. I have gone over
the interface and double checked everything. But no matter
what I try, .i still get only ..CERR. Is it possible the fault lies in
the radio? Is there a way to perform a diagnostic on the radio to
make sure its internal routines are operating properly? I am
close to just buying a factory cable but thought I would check the
group here to see if there are any other ideas. Thanks Mike

Having been in Little League Baseball, I find Charles' attitude the same
as what many parents expect. Their kids who are pitiful players are
worthy of a table full of 'participation' trophies even when they come
in last place. So whats the prize for the real winners?
This "you can be a superstar if you try" crap simply doesn't work when
you try to spread it across different disciplines. Its an insult to the
talented and a false hope to the hopeless.
Anybody who has the ambition to excel in something typically has the
talent to do so or else that ambition is short lived. You can't
legislate it by force-feeding government edicts that make them appear to
be equal.
I'm all for any free-bander who can put together a fine station and work
1000 countries without a bunch of frigging echoes, swingbacks, truck
stop chatter and all that other crap. They become hams quite naturally.
On the other hand, toads like Charles (see his pix) signing names like
"fantastic@sex" pretty much reveal his character as something you don't
want your children to encounter. He approves opening the doors simply
to accumulate a bigger corral for his deviance and you don't have to
guess very far what that might be.

2506. IC-2800H Mic Problem

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-18 02:15:00 UTC
From: JASON A DUGAS <kb5urq@prodigy.net>
Message-ID: <EqD79.426$b93.97@newssvr19.news.prodigy.com>
Source record: 40318

I've had a 2800H from ICOM for some time now and its worked flawlessly, until the other day that is.

For some reason during the middle of a QSO, it simply stopped transmitting. I feared that somehow the finals had burned out, but it seems that it is rooted in the mic. I've found that although somtimes it will switch over to the offset frequency it will not output power (no reading on the signal strength meter on TX), other times it won't even switch over to the offset. Other times it will both switch to the offset AND transmitt as it is supposed to. I suspect the problem may be in the mic due to the intermittend behavior though I don't have proof.

I'd like to find a schematic of the mic and talk with anyone who has had similar problems. I fear this is not a common problem among 2800H users since I was able to find nothing on the web so far.

Thanks for anyhelp you can provide,

Jason

You're out of luck Ken, according to the manual (p. 61) you have to press and hold a function key on the radio and a F1/F2 button and then turn power on. Think about it, the mic is dead until you turn the power on.

A friend on mine used a 555 timer chip, a transistor, and a relay to build a 10 sec timer that turns his rig on after the car is started.

Did you buy the ADMS new or did it come with the radio? I have used the ADMS with a FT2600M and found I was only able to load it ONCE on my computer. After I had a HD failure I tried to reload the software for the 2600 and instead had to "trick" the FT-90 software (which had not been loaded) to replace some of the necessary 2600 files.

I am sure you have already tried it, but, master reset (power ON while holding the A/N-D/MR-Mhz buttons, with a FT2600M) the radio. This clears everything. Then make a new template and try to upload it to the computer.

You may order your new QSL-cards from "UX5UO print":
Almost any type of QSL cards is available today.

Price of 1000 QSL-cards (including handling and mailing fee) is:
"Simple" (single colour one side 150 g/sq.m paper) cards - 22 USD*
"Advanced" (single colour one side 200 g/sq.m paper) cards - 26 USD
"Middle" (two colours one side 200 g/sq.m paper) cards - 32 USD
"Middle2" (two colours double sided 200 g/sq.m paper) cards - 38 USD
"Business" (200 g/sq.m paper double sided matt photo) cards - 44 USD
"Luxury" (200 g/sq.m paper double sided glossy photo) cards - 56 USD

Discount for ordering 3000 and more cards as well.
500 cards is possible as exception. Special discount for DX stations.

Cards will be printed within 3-4 weeks upon receiving order and payment
for all types of cards except picture cards (within 2 months for photo
cards).

Send your order (photos, rough design, text data etc) via mail:
P.Box 925 Kiev-100 02100 Ukraine
Phone (38044) 450-3752

or via e-mail to UX5UO ux5uo@qsl.net

2516. Re: IC-2800H Mic Problem

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-18 14:03:42 UTC
From: George Andrews <gandrews@ntplx.net>
Message-ID: <SCN79.38$YG5.253582@news.ntplx.net>
Source record: 40327

Jason,

I have an Icom 2800H and an Icom 207H. The mic for both is the HM98. I lost PTT function on the 207H. All other functions worked.

I believe there are two things that could be the problem. First and most likely, the PTT switch is an SMD device. With use, one or more of the connections has separated from the board. Although I have no equipment to solder SMD, I was able to repair the mic. I used a butane powered soldering iron that has a small point.(heated it up and shut it off) The area is large enough so that a solder "blob" wont be to much of a problem. If you don't have a low wattage iron, it will be cheaper to buy one than replacing the mic. The HM98 is $90.

Check your mic closely, use a magnifying glass if need be to check the connections. Only if the first step does not work, try the following.

The second possibility is a little difficult to explain. It assumes you have opened the mic case. The PTT switch has a metal cover over it. The part that is the switch is what I would call a diaphragm. There are some moving parts which compress the diaphragm to close the switch.The internal parts are very small, so becareful not to lose any. Very carefully pop the metal cover off the switch. get a piece of wood that the metal cover will fit over, with the "legs" pointing down. Use something like a #1 Phillips screwdriver and place a very, very small dimple in the center of the cover. You may have to retension the "legs" so the cover fits tightly over the switch. Pop the metal cover back on the switch. The metal cover appears to perform a spring like function. The process just described "restores" the tension applied by the spring. You may be able to verify the problem by pressing on the metal cover with a plastic pen. Press the PTT to see if the radio xmits. Be sure you have checked the first step as this will also restore the connection of the PTT switch to the board. Hope this helps.

Is it just me or does this group become more belligerent as time goes on? It seems that everyone likes to beat up on some guy because his opinion differs from ours. He let's us know about his difficulty with Yaesu's lack of customer service and everyone gets out a big stick. Sheesh.

Up until a month ago, both of my vehicles were 10-yrs old. What's the surprise? IF you take care of them, they take of you! BIG surprise!

IMHO, the FT5100, although tens years old is still a great radio. The low power output is a simple problem to repair. Most of the 5100/5200 models suffered from that trouble. My 5100 only put out about 25 watts and a simple change of the coax hanging off of the rear of the radio cured that. It seems to me that Yaesu Factory Service is an oxi-moron...sort of like Military Intelligence. IMHO. Yaesu simply does not want people using 10-yr old equipment. They know as well as the rest of us that the FT5100/5200 series was and is still a good radio. They'd rather sell you a junker like the 7100(yuck) and force you to buy a new junker every couple of years.

Flame Suit on, after all that's what this group seems to be good at...

Dan

2520. 6M Maxtrac Question

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-18 16:28:13 UTC

I've recently programmed a 42-50 Mhz Motorola Maxtrac to the 6M amateur band. I used the modification on the "Batlabs" page, adding some solder to get it to transmit beyond 50 Mhz. It helped, but only to the point where I can get full output to about 51.6 mhz. Beyond that, the power folds back to about 20W. Does anyone know of any modifications that can be done to extend the coverage by another 1 Meg or so? How about any other web sites that discuss the issue? Please, if you can help, drop me an E mail at njscan@lycos.com Mt ISP is having issues with USENET so I can't always access it. Thanks

Its ADMS 1D - but I also get the same clone error using another ft50 software program, so i don't think its software related. I have tried doing a full reset on the radio, didn't help.

I checked the voltage between ground and pin 2(data) while ADMS is running and it sets the voltage to -(minus) 3.75 v going to the radio - not sure if thats correct or not, I would have thought it should be a +voltage?

<< Just bought a used MFJ-16010 ST, but there are no instructions. >>

Richard-

I've searched but can't find the instruction sheet that came with my MFJ-16010 ST. I can't even find the tuner at the moment! Please forgive me if my memory is a bit rusty.

As I recall, it has two controls on the front panel, a variable capacitor and a switch that selects a tap on a coil. I think it is connected internally with the capacitor between the radio and the antenna, and the coil between the antenna terminal and ground. You would connect the radio to a co-ax connector on the tuner, and the antenna wire to the binding-post terminal that is also connected to another co-ax connector. (If I'm mistaken about the binding posts, you need to connect the wire to the center conductor of the second co-ax connector.) A ground wire may also improve reception when using a random wire antenna.

Does it also have an extra terminal on the back with a dashed line to one of the others? If so, the dashed line represents a jumper that would not be needed with a random wire antenna.

In your situation, you would simply adjust both switch position and tuning capacitor for best signal strength. Generally, the lower-letter coil positions are for higher frequencies. I seem to recall using the "B" position for the 28 MHz Ham Band.

The instruction sheet probably suggests using an SWR bridge with a transmitter to adjust the tuner. Obviously that doesn't apply for a receive-only installation. If you wanted to pursue that approach, MFJ also makes a series of SWR meters that have their own signal source. I have the MFJ-249, which covers frequencies between 1.8 and 170 MHz.

As a side note, you may find that a given wire can't be tuned with this tuner on some frequencies. If that appears to be the case, simply reverse the input and output connections and try it that way.

<< Just bought a used MFJ-16010 ST, but there are no instructions. >>

Richard-

I replied a few minutes ago, but may not have included a copy to your E-Mail address.

I found a product description at http://www.mfjenterprises.com/products.php?prodid=MFJ-16010, but they did not have the manual listed.

Based on the product description, it may only have the two co-ax connectors on the back. You will need something like a banana plug to connect your random wire to the co-ax connector center conductor. If a ground terminal is not provided, you may be able to connect to the shell of the co-ax connector, or use a mating connector to attach both ground and antenna wire.

2530. TS-130S meter problem

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-19 00:57:46 UTC
From: Ann Onymous <bravo20@sympatico.ca>
Message-ID: <tlX79.621$sY3.212114@news20.bellglobal.com>
Source record: 40341

I bought a Kenwood TS-130S yesterday at a flea market. The only problem with it is the lack of signal strength indication. The meter works on transmit. Decreasing rf gain swings the meter up. Instead of sitting at 0, it was originally around S4, which I just corrected with VR2. VR1 would presumably affect the gain of the stage driving the meter, but I'm not getting much effect. Weak signal or strong, it just sits near 0. Does anyone know if this is a known problem with these units, or something more unique for me to dig into?
Thanks

Must be ENIAC era "computer grade" caps.
Even then, I doubt that there was 3600 vdc
running around anywhere.

Hi Fellas;
I have for SALE:
1)- 35 NOS ceramic spreaders, 1/2" dia x 4-1/4"oal, for 3"open line.
$50.00ppd.

http://www.myradioroom.com/35spreaders.jpg
2)- Waters #336 coaxial transfer switch, NOS w/Papers, plate & box. 1.2 to
150mcs, 1KW. Used to switch the Older amps in/out of line, Hardly seen
anymore these days!
Price is $65.00ppd

http://www.myradioroom.com/watersnos1.jpg

http://www.myradioroom.com/watersnos2.jpg
3)- 6 B & W antenna coils(marked, see pic) with center insulator, used but
wire removed for storage, good shape, no other info but I check AES catalogue
& they may be for a shorty 40-10 meter dipole but not sure anymore! Cost is
over $100. Price is $40.00ppd

Is it possible that the low output problem caused distortion causing the
radio to transmitt harmonics or other unwanted and illegal RF products?
Maybe they were doing you (and the rest of us on the bands) a favor.

<< The only problem with
it is the lack of signal strength indication. The meter works on transmit.
Decreasing rf gain swings the meter up. >>

Ann-

I had the predecessor model TS-120S which did not have the three WARC bands.
As I recall, it had a "stingy" S-Meter, but good strong signals would make it
move up upscale. Be sure you have a decent antenna attached. It would help to
compare it to another radio.

If you have access to a calibrated signal generator, expect approximately 50
microvolts to result in an S-9 meter reading. Going through the alignment
procedure in the service manual should show up where the trouble is. (You will
occasionally find the manuals on E-Bay.)

Yes, the S-Meter should swing upscale when the RF Gain Control is turned down.

Time to modify the LP filter on the output...ALL commercial LMR rigs
do that..some more than others....Midland XTR and Syntech IIs will
do 110watts on lowband (48MHz) but at 52.525 they drop back to 80watts
max at same current draw!!! The LP filters start to kick in at 51
or so MHz....if you change the caps in the LP output filter you
may find an improvement...also be advised some xstrs start to
drop off above 51 Mhz too..Ive seen that in GEs..

From a recent job description:

"Purpose:
Lead development of functional specifications and design of analog and digital electronic circuits that will be used in external and
implanted systems to perform power conversion, power transmission, control, RF communication, telemetry, neural stimulation and low
level signal processing functions. Lead development and execution of design control protocols and design verification procedures.
Experience with analog design. Analog and mixed signal ASIC experience. Experience with RF communications links. Knowledge with FCC
regulations, preferably including medical telemetry.
Antenna design experience very desirable. Good lab skills, ability to set up and make measurements important. At least 5 years
industrial experience in a commercial environment."

Hi Mike,

I have the same experience.
None of my homebrew interfaces for the FT-50 worked.
With the factory cable everything worked fine, i still wonder
what is so special.

That's certainly possible. However, nothing was said specifically to me
that that might be the case. If it were, I would have expected some
straightforward explanation of the situation. The jury has insufficient
information on that possibility.

2558. Yaesu FT-920 IMD question

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-20 03:14:34 UTC
From: jeff hamilton <jhamilton66@charter.net>
Message-ID: <um3d7a1ghdra03@corp.supernews.com>
Source record: 40269

The October 1997 ARRL QST Review of the Yaesu FT-920 criticizes the rig for poor IMD transmit test results: "Almost as disturbing as the prominence of third and fifth order products was the prominence of higher-order (i.e. seventh, ninth, eleventh products)...As we've said in past reviews, this is the kind of IMD performance that may lead to problems with splatter and wide signals, especially when the transceiver is used with an amplifier."

Has anyone experienced this problem recently? Has Yaesu improved the rig since 1997? I'm thinking of buying a used FT-920. Thanks,
Jeff

No problems with the rig Jeff...its one of the most popular out there in the used market and a bargain in the 800-850 class....wouldnt be afraid at all....other options in the price range include the ICom 746 and maybe even a 756....it a toss up in most circles, "WHATEVER I HAVE IS BEST" seems to be the key....since I have all three, I chose the IC 746, but just for the 2 meters and some could care less. Just one opinion among many you will get. 73 Murray

2566. Digital answering machines -- RFI

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-20 16:53:07 UTC
From: mlangen@execpc.com
Message-ID: <6658a6d3.0208200853.6ca5e1d5@posting.google.com>
Source record: 40277

I have tried two makes/models of digital answering machines, and both caused unacceptable levels (S 6-9) of hash on all bands (worst on VHF). Attempts with filters and ferrite chokes on both phone service and line cords yielded only a 1 - 2 s-unit drop in the noise.

Has anyone sorted out this kind of problem or, better yet, found a digital answering machine that doesn't raise hob with weak-signal work?

Thanks,

Mark -- WA9ETW

Back in April (when Icom still had a discount offer in force), I found the best price ($839.95 at the time: it wasn't on their Web site, but that's what they quoted in reqponse to an e-mail query) at Texas Towers. Having received conflicting reports about the desirability of doing business with TT, however, I made the purchase from HRO, who were willing to match the TT price.

Guess it depends on what they controll with them, but I'd expect if you get
it to read minus 30C, their heating system will charbroil them.

Would like to see a more technical response to your question as well
Jeff, other than "it's okay, no problem..."

Generally, ARRL doesn't criticize equipment too much in their reviews
(don't want to anger those high dollar advertisers), so I'm concerned
about this question as well since I'm looking at procuring a new rig in
the next few weeks and this is one of the candidates. Five years is an
eternity in radio business, so I would be very interested to hear if
anyone else knows if Yaesu addressed this problem on later production runs.

Dunno... I do know I have heard a few that sounded pretty funky. But
on the other hand, I've heard some that sound ok. I think the way
people run them has a big effect. But I can say, a friend of mine has
one, and it never has really sounded very good at all. Pretty
distorted sounding, etc. I don't know if it's pilot error, the mike,
or the radio, but I'd be wary...Those test results don't look too
good, but I wouldn't take that as gospel without further checking.
About half the 920's I've heard sounded pretty funky, so there may be
something to this. But I wonder about the other half that sound
ok...??? Less mike drive???Better alignment at the factory? There must
be a catch somewhere to avoid a lot of the distortion. The old icom
737's were another radio that were kind of like this. Many of them
sounded like caca. Distorted and weak thin audio. The 920's I've heard
that I didn't like, just sounded distorted for some reason. Not crisp
and clear like I expect. I know a crappy alignment can cause problems
like that. Maybe the funky ones were built on mondays and friday
afternoons...It's quite a bit of radio for the money, so if you found
one, and it sounded ok, with no distortion, I wouldn't really be
afraid to buy it. There is a pretty good demand for those, so you
could turn it if you didn't like it. MK

There are a few. Do a yahoo or google search for 706 CAT programs. The
fuctions are limited in the 706g. You can rewrite the memories no
problem, but you can't store the tones if I remember right. Thats a
real PIA if you are using it for VHF/UHF mainly...But it is handy as
you can rewrite the whole 100 memories in one swat. And these can be
edited as text files. You could have 100 HF freq's, or 100 rptr's, or
SWL, etc. Rewrite on the fly to suit what you want to listen to. I
have two or three different cat programs that will run the 706g. All
are free on the net. MK

2584. HF mobile noise problem.

Newsgroup: rec.radio.amateur.equipment

I have a 1987 Jeep Cherokee with a HF mobile setup. Looking for someone that has already beat the noise out of one of these Jeeps. Hopefully, I can learn from prior work on this car. Two clues: The in-tank fuel pump puts out a heck of alot of noise. How do you access the hot lead that feeds the pump, so I can bypass it as close to the pump motor as possible? Also, the main computer generates some noise. Less than the pump, but still S5. It also puts out a strong signal on 7.000 MHz. Any tips out there for his problem? Thanks. Jim

2586. PSK31 on HP320LX, anyone tried??

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-21 06:47:11 UTC
From: kl0an <pauljordan@gci.net>
Message-ID: <um6e16fmg4sv23@corp.supernews.com>
Source record: 40297

I'm looking to hook up my HP 320 LX into a PSK31 station with a PCMCIA soundcard, a rigblaster or equal, and then my ICOM 706. This will be a very small mobile PSK31 station. Has anyone tried this?? If so, some questions:

What software did you try and what were the results??
What PCMCIA Sound Card did you try and what were the results??
Any suggestions??

I know the HP 320 LX is a great little packet computer but, I want to try and go for something a little more useful.

Any help is greatly appreciated.

>Having received conflicting reports about the desirability of doing business
>with TT, however, I made the purchase from HRO,

Good move. If you do a search on deja.com for Texas Towers, you will find a history of shady dealings as far back as 10+ years... Two radio dealers you do not want to deal with is Texas Towers and Copper. Often they would both have lower prices than AES or HRO, but they've got bad reputations.

FOR SALE:

Crystal sockets for HC-6/U crystals.
If anyone would like some, I have about 10 or 20 of these available
for $2.00
each plus shipping

These are new parts. They are teflon and anodized metal.
They have two hole side mounting, with a clip that nicely holds the
crystal in place.

Great for repairing older rigs, or for homebrewing tube transmitters &
receivers.

These are NOT the same as FT243. These are for the similar sized
crystals that have thinner pins.

TERMINAL BOARDS
New first quality terminal boards.

For those who build, repair or service antique amateur
radio equipment and/or audio equipment etc.
the following will be very useful.

Top quality fiberglass and phenolic terminal boards
in several sizes.
These have 2 rows of turrets for mounting components
and making wiring connections, and four mounting holes in the corners.

A) Measuring 8-3/4" X 1-5/8" with 21 pairs of terminals for mounting
parts etc.
QTY 3 available at $4.00 each.

B) Measuring 2-5/8" X 1-1/2" with 5 pairs of terminals for mounting
parts etc.
QTY 10 available at $1.50 each.

C) Measuring 2-1/2" X 2" with 5 pairs of terminals for mounting
parts etc.
QTY 1 available $1.50

D) Measuring 2-5/8" X 2-1/2" with 5 pairs of terminals for mounting
parts etc.
QTY 3 available at $1.50 each

E) Measuring 2-5/8" X 3" with 5 pairs of terminals for mounting
parts etc.
QTY 1 available $1.50

101ZD was made at the same time the 901 was, just much cheaper, due to less features, the internal parts are much the same. A set of 6146's driven by a single 12BY7A in all three rigs. 902 was slightly later.
901'a didn't have WARC bands, but late model 101ZD's did. The 902 came with WARC bands installed. A CW keyer was also standard on the 902, as well as AM,& FM, whcih were options on the 901 and 101.
My choice; the FT-101ZD MKIII with AM brd, is the best "bang for the buck". I have owned all three, and the 101ZD was the "sweetest".

2606. Looking for Help with noisy Toyota Fuel Pump QRN

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-22 02:31:42 UTC
From: Larry Johnson <larryj@teleport.com>
Message-ID: <3D644C51.C5A1A75A@teleport.com>
Source record: 40217
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I have a 2000 Toyota Tacoma Pickup (4-cylinder, gas engine). I've been experimenting with several different HF rigs in it, but it's just about unusable above 40 Meters due to electrical noise from the in-tank fuel pump. I've read that Fords and Toyotas have a particularly bad time with this noise.

I've bonded most things - bumpers, tailpipe, hood, doors, etc. which have given me a good counterpoise and transmit signals seem to be very good. I've definitely isolated the noise to the electric fuel pump, and have had the tank lowered by a repair shop so that I could add bypass caps and toroids right at the fuel pump connections as described in the ARRL RFI book - no help at all. I also removed the long ground return wire for the pump motor and grounded it very closely nearby. The HF rig is also grounded directly to a nearby solid ground point.
Double-shielded coax is being run from the Hustler antenna to the radio.

I've contacted numerous other replacement fuel pump manufacturers and none can guarantee that their units are any quieter than the factory unit. They also all seem to be sealed so that the actual brushes can't be gotten to for putting caps on them. I've tried to find out about an external (not in-tank) pump, but no shop seems to want to tackle an installation job like this (as suggested on the ARRL Web page).

Sorry if this has been discussed before, I just subscribed to this newsgroup hoping that someone might have actually been successful fixing a noisy Toyota fuel pump problem. It seems that this should be a somewhat straightforward problem that bypassing, etc. out to be able to fix.

Thanks,

Larry

2613. Looking for datasheet for AP-8A

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-22 09:16:38 UTC
From: Igor <maillist@rts-ukraine.com>
Message-ID: <ak29ot$2ro6$1@pandora.alkar.net>
Source record: 40224

Hello All,

I am going to buy the multiband vertical AP-8A. I have an offer for reasonable price for 4 years old antenna which was not in use at all.

But I was not able to find any datasheet/description on cushcraft's web.

As far as I understood this antenna is obsolete now and R8 is a new model.

Can anybody send me an information on Ap-8A (bands, bandwidths, SWRs, maximum input power, installation requirements/restrictions, etc) as well as personal impression from this antenna.

Regards & 73,
Igor (ur5eoa)

I have for sale 1 full size "HY-Gain" beam 10 meters. fully assembled for your inspection. 13' Boom and longest element is 22' $100.00 I also have a steel tower totaling 25'. this is in 3 sections 1 10 foot st8 and 1 5foot st8 and 1 10 foot top section. I don't not have a rotator. $50.00. pickup only from Nashua,NewHampshire. I am selling these because they are to big for my new QTH. This beam has spent a large portion of its life in storage. 73's Jeff AA1GR

2615. Re: Difference between FT-101ZD, 901DM & 902DM?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-22 12:46:23 UTC
From: AD5IU <dummy@cris.com>
Message-ID: <z2599.91265$eK6.2878940@twister.austin.rr.com>
Source record: 40226

Thanks M.E., Good info

So the 101ZD was basically just a cheaper version of the 901? What
(standard) features were left out of the 101ZD that are present in the 901?
Since you prefer the 101ZD seems the extra features in the 901 weren't all
that useful?

The reason I'm asking is I currently have a 101ZD (pre WARC). It's still in
really great shape so I'm just wondering if it's worth the $$$ & effort to
'upgrade' to a 901 or 902.

Thanks again
AD5IU

2621. HM-98 Mic or Mic-Parts

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-22 14:54:44 UTC
From: Jason Dugas <jdugas@ems.jsc.nasa.gov>
Message-ID: <UW699.172$WZ7.17057979@newssvr17.news.prodigy.com>
Source record: 40232

For those of you who haven't had this experience, the HM-98 is the mic for the ICOM-2800H. Unfortunately, the PTT switch is based in a surface-mount chip on a printed circuit board inside the mic (that's all there is inside the mic). (also see previous post: Mic for IC-2800H -- tried fixing it, but working on surface mount devices with your hands is a little difficult).

The switch stopped working and I tried to purchase the component or even the entire board assembly that goes inside from ICOM and they said they would not sell me anything, except for an entire mic which costs $90.

Since I already have the mic's body and wiring, I wanted to see if anyone either had an old mic that I could use for parts or if anyone wanted sell me a used HM-98. Please reply to kb5urq@NO-SPAMhotmail.com or the email address I have listed under my profile on qrz.com

Thanks for any offers or comments,

Jason Dugas

From: Brian <n7qjb@no.spam.msn.com>
Message-ID: <3d659aef_2@news.teranews.com>
Source record: 40240

Greetings all.

I recently purchased a used radio and discovered too late that it had been owned by a smoker. Its a mobile and I have the remote kit, so I can mount the transceiver in the trunk, but the control head still reeks.

Does anyone have any suggestions on what I can do to get rid of the smell? I'm planning to take it apart and wash the plastic, but will this kill the smell?

Thanks,
Brian, N7QJB

One suggestion I've read: leave it out in bright sunlight for several
days, exposing the innards to as much solar UV as is practical. The
combination of heat and UV will break up some of the tobacco tars and
allow the odor-causing substances to diffuse away.

Ozone generators will eat the smell. Although really prolonged O3 will deteriorate insulation and such, you only need to "soak" it for a few hours. I've used these in cars to take out smoke and mustiness from wet carpets. Works great. Call your local rental shop.

Source record: 40244

Something that I have used that works is to put the radio in a plastic bag with some activated charcoal. This can be purchased at any store that sells aquarium supplies. I put a cup or two in a dish and leave it with the smelly item for two or three days.

2634. FS: 7 AIR VARIABLE CAPS w/pics

2638. FS: ALPHA 78 FACE & COVER

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-23 04:09:24 UTC
From: rong@computer.net
Message-ID: <3d65b506.2189770@news.computer.net>
Source record: 40149
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Hi All,

I just received a new face & cover for my old Alpha 78 from Crosslink. I will be installing them during my vacation over the next 2 weeks. The old face & cover have become quite sticky with age as all of the original 78's did. Is there anyone out there that wants to purchase the old cover & face ??? The lettering on the face is perfect. There are a few scratches at the top left screw hole where someone evidently had bad aim with a screwdriver, and a few chips on the edges. There might also be some rub marks under either the tune or load dials--I can't remember which one used to rub, but you can't see it with the vernier dials assembled. The cover has numerous scratches all around, but a paint job will fix that. There are NO dents in either piece. The cover should also fit the 76 series with 2 or 3 tubes and the 374A series. The only difference that I can see, is that this cover has vent holes for 3 tubes as used in the 78.

I once read somewhere that if you soak the cover & face in water overnight, the stickyness will disappear--whether that is true or not, I don't know.

If you are interested, please E-mail me at rong@computer.net or call me at 914 769 3114. Make me an offer that I can't refuse. Crosslink charged me $21.50 for the shipping, but that included the box & packing--I assume that it will run about $12 to ship the box anywhere in the lower 48.

Thanks & 73,
****

-----BEGIN PGP SIGNED MESSAGE-----

What value are the half dozen or so small incandescent lamps
scattered about the circuitry in the DataRadio? Nothing works
anymore, have to use a flashlight to read the display. Tried
measuring, read around 1.3 volts on my DVM, but a 1.5 volt bulb blew
up. The lamp circuit isn't DC it seems. Anybody know what to use?

Cheers!

2641. Re: Cigarette Smoke: How to get rid of smell?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-23 06:25:20 UTC
From: marcabsolutelynospam@laradio.spamfree.co.za
Message-ID: <3d65d430.272587@news.megaweb.co.za>
Source record: 40152

The best way to get rid of the smell (stench) is to strip the radio,
clean the casing with methylated spirits (be carefull with platic
parts) or soak the casing in warm water with dishwashing detergent.

Leave the rest of the radio in a shoe box with a saucer of Bicarbonate
of Soda powder for about 10 days. This will absorb the smell.

That's how you do it. Completely disassemble and wash all housing
parts in heavy duty cleaner and tooth brush, then scented dishwashing
liquid, rinse well with soft water. Use your nose throughout the process.
Then blow dry with compressed air, then warm them up over night.
Use your discretion on the boards. Beware of back-up batteries that
keep the power up. You will probably have to clean up pots after.

I have successfully done this with PBX station phones and handsets
although some mic elements didn't survive.

From: kinerm125@cs.com
Message-ID: <3e64731f.0208230723.4bc9c707@posting.google.com>
Source record: 40156

I just picked up a 10 meter HT for camping and hiking. The included rubber duck is pathetic, and it appears MFJ and Comet make whips for 10, focused on the FT-817 market. Anyone have experience with these antennas (doesn't matter what brand)? Thanks in advance,

Matt N3SOZ

Source record: 40157

Obviously the bigger the antenna, the better. A telescoping metal antenna would be a good choice, even if it has a loading coil, it'll be better than the rubber duck. I believe Radio Shack may sell one that is good. If I remember correctly, it might even get close to a 1/4 wave fully extended.

Source record: 40158

Hi There! I have for sale 2 (one pair) of Brand New batteries, HNN 9044A for Motorola Spirit Radios. This is the equivalent of the HNN9044 HNN9044A HNN9044AR HNN9056 HNN9056A and the HNN9056AR that are used in Motorola Spirit, Spirit Pro, Pro +, Spirit I, II, III, P10, SP10, SV series, SU series and all of the M series Spirits MV11, MV21, MV24, MU11, MU21, MU24 etc., etc., etc. If there is any doubt, email me! I don't bite! (No matter what my wife says!) These Batteries are brand new, have never been in a radio and were the extras when I bought a Master Pack to re-battery my 11 Spirits! The only fingerprints on the HNN9044a's are mine. If your batteries are more than a couple of years old they are nowhere near their original capacity and longevity. Motorola dealers say they should be replaced yearly with daily activity and BI-yearly for stand-by use. Most of my batteries where less than 3 years old and would not last an 8 hour shift! These batteries retail between $30 to $52 each. Here is your chance to pick up a couple for the price of one! The HNN9044's are Brand New right out of the Master Pack! And are FRESH! They are 100% functional!

$30.00 for the pair. Multiple pairs are available! Please Figure 6.00 for USPO Priority anywhere in the USA. For up to 10 batteries. Nothing will be DOA! Please use Pay Pal or a USPO Money Order for Payment. Please email me with any questions, Have fun! .... Brian, WD9HSY BBEDOE@AOL.COM

Brian, WD9HSY....South Chicago Suburbs.....

The little "grain of wheat" lamps that Radio Shack sells are almost a direct
replacement. 12vdc 40ma I think.

That's what I used in both of mine and they worked great.

Isn't there a "carrier" control on the front? Never owned one but that is
what I would look for.

Ken,

They are 12V lamps. You can get replacements at Radio Shack. Find the 12V feed to the lamps and put a 50 ohm 1/2W resistor in series with the lead to the lamps, they will never blow as long as you own the radio.

2661. 220 mhz transverters?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-24 00:56:38 UTC
From: vhfradiobuff@aol.com
Message-ID: <5e5fccab.0208231656.15db765a@posting.google.com>
Source record: 40170

Does anyone know of any transverters to allow me to get onto 220 mhz other than the Down East versions? I have a Yaesu FT-100D, so the exact band it uses for the IF is not important.

I have another question... why do the Down East transverters require such a low input? The TenTec ones can accept much higher inputs, up to 10 watts!

Hi John,
S/N 208xxxx to S/N 309xxxx, VR22 on Signal unit (large board on bottom,
right behind the large filter space). S/N 310xxxx and up, use front panel
carrier knob. I have modified the early ones to use the front panel knob.
Don't remember details offhand, but it took one diode and some wire. Hard
part is taking the board out.

> Ground in shipping) for four months and I have yet to see an estimate.

Ken,
I've always found Yaesu service the best of the "big 3", until recently.
My experience was also with an FL-7000. I needed a relay to repair shipping
damage to a customer's unit. I have no service manual, so couldn't look up
part numbers myself. First try, they sent the wrong relay, and could not
sell me a manual so I could look up the part myself. After a couple months
of phone calls and promises, I returned the amp to my customer un-repaired.
For anyone in the repair business, that amounts to hours that produce no
income.
I understand they have recently moved and are having problems. I hope
they will return to their previous level of service.

Need advice where to buy Telex Telethin (or equivalent) Earset components. Specifically the Telex or equivalent: cord, CMT-95 (60013-073) 5' straight cord with sub min .097 plug.
It gauls me that Telex lists this item for $20.

2668. Help with ICOM-2100H

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-24 11:24:49 UTC
From: 7hj <ea7hj@hotmail.com>
Message-ID: <ak7qjr$1gl75b$1@ID-151081.news.dfncis.de>
Source record: 40177

Hi:

I have problem with my IC2100H.

The problem is : NO POWER OUT. ALL REST IS OK (Reception OK - All Funcions OK).

When I key the PTT and speak into the microphone, I ear
my voice on a nearby receiver tuned to the IC-2100H transmit frequency.

The VC tension +13.8 is OK. When press the PTT the current drain is very little.

In Pin 2 (Power control PIN) from the SC1091 (SAV17) no have tension.

Very important:
If I connect +13.8V to the Pin 2 (power contril pin) of the SC1091(S-AV17) I see watts on the wattmeter and the current drain is about 8 Amp and the transmitter is OK.

I am in this situation at present time.

My great problem is I don't have schematic for the IC2100H and is very difficult to repair without him.

Thanks for the help in advance.

Very Sorry for my english. I don't speak english.

EA7HJ - Antonio

Source record: 40179

Go to Icom's web site http://www.icomamerica.com click on search and enter BON-CS40. This will take you to a page that describe the software. The software is both radiocontrol and decoding(WEFAX, RTTY, CW, etc.) The software is Radiocom 4.0 from Bonito. The manual is poorly translated to English from German. This software also requires a "dongle" plugged into the serial port. A version 5.1 is also available from Bonito that has a LOT more features and is actually pretty useful. The DSP features of the software are fairly impressive, however if its just radio control you are interested in it's hard to beat TALKPCR.

Hope this helps.

Well, for one thing...it's a lot easier to attenuate 10W down to 10mW
than it is to boost 10mW up to 10W!
And some rigs used for IF have taps in the TX/RX chain that are at the
mW level, so it makes interfacing those rigs very easy.

2684. 15 Meters with a RCI-2950DX ???

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-24 18:23:52 UTC
From: bbwolf@mailcity.com
Message-ID: <eb75e023.0208241023.1ac9b89a@posting.google.com>
Source record: 40195

Greetings,

There is a modification on mods.dk which supposedly enables 15 meter operation with the RCI-2950DX 10/12 meter Dualband. I was wondering if anyone on this forum has tried this mod, and if so what were the results. If this works it would be great as 15 meters is my favorite band and I really don't want to spend $1000+ dollars on a multiband Amateur transciever just to have 15 meters and end up with it stolen out of my vehicle.

73.
Rich

Hi there!

Our new Magnetic Loop Website are now in english available.

http://www.magnetic-loop.de

There were a lot of request to us, to setup the software to english
language.
This is now done. There is also the e mail notification now working, if
someone replies
to your message inside the board. For this you have to register with
username and
password...a very useful function , if you re not every day there.

We would be happy to get your questions, hints and information in our Board
:-)

just visit our NON commercial and no ads website http://www.magentic-loop.de

Thank you very much :-)

Andre

2687. FA: N2DAN MERCURY KEYER - RARE!

Hi All,

Now that I've completely decommissioned my station, sold my tower, HF antennas, rig and amp, I am offering my gorgeous N2DAN MERCURY KEYER for sale.

This is a very rare and collectible ORIGINAL iambic paddle made by the late master Steve Nurkiewicz, and is a rather high-budget investment.

It is currently up for auction on ebay at:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1375125135

Thanks for looking!

2689. ADMS and USB?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-25 00:13:00 UTC
From: kc1ih@attbi.com
Message-ID: <umg88e941v8m1c@news.supernews.com>
Source record: 40100

I'm considering getting a new laptop, and have noticed that many of the new laptops do not have a serial port.

Does anyone have experience using USB to serial converters with ADMS software? I will want to use it both with the FT-50 and the FT-7100 software.

Thanks for your help.

Source record: 40101

I am looking to purchase a new HF rig in the $1000-1200 or so range. I have already out the low end models of Kenwood, Yaesu and Icom. (ts-50, ft-840, icom 718,706 etc) I can't go much more into the high end spectrum either. The two I have narrowed it down to are the Kenwood TS-570SG and the Yaesu Ft-920. These two seem to be the only ones in the mid range and seem pretty close in features..auto tuner..6 meters. Spec wise they seem pretty equal also. Anybody have any input on these choices or have used or owned them? Or any other ideas? I know I could get a little more if I went for a used..Icom 746-756 or Ts-870, but I got burned once and just rather get a new one this go round. I will appreciate any feedback as I am getting close to purchase and both above radios have a bit off on them now till end of month on Kenwood and end of Sept on Icom. Thank you all....

>than it is to boost 10mW up to 10W!
>And some rigs used for IF have taps in the TX/RX chain that are at the
>mW level, so it makes interfacing those rigs very easy.

How come TenTec can make transverters that accept up to 10 watts input and only require that you plug the coax in, whereas Down East makes these things that requires mear mW input levels and all kinds of funky connections at a considerably higher price?

Do it all the time. One of my computrs has nothing but USB and
Firewire. The biggest problem with ADMS is the lack of
proper testing and lousy disk reproduction, Several folks
I know have had to send back bad disks and/or get updates for
newer operating systems.

If RT spent as much time on the code as they do on copy protection
they would have a much better product.

For one thing there is a lot more risk of IF feedthrough at 10 watts.
Also, you risk having the IF rig inadvertently set at other than 10 watts.
What you are really looking at are different design philosophies.
It would be interesting to see technical reviews of both. Before
knocking either one, I would want to set the schematics and specs
of both models and the IF radio down and see what works best.
Will you be using a masthead preamp? or perhaps a masthead
transverter? How will you key the whole affair? Before asking
which is better, try asking all the rest of the questions first.
Attention to detail usually wins out, but there is a place for
inexpensive and expedience too.

Thanks to all who responded...

I'll check out the 12 volt bus, if I can see that well in that board.
Things are getting smaller as I age, it seems. Dunno what my meter
was reading. Those grain of wheat lamps look like exact
replacements. Thanks for the tip.

Now, then, any insight on why the VFO occasionally changes into the
300 MHz band? Memory channels stay put, but when I switch over to
VFO, I'm off in Never Land. Have to reset the thing in order to
regain VFO in the 140 range. Is this associated with the cliped loop
mod?

2706. Re: Help with ICOM-2100H

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-25 21:14:14 UTC
From: 7hj <ea7hj@hotmail.com>
Message-ID: <akbhcv$1gk4lu$1@ID-151081.news.dfncis.de>
Source record: 40117

Hi:

I have problem with my IC2100H.

The problem is : NO POWER OUT. ALL REST IS OK (Reception OK - All Funcions OK).

When I key the PTT and speak into the microphone, I ear
my voice on a nearby receiver tuned to the IC-2100H transmit frequency.

The VC tension +13.8 is OK. When press the PTT the current drain is very little.

In Pin 2 (Power control PIN) from the SC1091 (SAV17) no have tension.

Very important:
If I connect +13.8V to the Pin 2 (power contril pin) of the SC1091(S-AV17) I see watts on the wattmeter and the current drain is about 8 Amp and the transmitter is OK.

I am in this situation at present time.

My great problem is I don't have schematic for the IC2100H and is very difficult to repair without him.

Thanks for the help in advance.

Very Sorry for my english. I don't speak english.

EA7HJ - Antonio

This is a Radio Shack 2-meter power amplifier for your HT. 5 watts in will give you 30 watts out. It has only been used once for testing out. I bought it new for my son & he never used it. Comes complete with original box, instruction book, mounting bracket. Paid $80 for it. My price is $50 shipped to the lower 48.

Brian,
I agree with the others on the dissassembly of the unit and a thorough cleaning. I used Spic-n-Span Cinch on my IC-471a and it did a great job. Removed and washed the pcboards using an acid brush(plunbing aisle at local home improvement store), used a rag for the wiring harnesses, and squited the Cinch directly onto the case. Rinced everything with isopropyl alcohol. The radio's been working great for 5 years now and no cigarette smell at all. (the whole process took me all day, but I had to do the whole radio.)

The one on Friday (I think) showed what looked like an amateur HF rig... anybody know what kind it was? From the looks of it it's got quite a bit of rocker switches like the ones you find on KW rigs like the TS930, but the construction looks a lot like the more recent Yaesu rigs.

Could also be a commercial line rig, however I think you'd have a harder time coming across one of those in Afghanistan than you would an amateur rig.

BTW, anyone manage to make out the numbers on the display from the tapes? From what I could see there were 4 digits...

As to your lamp problem, if you're planning to install a dropping resistor inline with the lamp anyway, I would recommend using the white LED that Radio Shack sells along with the appropriately valued dropping resistor. It will cast a sharper, whiter light upon your dial rather than the less-contrasting yellowish incandescent type light.

Be sure to use some sandpaper to rough up the LED lens so that it doesn't project a spot....you could also try covering the LED lens with a small piece of opaque tape, like white fiberglass electrical tape, that would allow most of the light to pass through while diffusing it.

I did this with my old ICOM 745 after it blew through a couple of those wheatgrain bulbs (though they each lasted a long time). Now it looks great and I don't have to expect to replace it again.

>which is better, try asking all the rest of the questions first.
>Attention to detail usually wins out, but there is a place for
>inexpensive and expedience too.

Well, the Tentec transverter is actually factory set for 5 watts input, with 10 watts output, although it can be adjusted to accept up to 10 watts input. One advantage to this is that you can continue to use the IF rig for it's original purpose without reducing the input to 500mW or some other incredibly low output. For example, I could hook up the 2m to 6m transverter from Tentec in my car, then all I have to do is hit a button to bring my dualband FM rig to 5 watts output, tune to a 2m frequency and turn on the transverter and I'm on 6m! With the Tentec transverters, all that is required to key it is RF. The antenna plugs into the transverter and then the transverter plugs into the radio's antenna port. It's that simple. Unfortunately, Tentec doesn't currently make a 220mhz transverter, although it is rumored that one is on the way.

Actually, there were 5 digits. After reviewing the video, I saw that the
display said 27.555 USB. A certificate could also be displayed that indicated
that bin Laden's callsign was 234AT001. Not sure what that means though.

If in fact that is true, 27.555 USB is the International call frequency for the Alfa Tango 11m DX group, hence the "AT" in 234AT001. And to think the American government spends countless millions of dollars each year on survellience equipment, when all they really needed were some old modifiable Radio Shack 40 channel sideband CB's!

2733. FS: ALPHA 78 FACE & COVER

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-27 00:49:07 UTC
From: rong@computer.net
Message-ID: <3d6acc79.1563887@news.computer.net>
Source record: 40144
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Hi All,

I just received a new face & cover for my old Alpha 78 from Crosslink. I will be installing them during my vacation over the next 2 weeks. The old face & cover have become quite sticky with age as all of the original 78's did. Is there anyone out there that wants to purchase the old cover & face ??? The lettering on the face is perfect. There are a few scratches at the top left screw hole where someone evidently had bad aim with a screwdriver, and a few chips on the edges. There might also be some rub marks under either the tune or load dials--I can't remember which one used to rub, but you can't see it with the vernier dials assembled. The cover has numerous scratches all around, but a paint job will fix that. There are NO dents in either piece. The cover should also fit the 76 series with 2 or 3 tubes and the 374A series. The only difference that I can see, is that this cover has vent holes for 3 tubes as used in the 78.

I once read somewhere that if you soak the cover & face in water overnight, the stickyness will disappear--whether that is true or not, I don't know.

If you are interested, please E-mail me at rong@computer.net or call me at 845 526 3221. Make me an offer that I can't refuse. Crosslink charged me $21.50 for the shipping, but that included the box & packing--I assume that it will run about $12 to ship the box anywhere in the lower 48.

Thanks & 73,
****

I recently picked up a TS700SP in really nice shape, however the external VFO that I got with it doesn not work. There is nothing coming back from the VFO to show frequency on the TS700SP dial. The VFO looks like new. I'm wondering if there's anyone out there that has had experience with these, and might be able to point me in the right direction.

About 34 years ago, I was active on CB (and actually had an FCC license). At that time I recall an operator with a very distinctive southern drawl working skip from the "mountains of Jamaica". I since learned that Johnny Cash actually has a villa in Jamaica (undoubtedly in the mountains as that is the islands normal topography). I have since wondered if that was in fact his voice I heard that day.

Greg, Ken, and others, be careful what you post regarding Yaesu
in this forum if it is not flattering. My earlier contribution to this
thread resulted in my receiving an e-mail from them stating that
my comments were "actionable," and that similar statements in
the future would result in them seeking counsel. A followup
e-mail to them brought only a meaningless and empty response.

It is sad to note that my comments came from the horse's mouth
(the folks at Yaesu service), and that everything else that I have
posted about them over the last ten years has been highly
complimentary. I have recommended their products to others,
and several folks now get into my six meter repeater with VX-5Rs.
What an odd way of saying, "Thanks for being our life-long customer."

Ah yes, the old Hazeltine 1510. I have three or four at my house, and the manuals for them. Here's the necessary settings for the DIP switches just to get you going.

Three banks of switches, from left to right, D means set towards the keyboard, U means towards the CRT.

Left bank: U U U U U U D U sets the speed to 9600 baud. Only one switch can be down at a time. Towards the left are lower baud rates; the right-most switch is 19,200 baud.
Middle bank: U U U D U U D D sets the unit for standard full-duplex RS-232 and no translations.
Right bank: U U U D U U U U sets ESCAPE as the lead-in character; set them all U for TILDE as the lead-in character.

The terminal normally comes up in DIM or background mode. To get it to be bright, you need to program it with a specific sequence of characters that depends on the lead-in character you've selected. There's not much else special about the unit except the video electronics mounted to the top of the cabinet tends to get quite hot.

I usually jumper the male DB-25 connector pins 4+5, 6+8+20. The terminal transmits data on pin 2, receives data on pin 3, signal ground is pin 7, chassis ground is pin 1.

If you need more info, I could make copies of necessary pages from the operator's manual. I bought one new in 1978 for $850, and that was cheap back then. Any more questions, please don't hesitate to ask. Good luck with it.

Bob M. WA1MIK

I would tell them bring it on, bring your whole damn bunch of lawyers. I suspect that more than a few folks could back up your position. They would have to sue you in a court in your home state. The local folks here are real likely to give a judgment to a left coast big business that gave crappy customer service, then threatened to sue if you said any thing...

And if any one from Yeasu finds a problem with this, e-mail me and I will forward the address for service.

Actionable my hind-parts.

Boy, that's a bit of history there! What you have there is a dumb terminal. It doesn't have any packet capabilities without a Terminal Node Controller (TNC). If you do not have the manual for one, you might be able to find some data on it by reverse compiling the termcap files on most unix or linux style operating systems.

Many of us used to adjust the prompts from the TNC gear we were using to make the display a bit prettier, but that's about all I remember of the Hazeltine. My brother used to own a Hazeltine 1400. So I do remember something about it, although it was around 25 years ago...

If I were you, I'd try to find something a bit more recent to use for packet work.

Hi to all,
I am in need of the two main tuning knobs for a NC-125, and three of the small knobs. NC-88, NC-98 and others are the same. Need an S meter for the NC-125 as well.

Also need a manual for a Gonset G-63.

Any help will be appreciated greatly

Thanks es 73 de

2754. National NC-173, 183, 183D dial scales

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-27 20:16:00 UTC
From: rockseaent@aol.com
Message-ID: <20020827161600.03682.00003935@mb-fq.aol.com>
Source record: 40062

We are looking at the possibility of making reproduction dial scales for the National 173, 183 & 183D. Part numbers M696 tuning scale, M968 logging scale and R30Z (?) s meter scale. (That s meter part number is hard to read.. please send correction if you can)

If you would be interested in a set of these dial scales please send an e-mail to: dials@juno.com and include your radio model.

Thanks, Mike

I am not a lawyer nor do I know what you posted, but I doubt Yaesu
can do anything to you or anyone else for what you post in this
newgroup, good or bad about them. Yaesu does not own this newsgroup.
It sounds like to me that they tried to scare you and it appears they
succeeded. This is probably all they were after. I would dare them
to do that to me as it would end up being their worst publicity
night mare they have ever seen. God forbid, I would most likely
end up owning Yaesu when it was over.

Regards,

James

I used one for packet years ago. All you need is a TNC, and the teminal will
display well, but you can't save anything to memory, but you can print it
out with you printer.
Perhaps a KAM would work nicely.

Hello,

I have one of these nice vintage power triodes in stock. Heater is 10V
4.8A, anode dissipation is 65W and max anode voltage is 1600V. The
valve is NOS and in its original box. You will find a picture and more
data, and even order it - from my web site: www.demostenes.no
Just search for RS 31g.

Hello,

I just bought this radio at a hamfest the other day. I have read varying opinions on the net about it. However, for the money, it seems like a decent 2m/440 radio.

Anyways, my question is this. While on the AIR band in AM mode, why does it seem that you can't fully disengage the squelch??? On FM, you can turn the squelch all the way down and get white noise. However, in AM, it seems to always be there (no turning it down or off to get white noise and static). Futhermore, the display shows the message "Busy" and you can see some meter activity, but no breakthru YET you can get hear just fine those signals that go beyond a certain signal strength.

Am I missing something here? Do I have a problem with the radio? Is there some other parameter or mod to address this?

Thanks very much.

Mark

I have a pair of 207's and both perform exactly like yours. I also have
a pair of T7's which do the same. And two different HF xcvrs which do
the same thing when I switch from AM to FM. The white noise with the
squelch open on FM is MUCH louder than on AM.

While writing this I decided to try a scanner, and changing modes on my
Radio Shack scanner causes exactly the same effect.

Unless I am missing something I think your rig is performing just fine.

I find that I have to listen carefully to hear the noise if I turn the
squelch down, a better clue is that the "Busy" indicator comes on when
the squelch is open.

Get a cheap generator and a resonable freq counter to set it. You will find the combination works well for alignment purposes. You might want to build the resistor attenuator in the handbook as well.

Now if your into measuring noise floors to the inth DB forget the above advice.

For HF, the lead inductance shouldn't be terrible. But obviously, don't
use standard wirewound power resistors. Watch the tolerances, too; one
10%-low resistor in the bunch will pop quickly, making very little
difference in resistance (52.6 ohms) but now spreading 200 watts over
"190 watts of resistors".

Josh - there's no magic here, but there are some things to be careful of.

Many higher power resistors are inductive, you need resistors that have a very small inductance at HF - and be sure it's at HF. For example, Radio Shack sells some "non-inductive" resistors for audio use, but they exhibit significant inductance at RF. This will cause your dummy load to exhibit some surprising impedance, certainly not 50 ohms.

As if that's not enough, you need to wire them together in such a way as to not add your own inductance. At 80 meters, you can probably be pretty sloppy and not have a problem. But at 10 meters, you will need to think about how you arrange those resistors to keep the lead inductance down.

Finally, there is the issue of heat. A 10 watt resistor won't stand 10 watts if it can't cool itself because it's surrounded by other 10 watt resistors trying to cool themselves.

So sure, you can build your own dummy load, and it really isn't hard, but you do need to think about it a little. If you just throw together twenty resistors chances are you'll have a problem.

..

Hi,
i've used various resistor
and, of course, no-inductive one are the best;
but you can use common resistor in parallel (the more in parallel, the
better is)
to make parasitic inductance lower;
take a look here were there's a table with some measure made with my MFJ259

While you might be able to do what you need to do with the heathkit youmight want to see if you can find an older surplug generator. Also look for a HP 608 or 606 depending on the range you need to cover. They can be found for under $ 100 in some places. Also some older service monitors on e-bay may be what you are looking for.

I have used the old heathkit in the past to setup vhf receivers but it is a pain to use.

2788. Help: VHF Network setup

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-28 17:47:45 UTC
From: Nomad <classified@nospam.com>
Message-ID: <3d6d0c2f$1@news.psinet.cl>
Source record: 39999

Hello everybody on the Unet
I am no radio amateur, but still hope to get some answers to this problem.
Please be patient if my jargon is not right or the questions are too basic.

I have a setup of 4 VHF (144Mhz) radios, 1 Kenwood mobile (base station AC powered), 2 Motorola mobiles (called stations) and 1 Kenwood portable. I have a set freq. of 150.085 MHz. Both Motorola (used as fixed stations with AC power) are programed to that frequency and currently I have no means of programming them (they have two programed channels, have a CH button and a MON button). Following happens:

Kenwood base station: tx and rx all other radios.

Motorola stations: tx and rx each other and the base station.

Kenwood Portable (TH235A): rx all signals, but only Kenwood base station can listen
to its tx. Motorola stations cannot hear portable although receive busy signal (MON /BUSY led flashes).

No DTSS or other tone encoding is programed on the Kenwoods. I do not know about the Motorolas, but they operate perfectly well with the base station and with each other. I have set tone to 97.4 Hz on the Kenwoods, anyway I use no repeater. The Motorolas should not be programed to split freq, because they rx signal (so it is a squelch problem?) and work on single freq with base. What could be the cause of this behaviour? I am no expert on this kind of stuff, althogh as an engineer I am technically fit to understand.

I do not have all the model numbers with me now but can get them if necessary. I
do not want to make guesses now.

best wishes

Nomad

There have been a zillion articles written on this subject. Check the ARRL handbook,
or about any issue of any ham magazine.

Short answer is, "what do you want to do with it?"
If all you want to do is see if you're getting output, a 120V light bulb will do.
If you want to make measurements, you need a resistor.
If you want to make measurements that you trust, you need a resistor you can trust.

The higher you go in frequency, the worse your problem becomes. AT HF, it's certainly
possible to cobble together a bunch of resistors, but it's not trivial. The equipment
you need to do it right will cost you WAY more than a real dummy load.

Inductance is your enemy. You need non-inductive resistors. Wire-wound will NOT do.
Power ratings are based on some estimate of heat sinking. For wire lead resistors,
that usually means soldered into a ground plane. IF you bundle a bunch together,
they will get too hot at rated power. Different types of resistors handle short term overloads
better. Carbon composition are pretty good at that, so if you only need to power it
for a few seconds at a time, you can get by with fewer resistors and a big fan or an oil bath.

Go to a swapmeet and buy a dummy load. Unless you already have the non-inductive
resistors, a swapmeet cantenna will be much cheaper.
Take your meter and measure it before you pay.
I don't know of any failure modes that would cause the dummy load to fail at RF and still
check good with an ohmmeter. Again, if you don't need accurate measurements you
can get by with a resistor that's a few ohms either way of 50. But you shouldn't pay much
for it. There are a LOT of BAD dummy loads for sale at swapmeets.

sounds like you need to set the tone on the portable to the 97.4 its the only one not being received by the others and they all have the tones set so set the portable to transmit a 97.4 tone and to receive a 97.4 tone and all will be fine

2791. Standard HX240U cloning cable question

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-28 18:48:32 UTC
From: wd5jbc@att.net
Message-ID: <1247cbb3.0208281048.990e961@posting.google.com>
Source record: 40002

Hi all;
I've obtained several Standard HX240U handhelds, and want to set them all on the same frequencys. I know how to program them manually (without the PC interface) but it is very time consuming. I noticed that a cloning cable for the HX240 is listed as an accessory.

Does anyone know how this cable is wired and how to set the radios up to transfer data from one to another?

The cable appears to be a 'straight through' cable that goes into the mike connectors of the radios.

Any help would be most appreciated;

Thanks!

Josh...
Just my 2 pence worth, but...
20 years ago I made a dummy load thus.
Twenty 1k 2 watt carbon resistors, 3 inches of RG11, two pieces of copper clad board cut into 2 inch circles with one inch holes on the center.
The two rings were drilled with twenty holes and the resistors soldered between the two.
One end was soldered to the inner conductor of the RG11 which was run up the center and at the other end, the braid was soldered.
A suitable 50 ohm connector was then fitted.
This was used at low power on a homebrew 10 m rig with no ill effects and on literally hundreds of CB rigs for tuning.
I give this recipie only as a guide as to what may be possible, but no guarentees.
Good luck and cheers.

2795. Need help and Schematic for old HT Kenwood TH-41AT

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-28 19:57:10 UTC
From: John Buck <kh7t@arrl.net>
Message-ID: <3D6D2B10.7090108@arrl.net>
Source record: 40005
Cross-posted to: rec.radio.amateur.equipment,alt.ham-radio.vhf-uhf

I have an old TH-41AT 440mHz handitalkie that works fine on simplex and on a minus shift, but does not transmit properly on PLUS shift.

The symptom is that when PTT using + shift the red transmit light comes on for about a second then goes to a dim glow. No RF is transmitted. The Current also drops off after the 1 second.

It will transmit fine on simplex and minus shift anywhere in the band. It just will not do + shift even from the low edge of the band.

The switch seems OK.

Any ideas? A copy of the Schematic would be greatly appreciated.

Aloha,
John KH7T

Source record: 40016

Dick,
It is intended to match a mobile whip on a single preset frequency for each band 80-10 meters. It receives band info from most Icom transceivers (a voltage which varies by band). It should work for any short end-fed antenna. It is not an "auto-tuner" except in the sense that it automatically changes bands with the transceiver.
Adjustment to the preset frequency is done with a series of trimmers and movable coil taps for each band.
I ran one mobile for years with an IC-730. It worked well on 40 thru 10 meters. On 80 meters it seems most of the signal is radiated inside the box--hi.
A good case ground on the AH-1 is critical.

Source record: 40018

the offset/scan button allows you to set the offset either -/+ 600 for
repeater operations and the scan button allows the rig to scan either the
memory channels or the band
as for a PLtone i am not sure but i dont think that radio has a tone
board as an option there are 3rd party tone boards that my work and you
just follow there install instructions

2808. Transporting Handheld Radios

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-29 05:49:35 UTC
From: Jerad Hoff <fubar@yuck.net>
Message-ID: <fubar-09A481.00493429082002@news.mpls.visi.com>
Source record: 40019

I apologize if this is the incorrect forum for this question.

I've searched high and low through google.com's database of web sites for a carrying case/bag that is designed to carry several portable (HT) radios.

I can't imagine I'm the only guy who occasionally needs to bring along more than one HT. For some emergency response volunteering I do, I occasionally need to bring 4-5 full sized handhelds along with 3-4 FRS radios that are always handy to have around.

One company has some great backpacks for carrying mobile radios:

http://www.powerportstore.com/

But nobody out there seems to have anything for handhelds.

Does anyone know of any companies out there that sell what I'm looking for? Am I the only one looking for this kind of case/bag?

Thanks!

- Jerad

I've only needed to carry one handheld, so I use a tiny metal first aid
kit.
Real sturdy box. Gasketed against water. Cut some foam for the inside and
voila,
indestructable carry case. Also works for palmtop computers.

They make pretty big first aid kits.

the offset for the +/- 600 is a button on the face. I was speaking of
the switch thats on the upper right that has the letters F B V on both
the right and left side of the switch. Where can one look for 3rd
party tone boards.

thanks

Hello Joshua,

Look at the one I made: http://www.qsl.net/ct2gqv/dummy.html
Handles about 50W from transceiver (in AM mode) and 100W SSB for about
3-4 minutes without overheating to much.
Next step is to fill the can with OIL to dissipate better.
Good from 1 to 30Mhz but very bad at 144Mhz (probably because of
resistor nature), strange is that at 440Mhz works fine (eg: low SWR)

Regards,

Ricardo Martins / CT2GQV

2815. 572B tube orientation question.

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-29 13:16:49 UTC
From: Magma <ve3gid@rac.ca>
Message-ID: <59pb9.10270$V21.219165@news>
Source record: 40026

If anyone has an answer I'd appreciate it...

I have an FL2100b and changed the 2 x 572b tubes in it. Ofcourse I didn't look when I took them out now I'm stuck. This is a 4 pin tube, non polarized, ei: they can go into the socket any old way.... any ideas which way,? does it matter?

FRANK
VE3GID@RAC.CA

2816. Kenwood TH78 and TH-F6A sensitivity issue.

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-29 13:26:49 UTC
From: Joel Dorfan <bdorfan@fred.icon.co.za>
Message-ID: <3d6e2122$0$18851@hades.is.co.za>
Source record: 40027

I have the TH78 and a friend has the 6A. The 78 has been modded for extended receive and the 6A is specd. at having a .1 to 1Ghz receiver.

407.8375 comes through loud and clear even while mobile but 407.9375 and 411.650 is really poor. All signals come from fixed repeaters. When we place these two radios alongside a THG-71A the 71A is loud and clear on these frequencies but the 78 and 6A bearly break squelch and the signals are very scratchy.

Why do 2 frequencies so close to each other have two toally different levels of sensitivity? Why does the 71A outperform the other 2? The 78 is at least 8 years old but the 6A is a current model, what gives?

Never saw a "radio" bag. But if you go to a big camera store, you'll see a lot of bags for carrying camera equipment. Some of them have foam inserts, and you can custom-snip the inserts to hold whatever pieces of equipment you want to transport.

Hopefully, you can keeps costs below $40. Otherwise, you might as well buy the MFJ/Ameritron version of the Cantenna dummy. It runs about $40 w/o oil, about $60 w/oil.

I had the original Heath Cantenna, and it just had one big resistor in it, surrounded by mineral oil I got at the drug store.

look in AESs catalog the have an advertiser who has those tone boards
also do a google search for vintage manuals and see if there is a site who
carries the manual for that old azden
good luck

For Sale:
Yaesu FT-100 in perfect condition without a scratch or mark.
This opperates all modes (SSB, FM, CW, RTTY, and AM) on HF (160-10M), 6 meters, 2 meters, and 440 Mhz and receives continuous coverage from 100 khz to 961 Mhz (cell band blocked). It is also capable of transmit in other bands making it useful for MARS and other uses. This will proove useful if the new bands are really added.
Never used mobile.
CTCSS Tone squelch board (FTS-27) was purchased and installed.
Also included is the Mobile Remote Head Bracket (MMB-62), the Quick-Release Mobile Bracket (MMB-67), Seperation Kit (YSK-100), and the original handheld DTMF mic (MH-36B).
The manual, schematics, original box and all original literature are all like new too.

The price is $600 plus shipping costs.
I live in Greenville, SC zip code 29615 so that you may figure the shipping.

hi guys
i have a toshiba 486dx25 laptop for sale
this computer is in good working condition with the following details
28 megs of ram
1.8 gig hard drive loaded with win98
working battery
AC power cord
2 PCMCIA slots populated with a network card and a 33.6 modem
carrying case
network cable phone cable
mouse
trackball
color screen

this computer would be great for portable packet or logging QSLs while
roving or as a logging computer in the ham shack
i am asking $135 plus shipping
if interested please email ASAP
thanks

Kenwood makes just such a kit, including the radios. I don't know
if the bag is available separately. I have a couple hard shell briefcases
with removable foam for such things. Just right for the HF too.
Used to run the rental angle too, with 25 GP300, batteries and
chargers in a larger hard shell transport to be shipped anywhere.

Josh
When all else fails check out the Ten Tec web site.
Here is a link to a 300 watt dummy load 'kit' they sell:
http://www.tentec.com/amaccyKit.htm#1203store
best of all they sell it for $29.

Last time I looked (a long time ago) the 572Bs that I put in my 30L-1 in place of the 811As would only go into the sockets one way.

Did you assume (ASS - U - ME) that they went any old way or did you actually try them?

I suspect you'll find they will NOT go in any old way. And, of course it matters!

Good luck!

I have a nice Kenwood TS450SAT HF radio for sale.
Included is mic, Manual, Power cord.
This radio has lots of nice features and has a great automatic antenna tuner!!
Radio is in very good condition and from non smoking enviroment.
Price is $495 plus the cost of shipping/insurance to your QTH.
This is my bottom dollar price and a very good deal for a nice radio!! No trades please.

If interested, reply to:
baycity@pacifier.com

Thanks for looking.....

2837. Pyramid SWR-14 Meter questions

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-29 17:34:24 UTC
From: Cory Papenfuss <papenfuss@juneau.cpes.vt.edu>
Message-ID: <aklluvcqd1@solaris.cc.vt.edu>
Source record: 40047

Hello all... I finally went out and got an SWR meter for my antenna needs, and I'm not convinced it's working properly. I've been trying to tune an antenna on my airplane (118-136 MHz), so I got this meter that says 1.5-150 MHz range. When connecting with a high-quality dummy load, I read SWR of 1.5. I see some calibration pots in the meter.... any ideas on mucking around with that to tune it for higher frequencies?

Also, anyone know the "procedure" and/or calibration for measuring field strength, RF power, etc? I'm guessing the field strength is pretty much a relative measurement?

Thanks for any help
-Cory

There used to be a shielded 300 ohm TV lead-in that could be run like coax
with no standoffs,etc. Usually 300 ohm is "open-wire" feeder from dipole or
end fed Hertz antenna to a tuner but 450 ohm is much better and tuner
doesn't care and will tune it.

I built the one pictured in the ARRL Handbook. I don't remember the year but I could look it up if you need to know. It was very simple it just took carbon resistors, of an appropriate value and parrelleld them by soldering them between two pieces of circuit board. You can work it out by estimating the wattage of a single resistor then using X number of them to achieve a Y wattage rating. Plug in the numbers to the resistors in parrllel formula and you can find the value of each one. Next is the hard part. Scrounge around the surplus stores until you find a handfull and make up the load. Mine worked well 160-10 although it ran cooler when I cooled it with a small muffin fan and even cooler when I submersed it in some (Silicone) Oil left over from a Xerox Machine. I can't understand why my wife thinks I'm crazy though?

Here's the funny part go check out the Ten Tec I'm selling on ebay at
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1375998243&rd=1
and check the bid history and see how far down that call sign shows up.

I saw his call in this thread and couldn't believe it!

2853. Timewave

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-30 00:15:11 UTC
From: Turner Morgan <tmorgan7955@comcast.net>
Message-ID: <Xns9279CE0935C2Btmorgan7955comcastne@216.148.53.95>
Source record: 39964

Anyone have any experience using the TimeWave audio DSP unit?

Yes, I know, the Clearspeech Speaker can probably do the same thing, but much cheaper. However, the Clearspeech does not have any knobs or buttons or displays. Nor is it software upgradeable.

I'm looking for something to remove noise (atmospheric and man-made) from the home station. It is not really bad, but I could make more contacts without the noise. And also assist in removing the usual QRM. Modes are both CW and 'phone.

Maybe what I'm really looking for is another gadget, but I would like to hear from someone with experience using the TimeWave unit.

Thanks,

Turner - WA4MQY

That switch sets the scan type. I've forgotten what 'F' stands for but 'B' represents 'scan for busy channels' and 'V' means 'scan for vacant channels'. The busy mode is what one would typically expect - the scan stops on busy channels. The vacant mode stops on vacant channels. As soon as a signal appears the scan resumes to find another vacant channel.

Or use a surplus ammo can. Sizes and costs range from about 3x5x10
inches for about $3, to "really, really big" for $lotsa-em.

Good question! I've occasionally wondered that myself. Does it have to be along the lines of "A mudslide is a few miles away and heading this way!"? Or is it only valid to call when your house is actually being sucked into the tornado? I'm pretty sure a broken window doesn't count >:-)

Those foam beer-can-holders (the soft, foam rubber, fold-up kind) make good
cushions and fit snug around most HTs. Just trim off the bottom if needed
and slip the rig in. I suppose you could also pop them into one of those
6-pack-sized cooler bags!

> 73,
>
> Josh, KG6IBF

Pretty much everyone mentioned that you'll have trouble using
wirewound resistors, which is true. Even if you parallel a bunch,
above some frequency it won't help because they have so much
inductance and distributed capacitance that they will be
self-resonant. There are some other tricks you can play however. If
you can get a long piece of RG-58 cheap (like some old lan cable
perhaps), you'll get reasonably close to 50 ohms load no matter what
you put at the other end. The down side is you'll need several
hundred feet of it for that to be effective at 3.5MHz, because the
coax loss is pretty low there. In this case, loss (in the line) is
your friend! Another thing you can do, if you have a tuner, is use
the tuner to tune out the reactance (and the resistance mismatch) of
whatever load you build. In fact, if your load is simply inductive
because of the coiled wire in wirewound resistors, you can tune that
out with a series capacitor. (Alas, there seem to be a lot fewer air
variables kicking about in junque boxes these days...) You're liable
to find that only works at the low end of the HF band because of the
self-resonance effects. I just measured a pair of parallel 100 ohm 5W
wirewounds, and found them to degrade rapidly as a load above 14MHz.
Larger wirewounds would likely be worse. On the other hand, I
measured a 51 ohm metal oxide 2 watt resistor ("very short" leads),
and it would be very servicable as a dummy load even at 440MHz, where
it's 55.87+j17.61 ohms (per a precision RF component analyzer...),
giving an SWR in a 50-ohm system of 1.42:1. At 146MHz, it's
51.43+j5.95, SWR=1.13:1. Interesting thing about metal oxides is that
they seem to be able to stand rather incredible power overloads, and
one could probably make quite a respectable load with twenty or so of
them dropped into some oil. Best to think carefully about how to wire
them up to avoid parasitic inductance and capacitance.

Cheers,
Tom

The only way to stop auctions like this is to report them to Ebay at the begining. They WILL remove VHF/UHF radios that can easily be modified to tx out of band, or that have already been modified.

> simplex on the repeater freqs. (hidden switches etc..?)
> Thanks in advance.

The repeater shift is ON when you go to the Input channel, and OFF when you go to the Output or any simplex channel. Simple as that. I used to have one. It may be confusing if you are used to Japanese rigs rather than Swiss ones (Actually, I don't think there IS any other brand of Swiss ham rig, anyway!), but it stops you from ignoring the RSGB recommendations by preventing you from going simplex on the Input, but lets you go simplex on the Output, which is OK. You only think that you get simplex on the repeater frequencies because if it was Japanese you would go to the Output and then turn on the repeater shift - you need to think in terms of going to the Input when you want to use a repeater on this rig. As a matter of fact it won't receive the Input channels atall, if you think about it, which technically violates BR68 (transmitting on a frequency where you have no receiving equipment!) - but I wouldn't worry about it. Of course, it goes by the old channel numbers, and for an extra little quirk has 40 instead of 0 for R0 (145.0 Input, 145.6 Output), evincing the CB origin of the channel display. The simplex calling channel, which used to be called S20, is conveniently found at 20. Also, if you pull out one of the knobs on the front panel it goes down 1 MHz to cover 144.0-144,975 simplex, but that should be clearly marked, unless it has worn off. Output 45W on high (8 Amps continuous current drain), 15W on low, sensitivity 0.45 microvolts for 12 dB S/N ... that about covers everything! Enjoy.

****Icom IC746 Transceiver for Swap or Sale****

I will swap this fully loaded IC746 complete with all Manuals, workshop Schematics. Also comes fully loaded with Optional 455 kHz filters 250Hz CW razor sharp RX. And Optional SSB 232 9MHz 2.8 kHz Rx & TX Audio filter. Pristine conditions no smoker. Original packaging also supplied. Along with 10 months Guarantee remaining.

I would consider a part exchange or a Kenwood 940 SDX fully loaded and cash settlement.

Or a straight swap for a Yaesu FT847 fully loaded.

Or a straight swap for a Kenwood TS850 SAT fully loaded.

Or a straight swap for a Kenwood 570 DGe fully loaded only, or with cash adjustment.

My sale price for the IC746 non-negotiable is set at £700.

Buyer collects or Courier...

****Garmin GPS 12XP MAPPER****

GPS Garmin 12XP has latest software on-board (Latest software upgrades available on-line from Garmin) 12 SAT channels. Includes Full manual and quick guide chart, soft carry case and External Sat Antenna along with Data and Power Leads. Comes with 9 months guarantee I want £200 no offers please.

Buyer collects or Courier...

****W2IHY 8 BAND AUDIO EQUALIZER & NOISE GATE****

W2IHY for sale, this is a pristine condition EQ & Noise-Gate combined. See what every one in the Amateur world has been shouting about with this audio and noise unit.

This unit is 2 months old; I purchased 2 of them by mistake. Not realizing that you can run 2 Rigs at once with the 1 unit. And have the choice of 3 Microphones plugged in. The cost of this unit along with the shipping and Importation Tax from USA was £378. I will sell this unit for £240 no offers please.

Buyer collects or Courier...

****OPTOELECTRONICS DIGITAL SUPERSCOUT****

OptoElectronics Digital SuperScout. See the latest information about this wonderful snooper.... Covert.... Intelligence RF scanner. It is compatible along with almost all the latest scanning equipment. Just plug and play for hi-speed (Lightning fast) freq. QSYs. Also use it alone for building up a data-base or Freq. list for listening in conjunction with other type Radio RX type equipment or simply use it for Bug Scanning ETC. My Price immaculate condition along with charger and NmIh Battery pack full instruction manual. My asking price Is £200 no offers.

Buyer collects or Courier...

****DANMike Digital DSP Scramblers****

DanMike Digital DSP Scramblers x2. Suitable for all types of TX-RX equipment. Just configure them to your equipment's microphone wiring schematic. These are very secure offering thousands of different sequential combinations for Digital DSP encryption (Have been tested into Dummy Load and configured for IC746 & FT847). Come complete in boxes including manuals and pre-wired for the above radio equipment. My asking price is £150 no offers.

Buyer collects or Courier...

2876. Re: 572B tube orientation question.

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-30 12:24:53 UTC

Message-ID: <puJb9.231968$me6.31707@sccrnsc01>
Source record: 39987

The 572B has different size pins for polarization. This keeps it from being placed into the mating socket incorrectly. The tube can be operated in a vertical position with the base down or in a horizontal position with pins 1 and 4 (the filament pins) in a vertical plane.

Unless someone mounts the mating sockets wrong, there should be no concerns with the physical position.

2877. Heath SB-101

Newsgroup: rec.radio.amateur.equipment
Date: 2002-08-30 12:57:34 UTC
From: shmget@msn.com
Message-ID: <3d6f6a75.64722445@localhost>
Source record: 39988

I have an SB-101 that give me intermittent problems. I will be transmitting CW, and I might adjust for 50 watts output. Next thing I know, the needles on my power meter are wiggling a slight bit, affecting the power output. Sometimes it drops to 30 watts, then might jump up to 100 watts, but big changes in power only happen after the relays open and close (I don't run QSK, so there relays only open after I'm done sending).

Some people have said to clean the relays... Any idea on how to do this? could the driver tube be getting weak/flaky?

I bought this rig in 1995. I have no idea how long that the finals and other tubes have been in there. Every tube with the exception of the finals has a black coating on the top.

Any other ideas on what might be causing this problem. It is getting annoying and many people I talk to keep saying "QSB" but I know its on my end, and not atmospheric. :-)

73's and thanks,

Bob

2878. FS... Low Loss 50-Ohm Cable!

Newsgroup: rec.radio.amateur.equipment

For Sale I have x7 250 Mtr Drums of VR304 7/8ths 50Ohm Vy Low Loss Cable. This cable runs rings round (Andrews Heliax)7/8ths and is some what more flexible. It is used for SHF frequencies on all mobile cellular mast instalations. Comes with a Solid outer shield then x2 Foil outers and then a very heavy Silvered Braid. The centre core is Air Spaced in a poly Air cell dialectric. Losses per 250 Mtr drum @ 13cm are typicaly 3.2dB...

Anyone interested in this type of Cable for the Hobby please mail me. This cabel can be used for all bands including HF when extremely long runs are required. Only serious enquires please. You pay for the transportation of this Cable. 1 Drum weighs approx 75Kg I am asking a moderate £150 for each drum. If you are a 70cm and up man/women and do not want loss this is the cable for you!

For sale: Icom IC-746 transceiver. By original non-smoking owner, in excellent condition - not a scratch on it. The rig has never been mobile, and includes original box, microphone, manual, power cable and 3 filters!: 1.8Kc/9MHz SSB, 350Hz/9MHz CW/RTTY, 250Hz/455KHz CW/RTTY

Price of the rig alone is $850, with the 3 filters add $150, with the Astron RS-25M power supply add another $100. Photos and on-air check available, any band from 40 - 10 meters.

Go to www.eham.net and read the reviews. This has been hashed and re-hashed many times in many places. For my money, I prefer the MKIIG by far. I've had them both. That's just my opinion though and everyone has one. I definitely haven't heard of any problems with the finals on the 100D unless there is a problem in the vhf/uhf section. No problem with HF finals that I know of on the 100D, assuming proper operation. The MKIIG is bullet proof, the 100D has had some minor engineering problems. Each of them are good radios and each has their pro's and con's. Good luck on your choice.

I have a nice Kenwood TS450SAT HF radio for sale.
Included is mic, Manual, Power cord.
This radio has lots of nice features and has a great automatic antenna tuner!!
Radio is in very good condition and from non smoking enviroment.
Price is $495 plus the cost of shipping/insurance to your QTH.
This is my bottom dollar price and a very good deal for a nice radio!! No trades please.

If interested, reply to:
baycity@pacifier.com

Thanks for looking.....

FYI, the MN-2700 has a bandswitch without WARC on it. However, it
will
easily tune the WARC bands with my antennas (130 foot loop and a 130
foot long wire). It is built amazingly well, take a look inside one
some day.

I looked at the 920, but the ARRL test data turned me off. If you are a member, you can download the article and/or the extended test results and analyze for yourself from www.arrl.org. Basically, the transmit IMD responses were pretty bad in comparison to other rigs/manufacturers. A problem in this area can result in unwanted splatter during SSB transmissions. I believe I also saw some similar comments on this message board on that subject. You might search back a month or so.

Check out Paddlette (http://www.paddlette.com. They have one model
which is designed to mount to the K1 tilt stand.

A brand-new paddle which looks quite nice is the Porta-Paddle
(http://www.americanmorse.com).

Schurr makes some nice small paddles, but they are somewhat pricey!
(http://www.mtechnologies.com/schurr/).

HI FROM THE UK
I have made three myself , and as a club we have made at leat 10 of these
beasts and all work very well .

A sryp tin , a so239 socket 2 standoffs and two disks of pcb board.

it is bascally 2 disks of pcb board with 20 (none-inductive) 1K
2w resistors soldered between them , with a thick piece of
cooker cable carrying the rf to the bottom plate , insulated
of course , and then some thick copper wire solderd from the
top plate of a syrp tin to the ground-plane , to reduce the
resistance of the metal standoffs
either filled with sand or oil .

rated at 50watts cont
100watts 4 mins
200 for 2mins all approx

hope the info helps

Please if you have questions or want to make a trade contact me off

list at my e-mail address. gundoc@insightbb.com Some of these

lists are not swap lists and only tolerate my post because it is only

once a week. To the group owners thank you for letting me continue

to post to the group.

Dean

GE Portables

GE MPA VHF Scan 136 - 150.8 split 192 channels nice 9.0

Condition. With battery and antenna. I have this programmed for

Ham and up to 152 MHz before it will not lock on frequency.

$225.00

GE MPA VHF System 146 - 170 Aegis digital encryption. Nice radio

9.0 condition. 160 channel Alphanumeric display. With antenna

and battery. Great ham or public safety radio. $300.00

GE MPD select model 470.- 488 MHz. 48 channel Alpha-Numeric display.

With battery and antenna. 7-7.5 $75.00

GE PCS UHF 440 - 470 8 channel with battery and charger. Looks

Good. $85.00

GE PLS VHF 16 channel. These average an 8 - 8.5 condition. 150 -170

but I have programmed these in the ham band with no trouble. These

have battery, and antenna. $70.00 each

GE MPS VHF 12 channel. 8.5 condition. New antennas and used batteries

Standard charger. $55.00 each have 2.

.

GE Monogram UHF 10 channel portables. 3 radios 2 new batteries and 1

good battery. With 1 dual slot charger. $200.00 all 3 radios.

GE Mobiles

GE Ranger 150 N9HH0A110A 150 - 170 110 watt drawer unit only.

This will work with the control heads and cables I have below.

Just in not tested yet. $75.00

GE MVS UHF 440 -470 2 channel. Works and looks good. $120.00

GE MVS VHF 150. - 170 128 channel. Tested and working. Will work in the ham band. $175.00

GE MCS UHF 440 - 470 4 channel 10 watt mobile separate speaker is also the

Control head. With mic. $85.00

GE MLS Low Band 16 channel scan. 42-50 split. New mic. Should

Program to 6 meter ham. 60 watt $150.00 (sale pending)

GE Mastr II UHF 75 watt with preamp. No Icoms drawer only.

MC65KKG88B $90.00 each only 2 left

GE Mastr II Lowband 42-50 slit 110 watt. MC74KCN33A

With 1 set of Icoms $35.00 each I have many.

GE Mastr Pro Low band 110 watt 42 50 split. MT74TCS33

With 2 sets of Icoms. FREE each. You pay shipping and packing. I have many.

GE Mastr exec II VHF 75-watt mobile complete with accessories. $60.00

each

GE Mastr exec II VHF Mobile extender (repeater like Pac rt) for Mastr

II or Delta. $20.00 each

GE Mastr exec II VHF Mobile extender for GE Ranger (only Exec II that

I have seen marked Ericsson) $65.00

GE S990 head 128 channel scan. Not tested. $60.00

GE S550 head 16 channel looks good but not tested. $35.00

GE S700 head and complete Motorcycle cable set for Delta or Ranger.

16 channel model has short cable and some handle bar mounts. Mic

included but no speaker. Not tested yet.

$50.00

GE Accessories

GE Duplexer Mod DB4075 P/N 19C307166P2. tx453.xxx rx458.xxx

With cables. 4 cavity. $175.00

GE Duplexer Mod P1 P/N 19C307166P1 tx453.xxx rx458.xxx

With cables. 4cavity. $175.00

Mastr II control cable. $8.00 each

Mastr II head for mobile repeater operation. $5.00

Mastr II Mic. $5.00

Mastr II 8 channel tone boards. $5.00

Mastr Exec II VHF receive section. $20.00

Mastr Exec II VHF Exciter. $18.00

Mobile Repeater cable for Mastr II. $10.00

Mobile Repeater cable for Delta or Ranger. $20.00. I have seen

programming cables made from these.

GE white Versatones, 103.5, 162.2, 173.8, 179.9, 186.2, and 203.5.

$4.00 each. I have a large amount of 203.5,186.2, 179.9, 173.8, and

162.2. If you buy 10 = $3.00 each. Buy 15 =$2.50 each. Buy 50 = $1.50

each. These are the only frequencies I have.

GE Mastr II Icoms. EC = $5.00 each, 5C = $10.00 each. Picked up 3 sets of

UHF 2C Icoms $30.00 per set of 1tx and 1rx Icom.

GE Delta cables. These are the downloading type used with the S820

heads. And all other heads $40.00 each

Delta mounting plates. $10.00 each

Ranger mounting plate. $15.00

GE Mastr II mounting plates $15.00 each

Power plugs for S500, S550, C500 etc heads. Good pulls $5.00

GE S-550 / 500 and others mounting brackets. $5.00 each

GE PCS Universal charger. With wall transformer $20.00 each

GE MPI desk charger with wall transformer. $10.00

GE MPI Rack charger, 8 position. 25.00

GE MPI Mobile battery charger, Rare. $20.00

GE Battery discharge analyzer. For MPA, MPD batteries. Attaches to a

rapid rack charger with a DB 15 cable and uses a MPD body to attach a

battery to. Has LED readout in display area of MPD body to tell

discharge rate. Another rare GE goodie. $45.00

GE shoulder strap like new, attaches where belt clip is. $15.00

GE Belt clips. $10.00 each

GE Voter. Has 9 total rec. cards and 2 TX cards. With extender card

and power supply / speaker. $200.00

Other Radios and Accessories

Motorola HT 600 UHF 438 - 470 6 channel. With rapid charger, battery,

And antenna. $120.00

Motorola HT50 VHF 2 channel 150 - 170 belt clip holder battery and

Charger. $75.00

Motorola Radius P200 UHF 438 -469 DTMF front with charger. 6 channel

And has stubby antenna. $135.00

Motorola MT1000 UHF 438 - 469. 16 channel scan. Has battery , charger,

and stubby antenna. $165.00

Motorola Maxtrac VHF 40 watt 16 channel scan. 5 pin. With Mic.

$225.00

Motorola Radius / Maxtrac VHF 25 watt 16 channel scan. 16 pin port.

With mic. $200.00

Motorola Radius / Maxtrac UHF 25 watt. 2 channel 5 pin port. With shure

Mic. $175.00

Uniden SPS 802TS 800 LTR portable. With charger. $75.00 Pair.

EF Johnson Challenger 5852 portables. VHF I think. With charger and batteries but the batteries are dead. Radios make squelch noise when powered up. As is $40.00 pair.

Yaesu FTH 2009 VHF portable. 6 channel. Works great on ham and public

Safety band. With wall charger $85.00

Radio Shack HTX 212 2 meter Mobile. 30 memories, Scan. Works great.

This was in my van before I added another MVS so I know it works.

$95.00

Marconi UHF portable. 16 channel scan with NOS battery. Made by

Midland. $65.00

Midland 70-336B VHF Mobile radio. 8 channel scan. with mic.$65.00

Motorola GP300 VHF 2 channel. on ham band. Has battery OK condition

and charger. $150.00

Motorola Mitrek VHF high 110 watt drawer only. $50.00

Motorola MT500 VHF nice shape. Crystals removed but I have 1 set of

crystals for each radio. Also have a working battery and charger for

each. I have 4 of these. $50.00 all

Voter from IMTS phone system. 2 rec. and 2 TX cards. $40.00

Maxon Rapid Rack charger for 0510/0520 radios. Think they will work

with the sp2000 as well.$35.00

Consignment section

This area is for a few friends who like those other radios you know

"Motorola" They are good people and I will pass along any trades you

may wish to make.

Motorola single rapid chargers for HT600, MT1000, P200. $25.00 each

Motorola HT1000 UHF Intrinsically safe Re-cased looks new. 16

channel scan with charger. $425.00

Motorola Saber II UHF 48 channel scan. With battery and antenna.

9 condition $300.00

EF Johnson Challenger UHF 80 watt trunk mount, 99 channel Alpha-

Numeric head. $225.00

Motorola GP300 UHF 2 channel. Charger and extra battery. $150.00

Motorola Mostar UHF 2 channel and HT 90 2 channel that talk to each other

Mostar has base mic and HT90 has speaker mic and charger. $90.00

Want List not FS

Extra parts for GE suitcase programmers Data modules, Printers, cables,

proms, Anything you have extra. I need some UHF 450 - 470 scan MPD radios.

How many do you have and what do you want for them? Johnson scorpion program
cable.

Terms

All prices are plus shipping from 40201. All items are used unless noted and only have a no DOA warranty if I say it works. If I say not tested your on your own. If I think it may be bad I will not list it. I take cash, Postal Money Orders, Paypal, and checks but I hold them for up to two weeks to clear before I ship. If you have a question E-mail me. Has anyone here been able to get an MFJ TNC-2 to work with the Minicom terminal software on Linux? I have all the settings correct, but when I turn it on all I get is garbled text.

Kurt-

Does it work with some other terminal software? If so, fire it up and see how the baud rate is set between the terminal and the TNC. It sounds like that is where your problem may be.

I haven't used one with minicom in a few years, but it worked fine
then. If you get garbled text, that usually means that one or more
settings is not correct. I would look first at the parity settings.
For some reason the default is 7-E-1, while most terminal programs
default to 8-N-0. Is it a stock eprom?

".....So far every review is 5 out of 5 stars..... and the mod for the extended coverage on it is 100% LEGAL....."

You could have bee playing with CB's & ham rigs for the last thousand years, but you seem to still be unaware that it is ILLEGAL to Modify an Amateur Radio for transmitting on The GMRS/FRS bands, & Just as illegal & subject to the same fines as a CB running a thousand watt linear.
Radio Shack wasn't given the only exemption in History to this rule, & I see nothing on there website stating the FCC type accepted it for dual or triple Radio services. Why do you think that it needs to be "modded" to get this coverage, rather than Transmitting there right out of the box, MR. "You got answers??" Please reference the Owners manual page that mentions the GMRS use you went out of your way to advertize on the 'group.
It's RatShack employeees like you that piss off lots of Real Amateurs that know and abide by the FCC rules, & I'm sure with 9 thousand stores, there will be plenty more Employees that will give the not-worth-it radio 5 star reviews.
If I built you a really (quote), "Kewl" & "Friggin" Bomb proof" non-cable ready 2-head VCR, & charged what current dual deck Hifi stereo DVD/VCR sell for, It wouldn't be worth 5 stars....except perhaps to My Brainwashed employees ..

I've got it set to 8-N-1, which is what the TNC requires according to the
manual.

As far as I know, it's not illegal to simply make the modification, or
to use a radio with this sort of modification to transmit on the
amateur bands (within the limits of your amateur license, power and
spurious-emission limits, etc. of course). Amateur-band radios don't
require certification (formerly "type acceptance").

It is, however, illegal to _use_ a radio so modified to transmit on the
GMRS/FRS bands, since the radio is not certificated for use on those
bands.

So, in that sense, saying "the mod is 100% legal" is literally true,
but is (in my opinion) misleading and deceptive to the point that it's
extremely unethical to make this claim when advertising a product.

Not in my manual. From Chapter 4:

Parity and Word Length

If messages from your TNC appear garbled, with incorrectly
displayed characters, you may need to change the TNC's serial
port parity and word length. (We assume that you have set the
baud rate correctly. See Chapter 2 if the baud rate needs to be
changed.) The most common parity and word length combinations
are 7 bits, even parity (the TNC default), and 7 bits, space
parity. The TNC default will probably be accepted even if your
computer actually uses the latter setting. If your computer
receives 8 bits as data, you may have to set space parity, since
text may otherwise be interpreted as graphics or other special
characters. To set 7 bits, space parity, use the following
combination:

AWLEN 8 (8-bit words)
PARITY 0 (no parity bit)

To return to 7 bits, even parity, set

AWLEN 7 (7-bit words)
PARITY 3 (even parity)

One of these combinations will satisfy most computers. You are
more likely to require a different setting if you have a terminal
rather than a computer, or if you have configured your terminal

port for some special application.

hrm...from to the manual for the 1270C:

If messages from the MFJ-TNC2 appear garbled, with incorrectly displayed
characters, you may need to change the MFJ-TNC2's serial port parity and
word length. We assume that you have set the baud rate correctly. See
Chapter 2 if the baud rate needs to be changed. The MFJ-TNC2's default
value is 8 bits and no parity.

I've tried it with the terminal software that shipped with the TNC as well
as BUXTERM; works with neither.

OK, there were obviously some changes between the 1270B and the 1270C.
The manual I quoted was the TAPR TNC-2 and the 1270B operated
identically. 8-N-0 actually makes more sense for use with modern
computer hardware conventions.

If you have it set to 8-N-0 (8-N-1 does not make sense), I suspect the
problem is elsewhere. I suggest you try the tapr-tnc@lists.tapr.org
mailing list.

I have for sale in very good condition a Yaesu FT-270RH 2 meter mobile rig. This is the high power 45 watt version. It comes with the original box, touch tone microphone MH-15AB, original manual and techical supplement manual. There is no pl tone board and mobile bracket. The display bulb is out and some black bleeding onto the display has started. No problem with reading the frequency. Other than that it works fine and puts out 45 watts. I will ship it for $58 in the 48 states only. I can be reached at (508) 821-2993 or email......WZ1U Steve / Lakeville, Ma.

2929. FS: GAP EAGLE DX Vertical Antenna

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-01 13:04:19 UTC
From: Sidevalve <Sabbatai_zvi@hotmail.com>
Message-ID: <u334nu8b97o3ukji5bmjcshoa8t155qitt@4ax.com>
Source record: 39940
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.swap,rec.radio.swap

FOR SALE:

Gap Eagle DX HF Vertical Antenna - Mounts on 1.25" Pole
Covers 40, 20, 17, 15, 12 and 10 Meters - 21 ft. tall
No tuning to set it up.
All aluminum, Weighs only 11 pounds.
Three 80" Rigid counterpoises (supplied)
Supplied with the instructions.
It has no traps, transformers or matching coils to rob transmitted or
received power.

Manufactured locally by GAP in Florida.

Eagle DX - 6 Band Multiband DX Antenna
The Eagle is the smallest antenna in the GAP product line.
Its development was the result of your requests for a low profile,
high efficiency GAP antenna.

The Eagle DX-VI weighs just 11 pounds and can be installed almost
anywhere - at ground level, on a pole, on your roof or atop a tower.
It is essentially a set of vertical dipoles - the optimum singular
DX antenna. No traps, coils or transformers are used to achieve
multiband operation in this antenna either.
Why is that significanat? Traps are the "weak link in the chain"
of a multiband antenna.
Critical to the design of the GAP Eagle was the requirement to permit
operation anywhere on all of its designed frequencies.
The Eagle provides full coverage with a VSWR less than 2:1 on 40m,
20m, 17m, 15m and 12m, and approximately 500 KHz on 10m
without readjusting. 10m operation is further optimized with a
supplied extender. Compare that performance to any
other low profile vertical. With the Eagle, as with all GAP
antennas, you will not need to buy a tuner.

If a rare DX station appears on 7.050, but, you normally work the
SSB nets around 7.250, just slide the VFO and key the rig!

If the band is wide open, you might work a LU6 with a coat hanger,
but when conditions are less than perfect you want the highest
S meter reading an antenna can provide. Efficiency is critical.
The efficiency of the GAP Eagle is without equal.
It has no traps, transformers or matching coils to rob
transmitted or received power.
For the highest S meter, choose a GAP Eagle.

TUNING - Tuning can be a nasty task particularly if you mounted the
antenna on your roof. In fact, it can become dangerous as trip
after trip to readjust the antenna raises your frustration level and
you lose your "cool". A GAP Eagle , like all GAP antennas,
comes completely electronically pretuned from the factory.
There is absolutely nothing for you to tune.
If you're looking for a reliable, efficient, broad band low profile
antenna that will serve you well and dig out the DX, the
GAP Eagle is for you.

Antenna is in my garage - no disassembly needed!
Clean condition.

New cost $299.00 - will sell for $125.00

Pictures at:

http://www.gapantenna.com/images/eagle.gif
and
http://www.noard.com/eaglepic.gif

Complete Specifications at:

>From: JM na@na.com:....
."diid you ever stop to think that perhaps I am licensed in amateur AND GMRS??.."

Yes, & it doesn't matter, because User Programmable modified Amateur Gear isn't Type Accepted for GMRS, Commercial, FRS, Marine, Police or many other services, weather you are "licensed or Not" for that service. Their "vague" reference in the manual is the same you will get from ALL Amateur manufacturers to "cover their Ass" legally. The olny Exceptions in the USA are MARS/CAP/ Coast Guard Auxillary, for "everyday use" Transmitting in another service. Call your Radio Shack "buyer" in Ft.Worth, & get him to explain that to you, since you obviosly only will belive whatever Ratshack says. The HTX-420 (quote) Ain't "a Kewl, Bombproof" GMRS/FRS radio, even if your licensed in GMRS, & that's a fact.

Thank you to all jenuine enquires. Now the IC746, Yaesu FT707 ES Matching Pwr Supply ES Speaker FP707 and Graphic EQ have all now been sold. The below goods are still for sale.

****Garmin GPS 12XP MAPPER****

GPS Garmin 12XP has latest software on-board (Latest software upgrades available on-line from Garmin) 12 SAT channels. Includes Full manual and quick guide chart, soft carry case and External Sat Antenna along with Data and Power Leads. Comes with 9 months guarantee I want £150 no offers please.

Buyer collects or Courier...

****OPTOELECTRONICS DIGITAL SUPERSCOUT****

OptoElectronics Digital SuperScout. See the latest information about this wonderful snooper.... Covert.... Intelligence RF scanner. It is compatible along with almost all the latest scanning equipment. Just plug and play for hi-speed (Lightning fast) freq. QSYs. Also use it alone for building up a data-base or Freq. list for listening in conjunction with other type Radio RX type equipment or simply use it for Bug Scanning ETC. My Price immaculate condition along with charger and NmIh Battery pack full instruction manual. My asking price Is £200 no offers.

Buyer collects or Courier...

****DANMike Digital DSP Scramblers****

DanMike Digital DSP Scramblers x2. Suitable for all types of TX-RX equipment. Just configure them to your equipment's microphone wiring schematic. These are very secure offering thousands of different sequential combinations for Digital DSP encryption (Have been tested into Dummy Load and configured for IC746 & FT847). Come complete in boxes including manuals and pre-wired for the above radio equipment. My asking price is £100 no offers.

Buyer collects or Courier...

**********CABLE**********CABLE**********

For Sale I have x7 250 Mtr Drums of VR304 7/8ths 50Ohm Vy Low Loss Cable. This cable runs rings round (Andrews Heliax)7/8ths and is some what more

flexible. It is used for SHF frequencies on all mobile cellular mast instalations. Comes with a Solid outer shield then x2 Foil outers and then a very heavy Silvered Braid. The centre core is Air Spaced in a poly Air cell dialectric. Losses per 250 Mtr drum @ 13cm are typicaly 3.2dB...

Anyone interested in this type of Cable for the Hobby please mail me. This cabel can be used for all bands including HF when extremely long runs are required. Only serious enquires please. You pay for the transportation of this Cable. 1 Drum weighs approx 75Kg I am asking a moderate £150 for each drum. If you are a 70cm and up man/women and do not want loss this is the cable for you!

Well -- your inquiry may get a dozen or so biased opinions here -- but for
hundreds of biased opinions see
eHam reviews at URL:
http://www.eham.net/reviews/products/38

Just kiddin (kinda) about the bias. But folks do love their brands. The
reviews at eHam will often show a common thread, e.g., difficult to program,
hard to read in daylight, lousy audio, intermod, etc.

After plowing through the reviews, be sure to visit the Ham store and try
them out.

Don't know how many of us will have enought knowledge or experience with
all four of these to say which is "best".

What is "best" for me is not necessarily "best" for you, or the next guy.

I own a 2100H and am happy with it.

8 = 8 data bits
N = No Parity bit
0 = zero stop bits

I've never heard of a data format with zero (no) stop bits (which may not mean anything). How would the async serial data synchronize itself without a stop bit? I would think 8-N-1 would make more sense (one stop bit) for 8-bit data computer data.

2955. Re: MFJ TNC-2 and Minicom

Source record: 39817

You are correct, the stop bit must be present. The old convention was 2 stop bits at 110 baud and 1 for 300 and up. Obviously 2 stop bits is the same as 1 long stop bit, so except for throughput being reduced will still work on the transmit side.

The two most likely setups are 7-E-1 or 8-N-1.

I am curiuos, what is the FCC type acceptance number? Opening the UHF band for keypad entry is a bit unusual. I thought the FCC banned keypad entry. But maybe not. If the radio is FCC type accepted for Parts 90 and 95, it is up to the user to be licensed appropriately. Looks like a neat radio.

In recent years I have found that the quality level of the Yaesu Radios has
dropped considerably. My recommendation would be the IC2100, or if you can
go to $419 the IC 2800H. it is a very nice radio

I didn't miss it.

Drove over Friday night, spent the night about 20 miles away, got to the boneyard just after 0600 and started setting up in a light mist. Had a stack of old Heath gear for sale. Set up my table, started unloading boxes, and had most of it sold before 0630. Sat around under my umbrella with plastic covering the rest of the stuff until around 0930 when a guy came up and bought the rest of it.

Is this a great place or what? Went there with a stack of boat anchors and junk, came home with a wad of $20.00 bills and a couple of hundreds. Closet is cleaned out, wife is happy.

Someone said it rained all day.

Just picked up the new Icom T90A at the Shelby Hamfest and after charging it up made a few contacts. Got great reports but noticed some significant overheating on the back of the unit just over the battery. Funny, the unit had intermittent overheating while in receive mode too- kinda like it was cycling. Already sent Icom an email and awaiting the "official" response. Thoughts?

If the FCC DID ban keypad entry, then all the Yaesu FT-847's (like mine) are illegal out of the box. :(

first of all I DID NOT WRITE THIS "read the manual" (below)!!
I wrote this:
I'm not a RS fan but this is a nice radio.
I'm not sure on this but doesn't "FCC Type Acceptance" have
something to say about using a radio designed for one service
and using it in another service??

just my .06 cents worth (inflation)

And another thing, I DON'T appreciate the way my original message was
deleted and your comment added. It looks like I wrote that nonsense
below!!!

You just like to argue for the sake of argument I see.
I never said buy this radio for GMRS usage. And I like the way you
added you can use it for FRS, to my statement, which I never said. I
was simply trying to point out a feature that it has available. Seeing
as how I am a volunteer for emergency comms up where I live, this
radio is ideal.
Was just trying to say how impressed I was that RS finally did
something right and made a decent radio that is sturdy, sounds great
and works great! If you dont like, dont buy it. Quite frankly, unless
you have used it, I wouldnt even comment on it.
Now go eat a troll biscuit and sit in the corner.

JM What is the FCC type acceptance number? The FCC database will answer if it is OK for part 95 GMRS use.

I'd go for the 2800 but i"m also getting the Alinco DR-235T/TG. I
want to do 220 MHz also. I only have enough money for 2 radio's but
not a $400 each. I do have to get an antenna also. I'm thinking of
the Diamond Cr302A or something like that. It'll do 2m/1.25m/70cm.
I'm not sure what kind of mount I'm going to get though.

I'm glad that RS is moving away from the "micro HT". RS is more of the store for "first rigs" then for experienced hams. A micro power HT is just not the right thing to get for a new ham. The last great RS HT (in my book) was the HTX-202. What made it so good is that it was almost completely immune to intermod because it had no extended receive. The only thing wrong with it is that it was a brick and single band.

Still, a quick look over of the HTX-420 doesn't make me want to give up my TH-F6A that I got for $300 at dayton.

> Someone said it rained all day.

And they were right!
We got there Friday morning about 10:30 and it was already
rocking.
Ralph W4ZO and I spent most of the day walking around looking
for goodies while he wife Jen watched our stuff in the tent.
Made my best sales Firday.
Went home Friday afternoon and got back about 06:05 Saturday AM.
It's only about 1 1/2 hours from Wesley Chapel to Shelby.
Mostly misty in the early morning, then about 10:30 it started
really raining. I sold my Heath SB-110A station about 11:30
and decided to pack up.
It rained all the way home, we had almost 3 inches in the
rain gauge at the house.

Does anyone know who it was that was set up in the over flow
flea market area just outside the back gate, that was selling
a bunch of military gear? He had several PRC-6's that I was
interested in, but the guy that was watching the stuff didn't
know how much anything priced for.
I checked back several time and he was still there without the
owner. Must not have wanted to sell it very bad... huh?

I've been going to Shelby since 1970 and this was my frist
Friday. I will be there on Friday every year from now on.

73,

Ron KC4YOY

andy its a simple jumper that you pick up at radio shack plugs into the external speaker jack of the radio and either the line in or mic jack of the sound card this jumper will have a 3.5mm 3 conductor plug on each end

unless your talking about the cable that allows you to control the radio via the computer then you need to check out www,hosenose.com they sell those level converters for like $50 for most rigs

The HTX-420 is getting good reviews and seems to perform well. However, it takes 12volts to get 5 watts of power? That's so 5 years ago. In my opinion they should have used an updated mosfet power module instead of the old style PA modules that suck the life out of the battery in no-time. Hmm...maybe that's why the stock battery is a 7.2v 1200ma Li-Ion pack? It was a good try RS, but not good enough.

Dan

2984. FS: Zenith hi-pass filter for TVs

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-02 14:01:18 UTC
From: Sidevalve <Sabbatai_zvi@hotmail.com>
Message-ID: <8pr6nugs9ofbqffg5fijj63s6kjlai8ppv@4ax.com>
Source record: 39845

FOR SALE
QTY 1 - Zenith hi-pass filter for TV set 75 ohm antenna lead-in.
This unit is in a shielded metal case with F type connectors for
input (fem) and output (male) to the TV set.
Will help to reduce that nasty herringbone modulation and
overload from your 375 watt AM rig when the XYL is
watching TV in the next room!

Available for $5.00 plus $2.00 postage.

2985. FS - CRYSTAL SOCKETS

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-02 14:02:30 UTC

FOR SALE:
Crystal sockets for HC-6/U crystals.
If anyone would like some, I have about 10 or 20 of these
available for $2.00 each plus shipping
These are new parts. They are teflon and anodized metal.
They have two hole side mounting, with a clip that nicely
holds the crystal in place.

Great for repairing older rigs, or for homebrewing tube transmitters
& receivers.
This is NOT the same as FT243.
These are for the similar sized crystals that have thinner pins.

E-mail me if you would like some.

FS: Kenwood TM741A - 220, 440 & 2m

I just sent the radio in to Kenwood , (4/9/02) to get checked
out and had a new battery put in it. cost was $200.00, I have the
receipt. I have the mike, bracket, and most of all the manual;
without the manual you can not operate this thing. I do not have
the box it came in.

$450.00

If you check out this TS940 for sale
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1376207995 you will see he mentions someone who refused to pay on his last listing. That someone was me. Yes I am guilty. I refused to pay because I had won the bid before he e-mailed me the serial number as I had requested. Being one of the earlier runs, I decided I would rather not buy a radio known to have early production problems. Now he has listed the item again, yet the "little" receive problem he talks about was not mentioned in his original listing. Did this problem just appear or did it just slip his mind. Either way I am glad I renegged on the deal, or I would have inherited this "little" problem. I have been taken before and I wasn't going to throw my money away this time. I just completed a deal on a mint TS850S from Jeff, KC1MK which I bought sight unseen and he my 2m all-mode base the same way. I think we both got what we wanted. So tall all those wondering who the guilty one is, the one that shouldn't even be allowed on eBay??? it was me.

73,

de VE3TMT

Source record: 39867

I recently traded a Kenwood TS-850S to Max, VE3TMT, for a Kenwood TS-711A and some cash, and the deal went very smoothly and I am quite pleased with the deal and with the TS-711A. I wouldn't hesitate to deal with Max again on the future, either here or on e-Bay.

Given the circumstances and the previously unmentioned receive problem, I think the seller of the TS-940S is the one I would be leery of dealing with.

73,
Jeff, KC1MK

You are making the assumption that when I chose the Icom 2100 that I considered your other choices .. I didn't. When I bought it I already owned three or four other radios capable of 2 meter operation. I based my purchase on price, size and brand name with features running a distant fourth.

Suggestion: Go to www.eham.net and check out the reviews for all your possible choices. See what folks who actually own the radios think about them.

Why not do what the rest of us have done. Just pick one and live with your
decision. If you like it, great. If not you sell it and take the loss.
Like the rest of us. Personally I 'd go with the '2600.

I'd be curious to see what it does on a alkaline pack. The TH-F6A
will only do 0.5W. So if it's battery runs down you need external
power for full power.

I forget what the HTX-420's power is, but it's less then 3 dB down
from 5W. If it still has full power on alkaline and good battery
life, that might be an acceptable trade-off.

But the biggest factor to me is how good the intermod rejection is. I
live in intermod hell and basic function is far more important then
bells and whistles.

1 cubic meter of concrete should do the job. About 5Kg of re-enforcing steel embedded, should keep it from cracking. Embeded anchor bolts or a plate should do the trick.

Source record: 39881

A couple things to look into.

1. Is the tower self supported or guyed?
2. Will the tower be attached to a fixture such as your house?
3. What is the wind loading factor of the tower *and* the antenna?
4. Do you live in a windy area?

A cubic yard is a good starting point but the above factors will certainly alter that value.

Best to check with your local building inspector --- kind of drag to have to redo the base once the concrete is hard!

You will more than likely need a building permit (depending on where you live).

de Bernie, VE3FWF, Ottawa, Canada.

The idea is for me to see what you have to say. Of course I could just pick one. Actually I already have picked one but wanted the reason why you wanted the one you picked. Its just a simple little question. You can answer or not. Simple

Thanks for the response.

I'm actually going witht the IC-V8000 for other reasons than the ones
you've all given me. I like the power, the wether channels, it can be
programmed also, and also it dosen't get hot even with a lot of use.
I'm not wild about burning my fingers on the case when its being used.

I'm finding that out with my handheld.

What is the FCC ID number? If the FCC really did type accept this
for both amateur and GMRS usage, it would be great, as well as the
FIRST radio to be so certified. I'm very interested.

(Please don't tell me that you're illegally using a modified radio.)

==========

Hi,

I bought a Yaesu 1500 about a year ago. I have not owned a Yaesu radio
in over 10 years--always had Kenwoods. I bought it because it had the features
that I was looking for--not for the name. I wanted a radio with a data port on
it so I wouldn't have to make up some wacko cable for operating packet for the
DX clusters. I had that with my older 2 meter radios. Along with the data port I
got 50 Watt capability, 130 memories, PL, and small size (4x4x1). What else
could you ask for ??? And---it was cheap---$139.99 shipped to my door !!!

What's the problem with FS messaages here? At
>least it is almost always ham gear.

Hi Carl,

The problem is that things have changed in the past several years and right now the structure of the rec.radio.amateur newsgroups does not reflect the needs of the users. Obviously there is a huge demand for a place to post FS, FA, and WTB ads. rec.radio.swap is overrun with CB ads (as I am told) and so hams have migrated to the equipment, and the boatanchor newsgroups. However please note what the charter says:

"The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is NOT the place for buying or selling equipment; that's what rec.radio.swap is for. "

IF, and this is a big IF, there were one or more newsgroups formed for the express purpose of placing FS, FA, WTB ads do you think it would benefit both those folks doing the buying and selling as well as the "original types" (like me) who come to this newsgroup looking for technical discussions on equipment?

For example to show you what I mean, say there was a new HIARCHY (sp?) of newsgroups within rec.radio.amatuer called
"rec.radio.amateur.trading"......
under that hiarchy there could be -
rec.radio.amateur.trading.ebay
rec.radio.amateur.trading.forsale
rec.radio.amateur.trading.forauction
rec.radio.amateur.trading.wtb
rec.radio.amateur.trading.boatanchors
rec.radio.amateur.trading.anything_you_want_to_make_for_a_newsgroup_I_don't_care

Then.... and here is the fun part..... anyone who comes back to good old r.r.a.equipment and posts a FA: ad gets wouff honged !!!!!!

I spearheaded the efforts to originate the boatanchors newsgroup 5-6 years ago, so I used to know the procedure for officially forming new big eight newsgroups (of which "rec" is one). I could look into it if there is enough interest. The one thing I learned back then was that debates on the subject can go on forever and get bloody. IF I was to do this, I would take comments for a limited period of time and then I make the decision on how we procede. On the other hand, if there any

volunteers who want the job you got it.

My email adr is ok.

Rick K2XT

I agree...a new group for the selling of amateur gear only would be
great. Somehow we would have to filter out all of the CB junk and
scanners. FA mesages annoy me because most of the time the gear is
already sold. If you want to make a killing on ham gear, EBAY is the
place to go....bidders pay far more than HRO charges!! However, a
good group like the old Ham Radio Yellow Sheets would be nice.

You can make it more usable by placing rules such as ignoring anything
starting with "FS:" and "FA:" in the subject line.

I don't know about other users, but the group mentioned above is never
available to some users. I have had three different ISPs over the last
couple of years amd r.r.s is always available but the group above is never
listed. Is it available to certain locations only?

Dan

Heathkit HW-8 with original manual and power cord, looks good and works excellent 1.3 to 1.7 watts output covers 80-40-20-15 meters. Recently bought this from a fellow qrp'er but have subsequently bought a K2 and now have desire to build (or buy) a K1 so this must go. It has some marks on the case, not bad, front panel is almost perfect. All original, no mods that I know of . $125 shipped in the lower 48.

Datong FL-3 audio filter. One of the best non-dsp filters made. Has auto-notch, HP/LP/manual notch/peak, exc condition both physically and electrically with power cord and manual. $95 shipped in the lower 48

OHR SCAF Filter looks and works excellent with paperwork (later model with the bypass built in) $65 shipped in the lower 48

MFJ SBF-2 SSB Filter 4 positions: hi-pass, 2.5, 2.0, and 1.5 khz , on/off/bypass input/output connections and phone jack. Utilizes internal 9v battery. In very nice condition and works fine. $17 shipped in the lower 48

Astatic amplified D-104 with the T-UP9 stand (has push to talk bar on the base as well as on the side of the mic. very nice condition, currently wired with a 1/4" phone plug for a Ten Tec. $40 shipped in the lower 48

Please email with any questions..
thanks

Just a word of advice; the digital display parts are getting rather hard
to find if the FT301D display unit goes bad. I'd recommend getting the
Analog display unit only, if you have a choice.

Matt, if the tower manufacturer cannot come up with the specific information, you should get a licensed engineer to help you out. Mistakes in tower base design and construction can be fatal.

Followup: I had another e-mail go-round with the person from
Yaesu, and it is clear that it had been his decision to make his
threat, and that he had only been instructed to respond to me.
He expressed regret for taking that path, and wisely called a truce.
I respect him for that, I am sure that it wasn't easy after bold words.

I don't feel that one person's mis-step reflects poorly upon Yaesu,
and will continue to buy their equipment and recommend them to
others as I have done in the past. I really do hope that the product
quality of their new offerings measures up with that of years ago.
Their FT-8900 and their VX-7R sure look great on paper.

> File away this URL http://www.chillingeffects.org

All very interesting stuff. Yes, we are all free to express our
opinions, so long as we identify them as such. The same goes
for hearsay. Never accept anybody's threat of legal action
against your own opinions or hearsay. To let such threats go
unanswered only gives them the victory that they have sought.

Also, if you will need a building permit to errect it, then you are "SOL" if you cannot provide the engineering data and drawings to the city in order to obtain the permit. And even if a permit is not required, it is still a smart idea to obtain one anyway. A permitted, inspected tower greatly reduces your liability in the even of an accident compared to just putting it up and hoping for the best.

The new Icom IC-V8000 has done away with the endless menus and multitudes of tiny buttons that make these radios so friggin' hard to operate. It was reviewed in the July 2002 QST, and that review is also at the members-only part of the arrl.org web site. There might also be a few reviews at the eham.net site, but the radio is pretty new.

Good luck...

Bob

If you want to go ridiculously simple, try the FT23R. It's got tone
generator, DTMF option, and 10 memories.

Load on the tower base will vary greatly depending on whether it's self supported or guyed, what the angles and sizes of the tower legs are, etc. The best thing you could probably do is ask the manufacturer or a licensed engineer for directions on what size base to use. If the manufacturer says he has no idea, I'd switch manufacturers...

M.E. wrote:

> 1 cubic meter of concrete should do the job. About 5Kg of re-enforcing steel
> embedded, should keep it from cracking.

I don't see why the reinforcing steel... a block that size (1x1x1m)
shouldn't require rebar since it's not tall enough to flex significantly
and probably has a large enough cross section for the expected shear
forces. If you experience significant cracking the problem might lie in
either the concrete mix or a cold joint in the block. That last one's
extremely important... I've seen several hams mix up a batch of
concrete, pour, then go to lunch and come back 2 hours later and finish
pouring. Makes for some nasty cold joints later on. Pour the block all
at once or not at all!

> Embeded anchor bolts or a plate should do the trick.

Anchor bolts? I'd be careful if the tower was self supporting, the bolts
could very well get pulled out during high winds. I'd use something
along the line of embedded steel: rebar or a plate or similar.

With all the recent postings about the big three's lackluster service, I thought I would share a good experience I just had with Icom's parts department. I had to order a replacement speaker for an HT and a volume control for an older dual bander. The woman I spoke to, Lorie Phillips, was extremely helpfull, friendly, and a pleasure to deal with. The volume control was not listed on their active parts inventory, so she researched it for me and came up with a suitable replacement. Service above and beyond the call of duty, especially in this day and age of impersonal service.

Thanks Lorie!

The reason is that the rec.ham-radio hiarchy is not legitimate. The
correct name is rec.radio.amateur.
When there are illegitimate news hiarchies most sites do not carry
them on their servers meaning the articles do not propagate well.
I know because I used to do this for a living.

Rick

>Dan

Dan,
Congratulations. You have a well administered news server. As I
posted previously rec.ham-radio is not legitimate and your news
administrator has his/her site set up to ignore it,.as they should.

FYI - what I mean by not legitimate is that it was created by someone,
and they sent out a "newsgroup creation" command. But since it was in
one of the big eight hiarchies (rec, sci, comp, news, etc.) the
command was ignored because it was bogus. New newsgroups in the big
eight have to be created by a formal process. The process involves
forming a charter, publishing it, voting. If it is approved then a
legitmate creation command is sent out and the newsgroup is added to
all sites at the same time. Because of this ALL news servers should
be identical as far as the newsgroups they contain in the big eight.
On the other hand the "alt" hiarchy is completely chaotic, unmanaged,
and as a result you find 20,000-50,000 mostly bogus, prank newsgroups
there. Such newsgroups are either empty or filled with porn web site
ads.

Rick

Sorry to post this reply to the net; I have very little luck emailing direct to the hotmail.com domain.

Your english is a lot better than my spanish.

Unfortunately, the factory service manual on the IC-2100 is $45, an appreciable portion of the radio's entire cost. I have a Nth generation schematic, very poor copy that ICOM charged me $5 for plus another $4 shipping/handling. :(

Check transistors Q17 2SC4116BL NPN, Q18 2SC4081S NPN and Q19 2SB934P PNP. These control Vcc2 power module pin. The base of Q17 is controlled by a multipin IC whose number and pinout is unreadable on my schematic. Q18's base drive is also controlled by an op amp, IC3 TA75S01F. The noninverting input is tied to a thermistor, probably shutdown protection for the amp module. The inverting pin is connected to some sort of RF/detect sampling from the power module's output...looks similar to a Breune directional coupler/VSWR protect circuit. Hope this makes sense; describing a schematic is difficult at best.

If the variable power isn't important to you, I'd connect a voltage divider between 13.8 Vcc and ground with the tap going to the power control pin. The voltage divider resistor ratio will determine the power output. I have no idea what the effect of leaving the power module on all the time would be - if class C, probably nothing (no drive, no output).

Hope this helps somewhat.

FOR SALE:

British WW2 straight key - now reduced to $25.00

Shure 202 hand microphone
Gray, sharp appearance with RED PTT, excellent condition.
Great for use with any station - looks excellent.
Reduced to $25.00

Icom hand microphone, low impedance, black.
Picture available on request.
Not the 'HM-36' or any other mic for your late
model rig. Just a good mobile mic - probably went with an
IC-21 or IC-202 is my guess. No model number on it.
Will sell for $15.00

James Millen Company Grid Dip Meter with manual.
Model 90651 GDO mint in the original Millen carry case.
Best looking one you will find anywhere.
Available for $125.00

Omega - T antenna impedance noise bridge with instructions
This unit will analyze your antenna impedances and give lot of useful
information. Finds resonant point and impedance at various
frequencies. Now reduced from $50.00 to only $15.00

Meters:

RMCA 0 - 8 Amps RF. Black case that is 3" diameter. Meter looks new.
QTY 1 only at $10.00

0 - 10 mA - marked "Plate Milliamperes."
Sterling Manufacturing Co. 2" diameter with chrome finish.
QTY 1 for $6.00

Phasetron 0 - 300 A DC, new meter in box.
Needs shunt. Has black case and is 3" in diameter.
Very nice looking.
Qty 1 available for $8.00

Without looking at the auction and just going from what I understand from your original post, you should not have bid before you got a reply to the serial number concern, if that was important in your decision. The rule is, if you bid and win, you should honor the auction. Next time, do your homework before you bid and everyone will be more satisfied.

Browsing through the ARRL _Hints & Kinks_ (15th ed.), I found a report of somebody who experienced strong QRM all over the HF bands that he eventually traced to a neighbor's computer-controlled treadmill!

They solved the problem by agreeing on times when the treadmill would not be used, but shouldn't the manufacturer of the treadmill have been made to fix (redesign if necessary) this unauthorized transmitter?

Service above and beyond the call of duty,
> especially in this day and age of impersonal service.
> Scott
> KA1MRO

My Icom 745 drifted all over the place and would not stay on frequency. A check on their website said to replace a variable cap in the 2nd LO stage. I called Icom and they quoted the price of the part as 97 cents. She said that was too low to worry about so she sent me 2 for free. I replaced the part and the transceiver is stable as new.

I have no problems with Icom service.

Hi dear friend Don.

TNX for your replay and informatios.

The IC-2100H is runnig OK in this moment.

The problem was the 2SB934 PNP transistor open heated. I replace this with a similar
7Amp 80V PNP transistor and all OK for the moment.

TNX again for all dear Don.

73's and DX

Antonio - EA7HJ

3096. ATTN: WASHDC METROPOLITAN AREA HAMS - EQUIP FS

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-05 17:56:33 UTC
From: Murray Green <mgreen@erols.com>
Message-ID: <3D779AD1.1269C0E@erols.com>
Source record: 39707

Unfortunately, there is no way to segregate local area selling on
this newsgroup and the items are so few in number and so low in price
that it is not reasonable to consider shipping. I hope you will
understand.

The following items are for pickup in the WashDC metropolitan area and
all proceeds will go to one of our local radio clubs. They have not
been checked out but seem to have little use albeit oldies:

* RCA DUAL TRACER (Model WM-541A) Converts single traced
oscilloscopes to dual trace, w/manual. Black front face, gray box
Mint. $10.

* BELL AND HOWELL DIGITAL MULTIMETER: (Model 9550) w/manual Mint $10.

* 2 POSITION DATA SWITCH BOX. Looks new. Quantity 2: $3ea or both
for $5.

* HEATHKIT SOLID STATE DIP METER with plug in coils and manual.
Includes
metal gray carrying case. w/ manual Very clean. Some nostalgia here.
$20 OBO.

* SNAP ON FIBER OPTIC LINK, New in Box. $3.

* SINGLE RIGHT EAR HEADSET WITH MIKE: $3

Improved Linux PSK31 freeware available: Improved PSK31 freeware for Linux now is available for public use and testing. KPSK is a PSK31 application for the KDE 3.x Linux desktop environment. While many different PSK31 applications are available for Microsoft Windows, very few are available for Linux. First released as version 0.7 in September 2000, a new and greatly improved version (v 1.0rc1) now is available. Its features include the ability to simultaneously transcribe four separate signals; frequency-scaleable waterfall; improved IMD measurement that provides IMD data only when the measurement is valid; user-selectable waterfall colors; full user documentation and troubleshooting information; 12 macro functions (tied to function keys); a built-in logbook; a simple and attractive user interface; and AutoCQ and Auto Call Check functions. Detailed information, screenshots and the software package are available free of charge via the Internet.--submitted by Ernest Stracener, KG9NI

Hello,

These valves are completely new, never used. They are in original
boxes and in mint shape. The valves are mostly HALTRON brand, but
they were a typical 'rebranding' company and got their valves from
well known manufacturers like Philips, Mullard, Siemens etc.

The following are for sale. The price shown are for each valve, and
as you can see, they are very low.

950 pcs DY 87 $ 0,40 HV single rectifier

60 pcs EB 91 $ 0,50 = 6AL5
40 pcs EF 50 $ 0,40 WW2 wideband pentode
20 pcs EF 55 $ 0,50 WW2 wideband radar pentode
200 pcs EF 183 $ 0,50 = 6EH7 remote cutoff pentode
40 pcs EY 81 $ 0,40 Single diode 550V 150mA
40 pcs EY 86 $ 0,40 HV single rectifier

220 pcs PABC 80 $ 0,50 triple diode + medium u triode
400 pcs PC 900 $ 3,00 high gm VHF triode + audio
90 pcs PCC 85 $ 0.40 double triode VHF
280 pcs PCF 200 $ 0,50 triode + high gm pentode
350 pcs PCF 201 $ 0,50 Triode + high gm pentode
630 pcs PCF 801 $ 0,50 Triode + high gm pentode
370 pcs PCF 802 $ 0,60 Triodepentode
730 pcs PCH 200 $ 0,50 Triodeheptode

150 pcs PCL 81 $ 0,60 Triode outputpentode
190 pcs PCL 82 $ 0,50 Triode outputpentode Wa 7W
200 pcs PCL 86 $ 0,60 Triode outputpentode Wa 9W
250 pcs PFL 200 $ 0,50 Pentode + high gm output pentode
(S= 22mA/V Wa 5W)

170 pcs PL 82 $ 0,50 Output pentode Wa 9W
170 pcs PL 83 $ 0,50 Output pentode Wa 9W
360 pcs PL 84 $ 0,50 Output pentode close to EL 86
200 pcs PY 81 $ 0,40 Single rectifier 550V 150mA
100 pcs PY 83 $ 0,40 Single rectifier 175mA

Even more discount is available if you buy large quantities.

Yaesu FT-100 w/ TCXO, 6khz AM filter, CAT and Packet cables

This is a great rig that I have been very happy with. My main use has been 6M, 2M and 70CM SSB/FM and shortwave listening. It has also been used 160M - 10M by other HAMs during field day. I have never had a problem with it, the built in DSP filters are great for pulling in the weak DX stations. After purchase I added the TCXO and the 6khz AM filter, it also comes with a packet interface cable, computer interface cable and the original XO module. I really like the FT-100 and have enjoyed hundreds 6M SSB contacts, the *only* reason I am parting with it is a 3000 mile move. I will not have the space or time for much more than using my HT.

Receive: 100 kHz - 961 MHz (Cellular blocked)
Transmit: 160 - 6 Meters 100watts, 2 Meters 50watts, 70 Centimeters 20watts
Emission Modes: A1 (CW), A3 (AM), A3J (LSB/USB), F1 (9600 bps Packet), F2 (1200 bps Packet), F3 (FM)

This item is listed with Ebay at

Good question. I investigate interference problems for the power company I work for. About a year ago, I had an elderly woman report a problem with AM broadcast band interference. I traced it to a computer-controlled treadmill in a therapy center across the road from her. I could pick that treadmill up on my equipment at least a quarter mile from her house. She was going to contact the FCC as the center claimed they had patients to treat and didn't believe me that their equipment was causing a problem. Even after they turned the machine on and off several times while listening to the interference start and stop on my radio. I didn't have the heart to tell the woman who called us that she would have more luck trying to contact UFOs vs the FCC.

I have a 2100, it's a nice rig, especially the controlling mic. One thing I dislike about recent lines of VHF radios is the excessive simplicity where you have to surf 3 levels of one-liner menus to find the option you like. Icom did a pretty good job of fixing that IMO in the 2100 by adding a multifunction keypad in the mic.

Wish they had included the alpha display toggle in the mic tho. Pressing the A/N button for 2 seconds while reprogramming memories gets on your nerves after a while :/

I have a Heathkit 2 Meter Transciever and Power Supply listed at auction.

This rig was assembled over 25 years ago and packed away in a box. I completed the rig and never took the test for my license.

This would make a great little addition to a shack!

I'm glad there is a KDE version ;-) and I'm in no way running a fast
computer (233Mhz) and it runs just fine. Viva La Difference!

Oh and you dont have to be running KDE to run a KDE program, KDE programs
work fine when your using a light weight window manager like blackbox, ice,
fluxbox etc... there is just a slight delay starting the program then
things run OK.

Trying to locate an old Radio Shack project book from the late 1960's. It had a variety of transistorized projects in it, including a one transistor oscillator ham transmitter for 40 meters. It was a qrp project. If you have this book, I'd love to get a copy of the front cover and the one or two pages that had the construction project on it. Thanks. Jim W7LS

None of them cross reference, but I'm not even sure if he is a ham. I am assuming he is because of the fact he was selling radio filters. But if memory serves me correct, he sold a wide variety of items. Unfortunately I don't think you can search back past 30 days on eBay. I thought I made the purchase in early August, but it must have been longer since the 30 day search turns up nothing.

((plaintive whimper))

It'd be really nice if people who release KDE-based (or GNOME-based)
software to a wider community, would be willing to make available a
version of the application which has been statically linked against a
suitable set of KDE/GNOME non-shared libraries. This would give those
of us who don't use KDE/GNOME the ability to at least test out the
application.

I've occasionally looked at downloading and building GNOME- or
KDE-based apps, but the set of development includes and libraries
required to configure and compile them is usually rather overwhelming.
It wouldn't be a problem for my workstation, but my laptop's hard
drive is a bit cramped for space at the moment, and I'm reluctant to
install tens of megabytes (or more!) of interlinked libraries just to
be able to build a small program.

My dad smoked 3-4 packs a day. His opthamologist told him he could use new glasses but not to bother cuz he'd have a stroke within 6 months unless he quit. "Quack!" said dad, "Been smoking 40+ years and ..." but the quack was right. The stroke didn't kill him but cronic CO poisoning nearly did. Took a month in the hospital to scrub the poisoned red cells out of his blood then get the pressure down before it killed his kidneys. Couldn't get out of bed at first but he made us proud trying. Made it to the bathroom, then the kitchen, then outside. Every day he walked farther and farther ... until after a whole year he made it all the way to the 7-11 and bought two cartons of Camels!! That's what addiction does to people.

That was my first "real" communications receiver back in the mid to late '50s in UK. I seem to recall replacing the first RF Amp tube by something newer and quieter. IIRC, the weight was more like 85 lbs., so it won't be cheap to ship.

And (again IIRC) it didn't include a power supply but needed 12.6v and 250-300 VDC.

NO!!! You are incorrect!
It weighs between 50-60lbs as advertised I've weighed it.
I say 50-60 to give room for packing material weight.
Shipping cost to? Not necessarily expensive to most locations.
Shipping based on CDN dollars so it's a very good deal from here.
This has a built in power supply so no external power supply needed.

I hope this clears up the FACTS for you.

3142. FS: Drake Staion & Synthesizer

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-06 22:44:23 UTC
From: "Robert S. Stein" <w6nbi@earthlink.net>
Message-ID: <3D792FC7.2010302@earthlink.net>
Source record: 39553

Drake R-4 Receiver, T-4X Transmitter, MS-4 Power Supply/Speaker with original manuals. The R-4 comes with several extra crystals, which are really not needed if used with the the frequency synthesizer. $350.00.

Frequency synthesizer for the above, which I designed, built and published in the August 1972 issue of "ham radio" magazine. I will supply an original issue of the magazine (cover slightly torn), as well as schematics of all the circuits which improved performance but were never published. This synthesizer provides complete coverage from 500 kHz to 30 MHz, thus including the WARC bands. $275.00.

If necessary, I will sell the synthesizer separately, but if a buyer takes all, I will reduce the total price to $600.00.

Buyer pays shipping. However, I prefer a pickup in the San Francisco Bay Area or will arrange to meet at a reasonable location.

Bob, W6NBI

If you still have the ebay paperwork (I always print the item sheet for records) including the item number you might be able to email eBay support (their email address is support@ebay.com) personnel and they could locate the info for you. Or try a search with you as the buyer id and see if it does pull up beyond 30days?

<trying not to sound like the stereotype Linux geek, but I don't think it
will work ;-)>

Well you could always do it yourself. For example, install qt2 on your
workstation, then staticly compile linpsk (http://linpsk.sourceforge.net)
package it, and install it on your laptop. Don't forget to share your work
so others in your situation may benefit.

BTW have you looked at lpsk31
(http://leonardo.spidernet.net/Copernicus/22420/)? It's a ncurses/console
psk program that might be right up your alley.

3150. FS: HP-1715A oscilloscope with manual, for PARTS

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-07 02:32:35 UTC
From: lagagnon@fakesprint.ca
Message-ID: <3d7964ef.981049@news.sprint.ca>
Source record: 39561
Cross-posted to: sci.electronics.equipment,rec.radio.swap,rec.radio.amateur.equipment

I have one Hewlett Packard HP 1715A 200 MHz oscilloscope complete with a manual. The scope is non-working and would suit someone requiring parts for this lovely scope. The only problem appears to be with the vertical amp board and also one of the FET preamp transistors is blown on the Channel A attenuator preamp. The front panel knobs have all been scavenged. The power supply, and tube are perfectly intact and working.

The parts in this scope tend to be common to the entire HP 1715-1745 range scopes. I want only $30 USD for the scope and manual plus you pay shipping. The scope packaged would weigh about 15 kgs (33 pounds), and ground shipping from Canada to the USA would vary from between $25-$39 USD.

Email me direct if you are interested.

To All,

I know that there are sometimes "common" problems with some radios. Has anyone had an FT270R get stuck in transmit mode. There is no microphone on the rig. Could not find anything obvious.

Second question. Anyone have a schematic for this radio? Please contact by e-mail if so.

My thanks in advance.

I would check VOX circuits and CW keying circuits. Vox samples audio and switches to TX at a set threshold. Since no microphone is on the radio, I would look for emitter/collector short on the switching transistor and also any noise that may be showing up on the audio circuits into the vox.

Steve

From: rcuffee@hotmail.com
Message-ID: <df27559b.0209070953.45a005b4@posting.google.com>
Source record: 39568

I am thinking about buying an ALS-600, and I would like some input on the performance of this amp.

Is there any problem with the T/R relay?

Will the amp run off 120v without dimming the lights in your shack?

Is the amp or the power supply noisy?

Thanks,

RC

Yeah, I've thought of that. I was just hoping to save a bit of
trouble.

A lot of people do put up binary distributions of their programs, but
they're usually built for dynamic linking against a specific
distribution (most commonly Red Hat) and aren't very portable.

>BTW have you looked at lpsk31
>(http://leonardo.spidernet.net/Copernicus/22420/)? It's a ncurses/console

Haven't looked that that one yet. I did built twpsk 1.1, and have
used it successfully for a number of contacts (furthest so far is a
10M QSO with an amateur in Patagonia).

I'll check out lpsk31 and see how that compares - thanks for the
pointer!

3176. 2M rigs with SMPS

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-07 23:10:11 UTC
From: Chetan Bhargava <no-spam@spamcop.net>
Message-ID: <ale0rq$mj8$1@news.mainstreet.net>
Source record: 39587

Hi All,

Does anyone use a PC power supply for their 2M mobile rig? Does anyone has any ideas of using it with a PC power supply?

TIA

Chetan

Motorola Business Repeater (from label:)

Model C74MSY-3101AY

Trans. Type CC4061C

Serno. MA760W

453.875/458.875 Mhz

Unknown power output, i think its 40W or 60W, but the unit definitely works.
Activating the exciter test switch triggers a frequency counter placed near.

Also includes Sinclair Radio Laboraties R-302G Duplexer.

Sold As-Is. I am asking $200 for this unit with duplexer.

you can view pictures of both items at
http://www.saviormoney.com/repeater.html

Email saviormoney at saviormoney@saviormoney.com if you are interested in
this item.

thank you.

It is an EXCELLENT unit... if you have noise in the area you shouldn't be
without one. It works best with local single-source noises... also
significantly cancels distant interference from undesired stations.

3196. Yaesu HT power option

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-08 21:58:51 UTC
From: cprstn54zz@att.net
Message-ID: <3d7bc697.119246359@news-server.optonline.net>
Source record: 39656

I thought I would pass on the results of my efforts to find a cheap and convenient way to power up Yaesu HT's in the field when the internal NiCd or Lithium battery has discharged.

As it turns out (for VX-150, VX-5R and HX460S, at least), a 6-battery AA holder filled with alkalines or NiMH's do the trick. You need a minimum of 6V at the jack to power the radio and less than 9V will not charge the internal battery. So 6 AA NiMH's (7.2V) or alkalines (9V) will power the radio but not charge the internal battery. The holder costs around $1.50 and the power plug is around $1 at RS.

3201. Anyone do repairs on Kenwood gear?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-09 02:30:28 UTC
From: Steve Silverwood <kb6ojs@arrl.net>
Message-ID: <MPG.17e5a7744d93cbfc98969e@news-server.socal.rr.com>
Source record: 39662

I have a Kenwood TS-520SE rig sitting here at the house which requires service.

I've purchased an FT-817 so I am not totally going through withdrawals, but I'd like to get the Kenwood fixed up as a backup and semi-QRO rig. It's got excessive plate current which I can't adjust out using the left-side controls. Also, the 10m-high section was modified by the next-to-previous owner to operate on the CB bands, so I'd like to get that re-crystalled and realigned for proper by-the-book operation.

Sad to say, I do not have any test equipment so I am not equipped to do the troubleshooting and repair job on my own. Last time I sent something to Kenwood they botched things completely, so I'm not in the mood to trust them again, hence the search for a third-party service center.

Thanks in advance for any info.

The "alkaline trays" as Yaesu calls them are excellent for the VX-150 (6 AA's and full operating capability) but unsatisfactory for the lithium-powered models, where they basically make the radio RX only (less than 1 watt on TX and very short battery life if you do even that).

Lead-acid cells are heavy and have a very low power density -- less than 1/2 that of alkalines. By weight, their density is perhaps 1/4 that of alkalines. OK when your car or boat is carrying them; not so OK when it is you.

That being said, if you have one along anyway, you might as well use it. To avoid charging the internal battery, just remove it.

Sounds like a bad pin diode on the output circuitry or a bad solder joint on the same diode. Watch your current on an amp meter if you lose the output and current stays up, bad solder joint or diode. If the power drops out and current goes way down almost to receive level, then bad PA module. Hope that helps. Bob N4BK

Hi to all,
I have a very nice GSB-100 Gonset transmitter for sale or possibly trade. It has a new Peter Dahl power transformer installed, new caps, tubes, power divider etc. Tested and works. Front panel is great, cabinet has been repainted. Transformer alone was $185.00 and asking $300.00. Prefer pick up in West central Arkansas, but will ship if necessary. Pictures available!

Please respond direct to wb6vse@ipa.net

Thanks es 73

see auction at ebay:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1379419800

For Sale:

One Accutrak record changer Turntable

it is literally brand new in the box with receipts from the day it was purchased.

never set up. stored in its original box in a basement since the day it was bought.

never assembled - original packing styrofoam, inner and outer box. the only thing missing is the 9V battery for the remote control. includes the main unit, lid, turntable mat, remote control transmitter, remote control receiver, spindle, tonearm weight, setscrew, screwdriver, grounded rca phono cables, manual, unused warranty registration card, store receipt, and credit card receipt, the latter of which is dated 7-5-1980. also contains ADC LMA-3 cartridge and stylus attached to the tonearm. the tonearm with its original shipping padding is visible in one of the pictures above; the whole base of the unit is in the original factory plastic wrap and the original shipping retaining screw has NEVER been removed.

the novelty of this unit is its ability to play any track in any order from any of the records queued atop the spindle. the way it accomplishes getting records back up off the platter is with three small metal fingers that extend from inside the spindle and lift the record back past an interlock.

for jumping around different tracks on the same record, the player uses a light activated sensor on the tone-arm to sense the gap between tracks on the record and positions the needle accordingly.

the turntable cabinet has a row of pushbuttons on the front panel, not very visible in any of the pics. the unit has an ultrasonic remote to duplicate the functions of the front panel.

definitely a collectors item.

thank you,

saviormoney

3231. The three buttons on my VX-5R lithium battery?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-09 23:57:38 UTC
From: cprstn54zz@att.net
Message-ID: <3d7d320b.212290437@news-server.optonline.net>
Source record: 39692

Why are there *three* contact buttons on the back of the lithium battery for my VX-5R? The leftmost one seems to be ground and the other two +8.4V.

Is the desktop charger (CD-15A) a "smart charger" for the lithium battery or are the smarts in the radio or battery? See: http://www.universal-radio.com/catalog/ht/4555dia.jpg

It's pretty cheap ($20) if it's smart. Maybe the smarts in the battery make the battery look like a NiCd to any charger. There have to be some smarts in the radio or battery because the lithium battery fast charges from the radio's 12V jack.

Can I use my Maha MH-C777 NiMH-NiCd charger on these contacts? See: http://www.thomasdistributing.com/maha-mh-c777.htm

Given the sensitivity of lithium batteries to overcharging, this is not a good area for experimentation.

Have several CDROMs for sale to those interested in military radios and electronics:

240+ Military Radio Manuals on Cd-ROM, includes PRC, VRC, GRA, SGR, TRC, FRC, GRC, ARC, and more. Includes almost 700 megs of operations, maintenance, maintenance repair parts, installation manuals (for a variety of military vehicles).

Also:

170+ Test Equipment Manuals on CD-ROM, includes maintenance, maintenance repair parts, and calibration for Fluke, Tektronix, and Hewlett-Packard equipment.

Sell each for $20 or both for $30. I would be happy to Email a listing of each disk, showing all manuals listed (in Adobe Acrobat .pdf), if you Email mdavids@erols.com. Thanks for your time!

Going for my no-code licence soon,

Mike

There is a new Ham Radio Portal online at

http://www.hamradio-portal.com

This Portal contains news, Information and

special topics like Echolink software and many more.

It has a Weblink and download database.

A new Webboard to discuss topics is also there.

You can also submit news and topics what

comes available on the top of the page!

It should not to be in compete with other Portals.

Just a new one with a new look and nice features.

We hope to see you there!

Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,sci.electronics.design

I am attempting to build a project that uses a quadfilar wound FT50-43 toroid. I am having trouble interpreting the schematic and I'm not sure if the actual wiring of the toroid is correct. Can someone confirm whether or not my wiring scheme is correct? The toroid schematic and my wiring interpretation are at http://www.mindspring.com/~elecman/helpschematic.jpg

Thanks in advance for responses.

Bill

3244. FS: New Military RTTY Teletype Keyboard/Terminal

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-10 21:24:33 UTC

I have (2) Model # AN/UGC-74B(V)3 brand new military communications keyboard/terminals. Very heavy duty (100 lbs. each). Rubber booted keys and switches. These come with the (2) handle military style aluminum cases with pressure locks. Designed for use with most Harris military radio's for Baudot applications. One unit has an unopened roll of teletype paper and new ribbon included. I would suggest that these be pickup only here in RI.

$50 each

Thanks and 73.

3245. How do I connect SCS PTC-IIe to Kenwood TH-D7AG?

Hi Bill,

Quadfilar means that four (4) wires are wound together, in parallel.
Your drawing needs color for each winding to clearly answer your
question, also, it needs phase dots on the schematic to correlate
correct connections. 1 & 3 appear to be backwards, as do 5 & 7; but
without the individual windings visible, or phase information, it is
difficult to say.

What you have in your mind, and what you have posted may well work,
but without these details, I for one, could not respond in the
affirmative. Reasons for my saying 1 & 3 appear to be backwards is
due to all windings starting at the same end (presumably 1,4,5,8)
would not find 1 & 3 in proximity with 2 & 4 connected unless there is
a phase inversion not shown. [Same goes for 5,7 and 6,8.]

Hi Richard,

Thanks for the quick response. Perhaps I posted this a bit too soon and maybe should have contacted the designer of the circuit first, which I have now done. Thanks for your input and sorry for the inconvenience.

Bill

Hi Bill,

No inconvenience at all, you came more prepared than most who have
grand designs of naming an antenna after themselves. You might also
include what you are going to use this for - it could be significant
to consider in light of that application. And you never know, someone
else might chime right in with a less equivocal (and still correct)
answer than mine.

I picked up a Shinwa SC350X 16 channel low band commercial radio, that I put into 6 Meter amateur service. It works great, but does not scan.

Does anyone know how to enable scanning on this radio?

Shinwa (both US and Japan) disavows any knowledge about the programming of this radio.

3250. Re: How do I connect SCS PTC-IIe to Kenwood TH-D7AG?

Source record: 39611
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment

SCS and their distributors sell a cable with the PTC-II connector on one end and nothing on the other. Purchase a connector to match the Kenwood and solder it on the other end.

3255. Backlight on Icom T81A Display

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-11 03:09:10 UTC
From: n4mbi@earthlink.net
Message-ID: <3d7eb1e3.19195580@news.earthlink.net>
Source record: 39616

The display backlight on my Icom T81A seems to be showing only one backlight on the right side of the display. I know it has two backlights behind the display according to Icom. It sure looks differently from the T8A display,which clearly shows the two lights. Has anyone noticed this on their T81A? Or does the backlight on the left side just not show as clearly on the T81A ??

Thanks,
Rick, N4MBI

try communications specialists they advertise in AESs catalog
they make 3rd party tone boards for many older radios

Hi,

I have a Rigblaster Plus and am getting an SCS PTC-IIe. I'd like to have both connected to ACC1 at the same time. Is there a cable that will allow this? Worst case, is there an ACC1 switch I can buy?

Thanks,
John

Hi Bob
Checked the meter. On high power using 9 amps. When it drops out the
amps go down to 2. Med. Power is 5 amps and again down to 2 and on low power
3.3 amps down to 2 amps.
Looks like the PA !!

Why not just build an A/B switch with a 4-pole switch, a box, and a couple of connectors? The most you need to switch is rx audio, tx audio, ptt, and +12 volts for the PTC-II. Use a non-shorting type of switch.

I'm selling my Tek 494P spectrum analyzer after a recent upgrade. This rig has just about every conceivable manual and accessory and comes with a 3-day buyer inspection period. It's the cleanest one I've seen.

This particular unit has the mixers needed for coverage between 10 kHz and 40 GHz, and includes a built-in signal counter with 1E-9/day timebase. Useful for IMD measurement, harmonic and spur evaluation, FCC pre-submission testing, synthesizer noise characterization, and too many other applications to list.

No reserve, starting bid $1.00.

I have a DSI Model 5600A frequency counter, 50 hz to 512 mhz.

It's a hair off frequency and would like to adjust it.

DSI appears to be out of business and nothing is found searching the web.

Anyone have a manual or alignment procedure I can get a copy of.

Thanks to Rick & to the others that replied today. I tried with a 9VAC wallwart & it works fine. Not bad for $1, at that price I figured it was a paperweight. I was nice to be proven wrong. The capacitve paddles are flaky but it works fine with a regular set of paddles.
Thanks again & 73,
de N2KWK Jeff

It would be great to have a historical list of transceiver models for each manufacturer - with a little description of each and a price/current value. There are so many for sale but the model numbers mean nothing to me. Maybe others have the same problem?

The manufacturer's websites are only interested in current models it appears. .... etc.

Doug,

With 2m HTs available used in the $80-$100 range, it would be a better idea to pick up a good used HT that already had CTCSS installed. Unless you are skilled in working on crowded circuit boards, installing a tone board could be tricky. And then you are limited to a single tone. You'd have to open up the radio and change some DIP switch settings each time you needed to change the tone. Not worth the effort, IMHO. Just looked in the AES catalog, and the ADI AT-201HP sells new for $99.99 with lots of features, including CTCSS encode/decode. Or you could look for the venerable Radio Shack HTX-202, which generally sell used in the $75-$85 range. You can use the Santec for APRS or packet work.

Hi Fred:

Great idea - something for a superb web page project.

Universal Radio's Fred Osterman has put together several books
on radio history that you might also find interesting.

Looks good, there was an SB filter thread on the Yahoo group,
amateur-repairs. I don't have any filter info on my round n green
webpage, http://www.kiyoinc.com/heathstuff.html There are other
musings about SB's that you might find interesting.

This page is very preliminary so website critics, go easy.

I'm interested in an AM filter too. I've bid on several SB-313's and
they are going for WAY more than I'm willing to pay. I guess people
are buying them for the AM capability.

There are two different AM filters, 3.75 kHz and 5.0 kHz. I'd consider
building one even wider, 6.0 kHz or even 8.0 kHz, for international
broadcast.

Good idea, but for me: time is money. I'd rather spend the 2 or 3
hours it would take to find all the parts and assemble them doing work
that I enjoy and get paid for. Pay someone else to do the kind of work
they enjoy (building A/B switches) and then enjoy the switch.

I got this unit from a guy that likes to buy stuff and then for some reason doesn't use it. He has the money to do it and does it all the time. I picked it up in a trade for other stuff. The unit has been sitting for a long time and it looks just like when it was purchased brand new. Here is a link to look at the picture of it. http://www.rigpix.com/aor/aor_ar1500.htm

The picture could very well have been taken of the unit I have, that's how clean it is. It is a 10 cosmeticly and electronicly
The unit does AM/FM/WFM/SSB from .5 to 1300mhz no gaps on this early model.

Comes with manual, AA pack, original battery pack, wallwart charger. Now, I have no idea what this is worth since it's not a current model.

Should we say $160 shipped COD, prepay or Paypal.

If you're an arrl member, also look at the product/lab reviews at the arrl.org web site.

Picking from the big three radio makers is about the same as picking from the big three car makers -- most models work well; it often comes down to personal preference. Certainly, there's no such thing as one "best" radio. In your price range, tho', you should find something nice.

Fred,

A couple of ways around this. First, check out www.RigPix.com . This
site has pictures and specs for 2300 radios, arranged by manufacturer.
Sometimes the information is very good, sometimes it is incomplete
depending on what folks have sent the fellow hosting the site.
However, for popular equipment you can usually count on a photo, RF
power output, frequencies, modes, and approximate date of
manufacture. Sometimes you also get original selling price, power
requirements, dimensions and weight, impedance, and other info.

There are two sources for prices. The first one is at:
http://www.aade.com/hampedia/prices2.htm
and it has actual e-Bay SELLING prices. Near as I can tell, this guy
has a robot that queries completed auctions for final sale prices. It
lists the model together with high-average-low selling prices. Since
these are completed auctions, it is a good estimate of market value.

More datapoints can be had from:
http://www.geocities.com/CapeCanaveral/Hall/8701/ham/boneyard.htm
which does something similar to the link above, but instead shows
ASKING prices, which might not be as reliable although the two
databases are not that far apart. He gets his data from a variety of
sources.

With a little effort, you can combine the two price lists into an
Excel spreadsheet and then export the results to your Palm Pilot.
When I see something I am interested in, I just whip out the Palm and
I have a good idea of the fair price range in seconds. I have about
2500 records from the Boneyard site, and 2400 from the Hampedia site.
This is a very handy tool for taking to ham fests! Next project is to

try to merge the RigPix data with the price lists to have a single database, but that is not easy to do since RigPix is not written in a database friendly format.

You will find there is no such thing as a "perfect radio" but it usually comes down to learning just what you need after a few years of finding out what you like and what bothers you personally. Most models have their own learning curve before you fully appreciate their design.

What you might be missing is that different sections are updated at
different times, the date appears just above each list. Yaesu was
updated in February this year so the data is relatively fresh, some
other popular brands (ICOM & Kenwood for example) have much older data
(October 2000).

That really isn't a problem for the newer and more popular rigs since
it is easy enough to get recent data directly from the e-Bay site.
But for some listings, especially those with few data points, the
buyer needs to be very careful.

3309. FT-8900 - Crossband & can it be remote controlled via DTMF?

Source record: 39521

If you are about to go mobile, hey, it's time! Those of us in the South are finally getting cooler weather, and it is a great time to get out and do some installing! Please take a look at www.qls.net/k4kwh to purchase the finest HF mobile antenna on the market. They are a FULL 2" dia and wound onto black Nylon forms with #14 wire at 8 TPI to give high power handling and surprising, effective mobile QSOs! Don't be fooled by those that claim that "no matching is needed" because what they are doing is "transformer winding" the loading coil to give high resistance that "translates" to 50 ohms total in the system. The radio doesn't care WHERE it gets 50 ohms from, just so it's there. Go for the gold with the Carolina Cyclone.

I made dozens of these
Rocks:
3393.7 kHz
3396.8 kHz
Effective series resistance: 25 ohms maximum
Load capacitance: 35.4 pF
Frequency tolerance: + / - 50 Hz

Values of C1 and C2= .5 PF (yes point 5) and gimmicks dont work to well
I never understood this, and had sharper cleaner performance plots omitting
C-1 and C2.
(C-1 and C2 ARE in the original Heath blueprints)
Value of C3=56 PF
Winding details for L1: (use a pull from bad 2.1 KC SSB filter, they have 2
of these cans).
I have used 2- fixed 2uH chokes in the past and a mini variable from MOUSER
for C-3 in the past

In the past, I've always been able to find all kinds of flexible splitter "y" cables at Radio Shack. You might try another of their stores. Their inventory varies from store to store. Also, check Surplus Sales of Nebraska -- they have multitudes of cables, adaptors, etcetera...

Or, one of the big ham places -- AES...

Message-ID: <szag9.458596$UU1.74767@sccrnsc03>
Source record: 39536

Yaesu 817 with factory mic, DC power cord, rubber duck antenna, cigarette lighter DC adapter, Maha 1700 mAH NiMH battery, AA battery tray, manual and box. Also includes a neoprene case and a Superantennas MP-1 side mount. I am keeping the MP-1 for use with other rigs. Also have an unbuilt speech compressor kit for the 817. Radio is in nice shape, very little use. There are a few scratches on the bottom of the radio where it sat on the power supply, but no other marks or scratches. Can e-mail photos on request.

I am looking for an Alinco DX-70 in like condition plus some cash in trade for the 817 unless the DX-70 has a bunch of accessories also. Prefer local trade in Colorado, but will consider out of state trades. Cash price for the 817 is $550 delivered. e-mail is longrange10@hotmail.com. Ken

THIS IS A NEW POST !!!!!!!!!!!!!!!!!!! NOW PRICED SEPARATELY...

I have a list of some NEW goodies, hope you like them.................

Yaesu FT-102 Transceiver, & Yaesu MD-1B8 Desk Microphone...$460.00

Yaesu FV-102DM External VFO...........$175.00

Yaesu FC-102 Antenna Tuner.............$175.00

Yaesu SP-102P Phone Patch/Speaker.....$100.00

Yaesu FT-757GX II Transceiver
Yaesu FRB-757 Amp/Relay.........$425.00

Yaesu FT-707 Transceiver, hand microphone $285.00

Yaesu FC-707 Antenna Tuner...........$150.00

Yaesu "Brand New In The Box" FV-707DM External VFO...$175.00

Yaesu "Brand New In The Box" MR-7 Rack for the FT-707....$39.00

Yaesu "Brand New In The Box" FRB-707 Amp/Relay.........$50.00

Yaesu FT-480R 2 Meter All Mode Transceiver........$275.00

Yaesu YS-2000 FT-101 Matching SWR/Power Meter.......$90.00

Yaesu YO-101 FT-101 Matching Scope........$80.00

Yaesu FV-101Z FT-101ZD Matching External VFO.........$100.00

Yaesu FF-501 TVI Filter.............$20.00

(2) Yaesu Landliner Speaker/Phone Patch........$50.00 each

Nye - Viking MB-V-A 3000 Watt Antenna Tuner.........$500.00

" It sells NEW for about $900.00"

Ten Tec Model 4229 Antenna Tuner $170.00

Henry 2K Classic Console Amplifier 10,15,20,40,80 meters.........$975.00
Pick Up Only in Los Angeles........
"It sells NEW for about... $2000.00"

Heathkit SB-221 Amplifier.........$525.00
10-80 meters, nice condition

PAL 120+ 12 Volt Tube Amplifier........$99.00

PAL KW-1 SWR/Watt Meter.....$40.00

Heathkit SB-614 Scope.....$100.00

Mirage B-108 2 Meter Amplifier 10 watts in 80 watts out.....$75.00

Bird # 43 Wattmeter.....$175.00
"It sells new for $309.00"

Bird 100C 100 Watt Element for 100 - 250 MHz.....$50.00

Bird 250H 250 Watt Element for 2 - 30 MHz.....$50.00

Bird 1000H 1000 Watt Element for 2 - 30 MHz $70.00

Bencher Keyer BY-2.....$70.00
"It sell NEW for $125.00"

Ham Key $40.00

"New In The Box" Alliance Rotor.....$90.00

Astron RS-35M 35 Amp 12 Volt Regulated Power Supply With
Meters.....$90.00

AEA MM-3 Morse Machine, Original box, and Manual.....$80.00

MFJ - 1278 TNC.....$99.00

(2) MFJ-1272B TNC/MIC Switch.....$10.00 each

Heil HM-10-5 Desk Microphone Wired For Yaesu.....$70.00

Gallon Dummyload.....$20.00

Is he forcing you to buy it? I checked on Ebay and the other ones are going for around the same amount. Considering that he is also paying for shipping, then I don't see your problem. You can always go buy a new one. However, they're going for $629 plus shipping.

> Thanks for your suggestions and help.

The basic scheme is the half-lattice filter; in this case it's
to of them cascaded.

This sort of filter was common when hams started building crystal
filters for SSB, in the fifties. The best place to find information
about them would be articles from that period about making them,
or books like the ARRL "Single Sideband for the Radio Amateur" or
CQ's "Mew Sideband Handbook" that collected such articles. Back then the
topic was new, so the details were all there. It sort of faded
from view, when commercially made crystal filters became available.
You might find things in more recent handbooks again, though ladder
filters have taken over, because there are advantages of their
design.

I think the scheme saw common useage back then because of the
availability of cheap surplus crystals in FT-243 packages (ie,
cases that you could easily take apart). Then, hams would pick
an IF frequency where crystals were commonly available, and then
grind one or both sets to get them on the needed frequency. Of
course, they were starting from scratch and so picked their
IF to match the available crystals. As I said back in July,
you have to use the IF of the Heathkit, and so you aren't likely
to find crystals on the needed frequency. You'll have to have
them made, and I think you'll have to dig deeper in order to
figure out how to order the crystals.

I'm not going to read through the old articles. I do recall
people saying things like the bandwidth of the resulting filter
would be 1.5 times the spacing of the crystals. But that's rough,
and the better builders would analyze the crystals. You have
the reverse problem; you'll have to figure out the spacing before
you order.

One thing, as someone else mentioned back in July. The simplest
solution would be one half-lattice filter, ie two crystals. The

selectivity would be the same as two cascaded sections, but the shape facter would not be as good. It would be cheaper, but if you find the results less than satisfactory, you may have been better off ordering 4 crystals at the same time, rather than risk the second two not matching the first.

The component values will depend on the filter. The input and output load is going to impact on the filter.

> Miek AB7RU

Yaesu does in fact state the 8900 will cross-band, and I only assume it is between 2m and 70cm. They make no mention of it being remote controllable via DTFM, though, so I am betting it will not. I have an Alinco DR-610TQ, and that is a nice feature. On a related note, Alinco will be releasing their new DR-620 before Thanksgiving. From what I have been able to gather, it looks like it will be fully featured like the radio it replaces (the 610), so I am guessing it will be remote controllable. It does come standard with a remote mount face and bracket, which is nice. The 610 bracket was optional. Too, it will receive FM broadcast, which might be nice at times. I suspect they will have to price it under $450 since the FT-8900 is right now, but we'll see. I will be checking the specs myself when they become available, since I like my 610 so much and I have not found another with all the features it has. I need one to put in my truck.

Source record: 39304

Looking for a stand-up charger for my new Vertex VX-150 HT. I bought a larger capacity battery (1650 ampere) and I don't like the wall wart charger that came with the radio. With the desk top charger, I can leave a spare battery in it with the other on the radio. Can't do with the wall-wart.

If anyone has one lying around (the NC-77B is replaced by the VAC-400, and it was used for several of the Yaesu/Vertex rigs), I would like to hear about it.

Thanks,

Nate

You call QMX Crystals in Texas and tell them what frequency and what
resonance and what load capacitance. You give them a credit card.
Crystals arrive.

ICM also makes excellent crystals but for a lot more than QMX charges.

Unless you can find any beter info for that amp it should have a carrier of
1/4 of the maximum output power . That is unless at that power level it
starts to overheat because of the duty cycle.

Source record: 39323

The use of AM on the 2KL is dictated by the xciter used. The typical ICOM can only run about 20-25 watts on AM and still sound decent.
The 2KL should never be pushed past 200 watts of carrier on AM, and 500 watts PEP modulated evelope.

Source record: 39333

I just picked up a new battery pack for my dual band Handheld transceiver and noticed that the date code is 9711. It was obviously new, still in the factory wrapper, purchased from AES. Does it make much difference how old a NICad is before you start using it? It's a 6 volt pack that measured 6.33 volts after charging. I would guess it has to be a 5 cell (in series) pack to get the 6 volt rating. The 6.33 volt measurement I took would tell me that none of the cells cell are shorted. Should I have any concerns?

Thanks

Tony

ARRL Responds to 220 Threat !

September 13, 2002
ARRL News

http://www.arrl.org/news/stories/2002/09/13/100/?nc=1

NEWINGTON, CT, Sep 13, 2002--The ARRL has taken issue with a suggestion made in a non-Amateur Radio-related FCC proceeding to turn the 222-225 MHz amateur allocation over to commercial interests. In reply comments filed this month, the League urged the FCC to "do nothing" with the proposal of Data Comlink (DCL), a consortium of 20 electrical coops and allied companies.

"ARRL presumes that the proposal by DCL for reallocation of the 222-225 MHz band will not be seriously evaluated by the Commission, as it is well outside the scope of this proceeding," the League said in its September 5 filing with the FCC. Until DCL raised the 222-225 MHz suggestion last month in its own comments in WT Docket 02-224, the ARRL had remained silent in the proceeding.

DCL claimed in its comments that the amateur allocation at 222-225 MHz "is being underutilized" and that the band "would be much better utilized for commercial use." DCL suggested that both 217-220 MHz and 222-225 MHz might "be made available to the Commission for commercial use" through modification of the FCC's Part 90 rules.

ARRL asserted that the band is not underutilized and "remains a critical VHF allocation" for amateurs. The League pointed out that the ARRL 2002 Repeater Directory--albeit not a comprehensive listing--lists 1690 repeaters throughout the US, indicating an even larger number of individual users. "Indeed the number of individual amateurs using this band has increased steadily since 1989, when the amateur allocation at 220-225 was reduced by 40 percent," the ARRL said, "and now much commercially manufactured equipment is available to amateurs."

DCL had claimed that "only handfuls [sic] of individuals in the Amateur Radio Service even use this spectrum, while hundreds of thousands of potential commercial users wait with no alternatives."

The League characterized as "invalid" DCL's arguments in favor of reallocating 222-225 MHz from the Amateur Radio Service and noted that the FCC earlier this year had set aside an additional 8 MHz of spectrum for Land Mobile Service operations.

The League's reply comments in the DCL proceeding are on the ARRL Web site.

The ARRL has not commented in an unrelated Petition for Reconsideration filed by Warren C. Havens on behalf of himself and Telesaurus Holdings GB LLC, in which he holds a majority interest. Among other grants, Havens holds Automated Marine Telecommunication Services (AMTS) licenses in various states as well as Land Mobile Service Multilateration and VHF Public Coast licenses.

Filing last month under PR Docket 92-257 and RM-9664, Havens is seeking to have the FCC reconsider its decision to auction certain AMTS spectrum and instead adopt his "Advanced Technology Land Infrastructure and Safety Service" (ATLIS) proposal. Under that plan, Havens includes the amateur allocations at 222-225 MHz and 902-928 MHz. In the case of 222-225 MHz, Havens wants to see it reallocated from amateur to public safety use. His ATLIS plan proposes to share 902-928 MHz on which amateur are secondary. He suggests, however, that if amateur use were to become a problem there, the FCC might impose restrictions or phase out amateur use altogether.

Havens said he planned to submit his ATLIS proposal to the FCC's Spectrum Task Force as well as in filings on dockets that involve spectrum he's included within his ATLIS scheme.

This is the first AL80 ameritron, made in the mid 80s. It has the single meter on front and one 3-500z tube. Good for 850 plus watts. Also has a pi tuned input. low SWR to the radio. Cover 10-160 meters. The amp in very nice condition, only thing done to it was having the cover professionally repainted. The 3-500z tube(RF parts Graphite) is also new with very few hours on it. A very nice compact & attractive amp.....With owners manual

$450.00 plus shipping
Tube shipped separately

Nicads are 1.2 volts per cell. If you have a 6.0 volt battery pack, then it looks like all is well.
Only use will tell if the pack has not lost its ability to store the power it should.

Back when I worked for Motorola, the shelf life of NICAD cells was spec'd at 5 years. If you just bought from AES I would call them and ask about warranty for that battery. If it goes flat in 6 month's will they replace it? My new ICOM T81A radio has a one year warranty and I don't see any exclusion for the battery. The ICOM NIMH battery has no date code, rather a serial number. I would expect a new battery from AES to have some warranty. You should give them a call and ask them how they handle it. Does the sales receipt have the date code or serial number?

Drake R-4 Receiver, T-4X Transmitter, MS-4 Power Supply/Speaker with original manuals. The R-4 comes with several extra crystals, which are really not needed if used with the the frequency synthesizer. $350.00.

Frequency synthesizer for the above, which I designed, built and published in the August 1972 issue of "ham radio" magazine. I will supply an original issue of the magazine (cover slightly torn), as well as schematics of all the circuits which improved performance but were never published. This synthesizer provides complete coverage from 500 kHz to 30 MHz, thus including the WARC bands. $275.00.

If necessary, I will sell the synthesizer separately, but if a buyer takes all, I will reduce the total price to $600.00.

Buyer pays shipping. However, I prefer a pickup in the San Francisco Bay Area or will arrange to meet at a reasonable location.

Bob, W6NBI

3390. Need help with Wavetek 159 signal generator

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-15 00:33:45 UTC
From: plalbrecht@aol.com
Message-ID: <20020914203345.03304.00003244@mb-cs.aol.com>
Source record: 39401

I just got a Wavetek 159 signal generator. Either it's not working right or I'm missing some keystroke combination to do what I need.

I can't seem to be able to select mode (continuous, gated, triggered) or waveform (sine, triangle, square, sawtooth). It appears to be permanently set on continuous signal, sine waveform.

Am I missing some pushbutton sequence to select these things? The intuitive method -- signal off, push "waveform" button -- doesn't do anything. The LED stays on the sine wave. The same method though works fine for setting frequency, amplitude, offset.

Any ideas? Better yet, anybody got a manual?

Thanks,

Pete

ICOM IC-970 (japan 10W model) Questions

I have just acquired one of these used from Japan to keep as as a spare.

The questions I have are:

1. This Japan model is a basic IC-970 (no suffix), is a 10 watt unit and has limited bandwidth 144-146 and 430-440 MHz. This is no problem for domestic weak signal, but I would like to get the US FM band portions activated. I see that the internal ROM IC-3 has a part number SC1194-1. The manual for my IC-970A covers models A/E/H including europe

models. In the manual, a part number SC-1128 is listed presumably for the US, Europe, Sweden and Australia versions.

Does this mean I have to change the ROM to get domestic band? I see no other differences operationally to this radio (CTCSS etc). A friend in Japan has located some ROM's being sold on the Japan Yahoo Auction that are supposed to open the radio up. Has anyone heard of this, would they be the correct ones?

Or can I simply change the resistors R18X- R19X on the CPU for the US model?

2. Is anyone familiar with the nomenclature of the CPU signals. I came across the following signals from the logic board that
I can't figure out. They are from one of the expander chips and are called: HPI, and XHRT. The first I think has to do with cross band repeat option (mod) and the second I think is for the high speed CW break in. As this radio hasn't had the cross band repeat mod and doesn't

have the keyer, I haven't tried to exercise either of these lines. Does any one have a listing of signals commonly used in ICOM transceivers?

3. Is anyone else aware of any differences between the Japan and US versions other than what I have noted?

Thanks in advance

Sorry subject line should read:
ICOM IC-970 (japan 10W model) Questions

I have just acquired one of these used from Japan to keep as as a spare.

The questions I have are:

1. This Japan model is a basic IC-970 (no suffix), is a 10 watt unit and has limited bandwidth 144-146 and 430-440 MHz. This is no problem for domestic weak signal, but I would like to get the US FM band portions activated. I see that the internal ROM IC-3 has a part number SC1194-1. The manual for my IC-970A covers models A/E/H including europe

models. In the manual, a part number SC-1128 is listed presumably for the US, Europe, Sweden and Australia versions.

Does this mean I have to change the ROM to get domestic band? I see no other differences operationally to this radio (CTCSS etc). A friend in Japan has located some ROM's being sold on the Japan Yahoo Auction that are supposed to open the radio up. Has anyone heard of this, would they be the correct ones?

Or can I simply change the resistors R18X- R19X on the CPU for the US model?

2. Is anyone familiar with the nomenclature of the CPU signals. I came across the following signals from the logic board that
I can't figure out. They are from one of the expander chips and are called: HPI, and XHRT. The first I think has to do with cross band repeat option (mod) and the second I think is for the high speed CW break in. As this radio hasn't had the cross band repeat mod and doesn't

While in Japan from 1990-93, I purchased an IC-729 (HF plus 6-meters, gen coverage receive 1.6 MHZ to 30 Mhz) and an IC-3SR (a hand-held with gen coverage receiver, 25 - 950 Mhz, and 430-440 Mhz - the rcvr covered 800 Mhz cell-phone freqs, which is not prohibited in Japanese domestic radios). Also purchased the Japanese version of the Yaesu FT-470 dual-band handheld.

The Japanese 80 and 40 meter bands are different from the US bands and the HF rig would not cover the US portion of these two bands. I found a mod that involved clipping two diodes. Of course, that enabled the rig to transmit across its entire range so I have to watch it when I am close to the band edge.

The UHF handheld and the dual-bander were different matters. I had to return both to their respective distributors in the States where they replaced the ROM or something that opened both up to the US VHF and UHF band. When the ROM was replaced in the IC-3SR, it did not change the gen coverage receiver, just the 430-450 transmit.

There may be a mod that you can use somewhere on the Internet -- check out the various ham pages, such as A6CV, for a link to mods, search under IC-970, etc. If not, back to the factory.

Good luck.

Hello,

This very special Siemens valve can be used as a driver for 300B and
similar. It is a pentode with a heater of 20V 0.125A, Va 225 Vg2 155V
Ia 16mA Ig2 3mA S = 6.5mA/V Wa 4W max Ik max 30mA. Loctal socket.
I have several in stock at NOK 172.- each or about $ 22.90. They are
all NOS and in original boxes. Pictures and data on my web site -
www.demostenes.no

Best regards,

Arnold Goks&#65533;yr
DEMOSTENES - N6899 Balestrand, Norway

Thousands of different valves in stock as well as
sockets,transformers,books,caps,resistors and
other components. Web site is updated every week.
You can order on-line.

3398. FT840 gone deaf - help!

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-15 11:48:46 UTC
From: Martin Peters <martin.peters@ntlworld.com>
Message-ID: <Et_g9.109$8r5.59902@newsfep1-gui.server.ntli.net>
Source record: 39409

Hi guys,

I wonder if anyone out there is able to advise? After years of trusty service my 840 has gone deaf.

I THINK I may have caused the fault myself by TXing with low power AM whilst tuning right across the frequency range (into a dummy load). Next time I tried the rig it was many S points below normal.

If I touch the antenna onto the various band-switching diodes on the main board it springs back to life, so it's something common to all.

Any ideas much appreciated.

Martin - G4EFE

3399. Need help Yaesu FT 100d on 9600 baud packet

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-15 11:58:53 UTC
From: bill kurtti <bkurtti@utma.com>
Message-ID: <3D8473E7.B5BA7891@utma.com>
Source record: 39410

I am having trouble getting my FT-100-D Yaesu & A MFJ 1270C
working on 9600 baud packet. I have tried everything I can think of..
A Kenwood TH 733 works very well connected to the same TNC.
The Yaesu works very will on 1200 & 300 baud. I am using the
Yaesu CT-39 packet cable Hooked up like this

DATA JACK PIN
YAESU MFJ-1270C
1 TX AUDIO 1 MIC.AUDIO
2 DATA GROUND 2 GROUND
3 PTT 3 PTT
4 RX DATA 9600 4 RECEIVE AUDIO
5 NO CONNECTION
6 NO CONNECTION
HEAVY BLACK GROUND TO SHIELD (I HAVE TRIED IT
OPEN ALSO WITH NO RESULTS)

It receives the connect msg from another 9600 baud station but can not
transmit a readable response in return. I dont have a deviation meter
but the transmitted signals sound almost exactly alike.

My Settings are

15KC FM

MENU
28 AFSK LEVEL 8 (best sounding packet, but I have tried
everything from 0 to 100)
33 FM DEV 5
34 AFSK MODE PCK- F
37 PACKET RATE 9600
ALL REST ARE ON DEFAULT SETTING

Is there anyone that has a FT-100-D that has had the same problem & was
able to work it out.

Their sponsor was appealing for support from the readers a few weeks back, complaining that it and the Contesting sites were using more than a T-1 bandwidth and were not able to pay for it. They stipulated at the time that they were not going to keep it up as a charitable contribution. Since both sites have disappeared simultaneously, I suspect they did just what they said they would do.

Just a rumor, But I read they were hacked and are rebuilding the system
right now.

There is also a worm (think virius for servers) running around right now. so
it could be that. Just a wild guess on my part.

3413. ICOM 746 High SWR Problem

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-15 19:12:53 UTC
From: "David M. Hitchner" <biteme@spammers.net>
Message-ID: <JU4h9.131360$2L.6508660@e3500-atl2.usenetserver.com>
Source record: 39424

I am having problems with my ICOM IC-746.

I have been fighting a high SWR problems on the 2 meter band
for over a year now. I have gone through several different cables
and several different antennas in an attempt to solve the problem.
Although the my antenna systems all looked good using an
analyzer and external SWR meters, the SWR meter on the IC-746
climbs rapidly as power is increased and sometimes limits the
power to less than 50 watts on different parts of the band and
with different antenna systems.

Yesterday I had the opportunity to put another IC-746 in place of
my radio and it worked perfectly. This leads me to the conclusion
that the problem is in my radio. Any suggestions on how to solve
this problem or will I need to send the unit in for repairs? I have
some experience in electronic servicing so if there is something
I can do myself I would rather do that then loose my radio for a
while.

If I need to send the unit in for repairs, any suggestions on where
to send it. It is no longer in warranty.

3417. Re: Ameritron ALS-600 Solid State Amp

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-15 21:55:17 UTC
From: sdsharpe_nospam@earthlink.net
Message-ID: <9l7h9.1167$E53.117649@newsread2.prod.itd.earthlink.net>
Source record: 39428

I wouldn't buy another Ameritron ever. I bought their ALS-500 mobile amplifier brand new($800) and had nothing but trouble with it. Phone calls to Tenn. or where ever they are built only re-enforced my resolve to never buy from them again! Yes, defective relay,etc.,etc.,etc. and the techs admitted the problems they've been having with the amp. Thought I'd put this out here so no body else experiances the grief I have! WB6KIO/Steve

Hello All,

I'm hoping that they get back up! eham.net is easily the best amateur radio site on the net.

And, yes, I made a contribution a couple of weeks ago, in hopes that they would be able to continue!

73,

Bob WA5IHZ

3419. Re: NiCad Battery Question

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-15 23:21:43 UTC
From: "Ed G." <Spectrumhog@_REMOVE_StarBand.net>
Message-ID: <Xns928AA6B4CB8E9Frog207Junocom@148.78.248.76>
Source record: 39430

I'd have some concerns, considering the age of that battery. 5 1/2 years is a long time sitting in storage. Also, a fully charged NiCd will come right off the charger showing about 1.4 volts per cell. If that is a 5 cell unit, and you check the voltage immediatly after pulling it off charge, it should read about 7.0 volts, and will slowly fall down to around 1.3 as it sits and cools. Only after a load is placed on it, or after it has sat for quite some time should it read 1.2 volts per cell. If you read 6.3 volts right after taking it off charge, then it has already lost some of its factory spec capacity. At least, that's my experience with NiCds.

I have 2 Kenwood HT's and an Azden 2 meter mobile on which some of the conductive rubber pads have worn out. Has anyone had any success at repairing those?

I know MCM Electronics sells a kit to repair those, but it is about $25.00. I don't have a problem with that if I know it would work and be more than a temporary repair.

Thanks

WB0VQP

I used that kit, did not last that long, you MUST let it dry for a
couple of days..

I have had good luck disassembling various kinds of conductive rubber keypads and washing both the pads (conductive spots on the contact side) and the PC board contact points (traces) with LAVA hand soap. Be sure to rinse thoroughly and dry completely prior to reassembly.

I would think that a mildly abrasive tooth paste would do as well.

Bill

If interested, see:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1381573182&ssPageName=ADM
E:B:LC:US:1

It has not been used in the outside elements/weather and has never been
mounted to anything. The whip antenna is in perfect condition as it has
seen little use. I bought this antenna about three years ago and used it in
the radio room (with the antenna module sitting on the floor) for one month
before putting up a dipole and buying a Kiwa MW Loop antenna. I just tested
the unit with 6 AA batteries and it works perfectly. The unit comes in the
original box and has the original manual.

Hmmm. I can't seem to bring that up on the RS web site, except in
product manuals for other items.

I do find 42-2568, which is a 3' Y-cable for $6.99.

Hi,
where were these comments when I sought a market value a week back? The only response I got was a fellow in the US who indicated a value of US$3750. Given I had heard of these selling for up to US$5k I took that as market then dropped a little off.

So what do you reckon is a realistic market value?

>product manuals for other items.

42-2448 is in my year 2001 RS catalog, page 119, under headphone accessories.
1/4" stereo male plug, 3' cord, two 1/4" stereo female jacks, $5.99

They probably also sell the plugs and jacks -- wouldn't take 5 minutes to wire
up.

The *only* store in Chicago is
Amateur Radio Toy Store, in Wheaton
Roberto is the fellow there.
He is at 630-668-5688 / 9577

No, I am not affiliated with them, just buy from them from time to time.

Not having looked at an AES catalog in a while, they "used to" have the addresses of most if not all of their suppliers listed in the back of the catalog. So, having not seen one in a while, not sure if they still do it or not!

Lou/Tech@DP.NET

That is very true, but I personally would expect it to be the date.
BTW, the code 9711 would most likely adhere to the year and week of the
year that the battery was manufactured, which is general practice amonst
many makers. Thus, his battery would likely be made in the 11th week of
1997, making the month March.

I will not take sides in this dispute except to say when a seller says "actual shipping" he should also say that he is a bazillion miles from the UPS counter and uses MailBoxes or a similar service. Without that, there is no meeting of the minds and no contract, IMHO.

What if the seller is on the North Slope and it costs $250 by float plane to get the thing to the Anchorage UPS counter? Is the buyer supposed to pay that too? I think not.

Hello Everyone,

I recently bought a Kenwood TM201B but didn't get any manual with it. Is
there someone with the same rig who can help me regarding the controls like:
setting repeater offset
setting and recalling memory
etc.

Thanks in advance.

73,

Chetan KG6NFG

3465. substituting new toroids for noise gate circuit?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-17 10:20:24 UTC
From: AJ Sanderson <ajsand@nospam.com>
Message-ID: <am6vl6$7vm$1@nntp9.atl.mindspring.net>
Source record: 39476
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,sci.electronics.basics

I'd like to build a noise gate circuit for my HF receiver, to be located externally between the radio and antenna, but I'm not sure how to wind the toroids. The circuit I'm going to use (unless someone can suggest a better one for HF use) is at
http://www.lwca.org/library/articles/jtreed/gate/gate1b.htm

This uses two FT50-75 toroids and I understand I need to change these to FT50-43 for hf use (1.8- 30 Mhz). For 50 ohm input/ ouptut, how would I wind the toroids using 43's?

Thanks,
AJ

3466. WTB: Swan 410 VFO or equivalent

Thanks for all those that responded. I will try the number and as you have already discovered the internet was not much help.

I guy on eham said he contacted Daiwa and received these instructions from them. I emailed him, but no response. We will keep trying. There is more to the zeroing pots on the front face. There are about 5 internal pots, perhaps for calibration as this one person indicated.

Thanks again,

73's Jon AE6GT

Martin,
I don't have info here on the 840, but Yaesu usually has a small "fuse lamp" in the receive antenna path. Look for a small lamp in the area of the rcv. front end.

***Might as well get my 2 cents worth in on the subject. A number of years back the father of a friend of my spouse passed away. He was a ham and a very heavy smoker. She asked if we could help in disposing of the equipment.

So a ham friend and myself went to the house. As we entered, the entire place reeked of cigarette smoke. The wallpaper was actually yellow from the smoke. We eventually located the radio shack and found a couple of Kenwood TS-830s. Nice radios; I had one myself. But you could not get near them they smelled so bad. Well, I took one and my friend the other and we started to clean them up at our homes, hoping to get rid of the smell. As I recall my friend said he used 10 rags to clean up the rig and it still smelled. I used about 6. I think we used basic glass cleaner both inside and outside of the cabinets, which does a nice job except you do not want to use it on the plastic windows of the frequency readouts. It tends to streak.

Despite countless hours and cleaning applications, we could not get rid of the odor entirely. Perhaps if I let the unit sit on my open porch for a week it may have aired it out, but the entire inside was literally covered with cigarette smoke residue just like the wallpaper. Got most of it but not all.

In any event, someone eventually purchased the units; probably a smoker. So if your at a hamfest outside flea market, take a whiff before you buy.

I found that a kerosene bath wit h some help from a stiff paint brush
did wonders for a few radios I came across that needed a serious
cleaning. Test it first on a parts (like bezels) that look extra
delicate.

Good luck,
Mike

Had a similar problem with my FT 757. Had to send it to Yaesu, there was a diode and possibly a coil assy? in the front end, between the RF amp and the mixer that they replaced. Been fine ever since. I think the FT 757 and FT 840 are nearly identical in this area.

I am trying to help a brand new Ham learn what is Uncle's (now an SK) callsign was for the opportunity of acquiring it as a vanity call (if not reissued) The SK's information is:

Fred W. Blechschmid
who lived at 5454 E. 96th Street
Garfield Heights, Ohio

Fred worked as a broadcast engineer at station WXEL on the graveyard shift. He was exposed to polio as a youngster and used crutches of his own design to get around.

I know we are talking fifty years ago but perhaps one of you old timers in the Cleveland area might remember him and his callsign. If you can suggest places the nephew can start digging for information that will be appreciated also.

Many thanks for any help or tips. I think this would mean a lot to this young man.

Jim -

One web page I found useful was http://www.vanityhq.com/w3hf/ . He helps people research old call signs free of charge in his spare time; he may not get back to you right away, but he does get there eventually. He helped me with a call I was looking for a while back. Real nice guy.

I have for sale a Drake R-4B receiver in very nice condition with
good condition copper. This receiver is sensitive and works well
with no modifications.
Asking $180.00 plus shipping from Zip 76001. Shipment to continental
USA only.

I also have for sale crystals for the following frequencies for the Drake
R-4
line. Each is $15.00, postage paid to continental US.

3.0 - 3.5 MHz
4.5 - 5.0 MHz
9.5 - 10.0 MHz
11.5 - 12.0 Mhz
15.0 - 15.5 Mhz
15.5 - 16.0 MHz
29.0 - 29.5 MHz
29.5 - 30.0 MHz

3490. FS: loudspeaker to match Hallicrafters

Newsgroup: rec.radio.amateur.equipment

From: Brendan Welch <brendan_welch@uml.edu>
Message-ID: <3D88960B.66034B33@uml.edu>
Source record: 39349

This is not one of the factory-originals with the "h" on it; it is a homemade one made to match the SX-43 (kid brother receiver to more well known SX-42).

Nice gray wooden enclosure measures 20" wide X 12.75" high X 12" front-to-back.

Loudspeaker is a Zenith, about 8" diam.

Included if you want is an old military transformer that matched the speaker to the SX-43, which I think was 600 ohm. (various other taps on transformer)

MAKE OFFER. I would much prefer that you pick this up in Bedford, Mass., so I do not have to ship it.

I have a very nice Yaesu FT-817 HF/VHF/UHF All Mode Transceiver for sale. It was purchased this year at Dayton, so it is 4 months old. It puts out 5 watts. It looks and works like new, but I have misplaced the shoulder strap. I have the original box, manual, packing. etc.
Price is $515. Thanks, Charlie Hugg, K5MBX

From: Andy Domonkos <capntripps@earthlink.net>
Message-ID: <3D893A09.214A036D@earthlink.net>
Source record: 39363

Apparently the current template modification procedure along with the ADMS1E software does not work to restore Mars/Cap (NOT freeband) on the VX1R. Is there another software mod to perform this or does it have to be a hardware mod by restoring the diode pack and moving/removing hardware jumpers?

Thanks.

ATD

3503. FS: HP-1715A oscilloscope with manual, for PARTS

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-19 03:03:48 UTC
From: lagagnon@fakesprint.ca
Message-ID: <3d893e7e.5653875@news.sprint.ca>
Source record: 39364

I have one Hewlett Packard HP-1715A 200 MHz oscilloscope complete with a manual. The scope is non-working and would suit someone requiring parts for this lovely scope. The only problem appears to be with the vertical amp board and also one of the FET preamp transistors is blown on the Channel A attenuator preamp. The front panel knobs have all been scavenged. The power supply, and tube and 90% of the boards are perfectly intact and working.

The parts in this scope tend to be common to the entire HP 1715-1745 range scopes. I want only $25 USD for the scope and manual plus you pay shipping. The scope packaged would weigh about 15 kgs (33 pounds), and ground shipping from Canada to the USA would vary from between $25-$39 USD.

Email me direct if you are interested.

I have aquired a Plectron monitor reciever (the newer smaller black colored one) and luckily it is for the same frequency for our fire departments repeater frequency, but the two-tone "reeds" are not the same as ours, so that the tone alert function will go off when our specific tones go off. I am looking for the proper "reeds" for this one. Anyone have these?

(I can find out what the exact measurement of these reeds too...)

3506. ASCOM SE550 4m radio Information

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-19 06:59:03 UTC
From: Stephen Tompsett <stephen@blob.demon.co.uk>
Message-ID: <mfIHMKC3WXi9EwpC@blob.demon.co.uk>
Source record: 39366
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

A growing number of people in the UK have purchased ASCOM SE550 4m Radios from the Rugby Amateur Transmitting Society, who still have a substantial number of units available!

Some technical information, circuit diagrams and manual sections are now available on my web site:

http://www.blob.demon.co.uk/

For those not familiar with the equipment the overall specification of the unit is:

Frequency range 68-88 MHz
Channel spacing 12.5 KHz
Mode FM
Antenna BNC 50
TX Power 25W
Deviation 2.5 KHz
DC Power Nominal 13.2V (10.8-15.6V) (RX approx. 1A, TX 6.5A/25W)

The units supplied by the Rugby Amateur Transmitting Society are modified, programmed and working on 4m.

N.B. I have noticed a number of these units being resold on EBAY for considerably more than they were purchased for!

3507. Re: Cigarette Smoke: How to get rid of smell?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-19 07:42:40 UTC
From: "Dr. Grant" <drgrant@ziplink.net>
Message-ID: <hnviou4t9llmnkp3giu8iadrr5nv5qr2tu@4ax.com>
Source record: 39367

Not to mention that "smoker" radios have this habit of being more
likely to be broken. Fans get clogged, etc. Parts get covered in
the "goo"; can't be good for the parts. A good dousing of high
quality PCB cleaner on the inner boards of any smoker rig is a
must.

I've also found that enough heat and non-smoke exposure over
time will sometimes help get rid of the smell. I own a monitor that
was previously owned by a smoker for about 5 months, and when I first
acuqired it I cleaned it as best I could, and then I just left it on
continiously for about a month; and eventually the smell almost
completely went away. This may not work for a radio though, as they
tend not to get as warm inside as a monitor does.

I dunno, did you check <http://www.mods.dk/> (click Yaesu then VX-1R)?
It Says:
"In the newer verison VX-1R that is missing the diode pack, you should
be able to do a simpler MARS/CAP modification and you will retain the
Automatic Repeater Offset finction (TX range not as extensive as the
Free-Band mod) by removing the small surface mount resistor next to the
"3" jumper, you will need to also do a hard reset as described in the
owners manual."

There's also a description of some template mod freeware and a more
extensive freq mod.

Breandan,

Are these rubber cusions for the run of the mill surplus
headphones? Can you describe them a bit further?

Thanks,

Tony

Vito,

Yes, I saw the hardware link but not sure if it was current enough for recent stock of VX-1R's. I did try the software template mods but they did not work.

Don't know your defintion of best but I have had a pair of Icom T7s for over 3 years and they seem to be reasonably rugged.

I've dropped them, left them in the car overnight with temperatures of -30C and over +40C. I picked one up a couple of weeks ago and it was too hot to hold, but worked fine. I run them on AA alkalines (just got fed up with collecting battery chargers for every gadget) and the life is exellent. One was left in the car in mid summer, turned on for over two days, and was still working fine when I needed it. I have scratched them, worn off the printing on some of the buttons and somehow torn the rubber plugs for the spkr/mic socket on one. Still very happy with them.

I chose them for the AA battery pack, the BNC connector which allowed connection to various and sundry fixed and mobile antenna, and the dual band capability. An added bonus was the wide receive coverage including the aviation band.

Dave

Source record: 39251

Hi, Sometimes you can pop the cover off of the module. The older black ones use silicone sealer to mount the cover on. After you pop it off (can be a pain to do!)
get a loop or a strong magnifying glass and examine the traces. A good part of the time
the traces have cracks in them causing failure to the module.
Get a itsy bitsy low wattage soldering iron and go over the suspected traces with solder.
I HAVE done this a few times over the years and saved the cost of replacement modules. Figure it this way, it's broken now, right? What do you have to lose!!!
Good Luck to you.

Mark

He was a kindly gent who played poor golf and had a place in Pennsylvania.
Wife was named Mamie, or something like that.

His job forced him to associate with an asshole aptly named Dick.

I have one working set which goes for 800 (incuding shipping)
and one failing set(no LED display) which I used it for parts for 600.

These are high performance receiver formerly used by telecommunication
industry. Both are in rackmounted casing and description is as follow: Fully
synthesized, dual conversion superheterodyne receivers covering the range
100 khz to 29.99999 Mhz in 10hz increments. Modes are AM, CW, RTTY and SSB.
The receivers are microprocessor controlled giving user-programmable
capabilities such as scanning and memory functions

I will try to get hold of some digital photos of them upon requested.

Thanks all
wor
Singapore.

Source record: 39271

i dont think this is the correct n.g but maybe someone here can help. i am going to cross post this in a few other n.g's

i have acquired some old motorola pageboy pagers that operate on 153.110. i would like to use them as a weather alert reciever or as a 2M repeater monitor. these units have the tone reeds in them that only allow the squelch to be broken when the 2 tones are received. i took them out thinking it would make it like a regular "carrier present equals open squelch" but this did not work. has any one else tried this or can it be done? (changing the frequency is not the problem i just need to figure out the squelch system

the second question i have is on a motorola radio that radioshack used to make. catalog 19-1216 uhf business band radio. is it possible to change it to a 70cm repeater or simplex freq. i checked batlabs.com and couldnt find anything

any help would be appreciated

steve

Don't believe that's quite correct. The station on the train car was Chuck Ritchies, W4BUG. He was the ET for Ike and for Kennedy. Retired (Army) when Johnson took over the reins. (Probably couldn't stomach two Democrats in a row.)

3570. RF Effects on Remoted Transceivers

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-21 18:00:29 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <Oh2j9.141632$AY5.57955021@e3500-atl1.usenetserver.com>
Source record: 39281

Some time ago, I experienced a situation where my IC706 IIG would cut off when operated on
20 meters. I wound a 6-turn choke of the control cable that goes to the control head. That stopped the problem. I ran into this again yesterday when a fellow ham dropped by to visit me and
mentioned that his was doing the same thing. We tried choking the control cable (same radio as mine), but it did not change it. However, the one different thing was, Dan is using the Heil boom
mike. When he used the hand mike, it didn't cut off, so we did the same thing with the mike cord
on the Heil; didn't prevent the radio from cutting off on 20. Obviously, RF is getting back to the
"soft" off-on switch in some way. Has anyone else experienced this with the 706 series?

Tnx es 73

If interested, see:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1381573182&ssPageName=ADM
E:B:LC:US:1

It has not been used in the outside elements/weather and has never been
mounted to anything. The whip antenna is in perfect condition as it has
seen little use. I bought this antenna about three years ago and used it
in
the radio room (with the antenna module sitting on the floor) for one month
before putting up a dipole and buying a Kiwa MW Loop antenna. I just
tested
the unit with 6 AA batteries and it works perfectly. The unit comes in the
original box and has the original manual.

I just got my license, so I picked up a TH-215A on eBay, and as part
of the deal the seller threw in an Alinco ALM-201.

I am trying to find any info I can about it -- the Alinco website
doesn't list it, even under discontined models.

Is it a non-Ham radio? Are manuals/schematics, etc. available?
Inquiring minds want to know.

Thanks in advance!

Brian

See if it looks like any other Alinco models.

I did a Google search and the best I come up with is that it might be a discontinued japanese model. Does it resemble a domestic Alinco model? I bought an unheard of Yaseu FT-104 directly from Japan which is identical to the FT-911 1.2 GHz (same features). If it is a Japanese model it probably tunes only 144-146 without modification but should have CTCSS tone capability.

Hi Jerry
Yes I have. Most likely the problem is in the antenna ground. Try some braided straps at the antenna feedpoint.
If you were to disconnect the ground from the feedpoint of the antenna completely , you would
get some nasty RF burns from your mic. Good Luck, 73 Chris

I am having difficulty getting excited about Icom's new IC-T90A ... I mean, do we really need another 6M/2M/70CM handheld on the market?

Other manufacturers have them. Why not Icom?

But I think I'd rather have 144/220/440MHz.

Just got an ameritron 811H. Output seems a bit low at abt 500 watts max. I believe tubes and all to be in good condx, but I think I must be doing something wrong. Maybe an internal adjustment or somethiing also. Any hints would be appreciated.

tnx

3584. 3.4Ghz Solid State Power Amplifiers

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-22 11:53:54 UTC

SSPAs:
* Original frequency range: 3,475-3,493 MHz, but usable on 3,400 MHz
without modification.
* Gain at 3400 MHz: ~42dB using 4 stages.
* 1 dB compression point: >11 watts @ 9.4v.
* Saturated output: >14 watts (>20 watts may be possible, see below).
* RF connectors: Female SMA.
* DC connector: 15 pin D-type.
* DC supply: +9.4v @ 5-7A (pins 7, 8 & 15), +12v @ 25 mA (pin 12),
-12v @ 75 mA (pin 5) and 0v (pins 2, 6, 13 & 14).
* Control: mute i/p (pin 4), PSU reset o/p (pin 3) temp monitor o/p
(pin 10) and error O/P (pin 11)
* RF O/P power Monitor: upto 10v (pin 1) into hi-z and return (pin 9)
* Size, excluding connectors: 180 x 112 x 26 mm, milled box.
* Weight: 750g.
* Originally the unit was designed for digital modulation, rather than
SSB, a number of people have modified the bias arrangements (not tried at
the radio club) and increased the supply to 10v when it has been suggested
that 18-20 watts is possible. We have increased the supply voltage to 14v
on some units when over 20 watts saturated obtained, but perhaps not
recommended for a long life. The +9.4v supply should not be applied without
the -12v supply on. We also have isolators available, which perform okay at
3400 MHz. It is interesting to note that the unit tested performed better
at 3400 MHz than the intended frequencies.

The club is selling the SSPAs c/w one isolator and DC cable for £50 each
plus UK P&P (@£5)

For photographs of the units go to www.sbrs.org.uk/amps

3585. Best backwoods rig?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-22 11:57:23 UTC

For emergency use in the mountainous, remote back country, what is the optimum HF rig, hopefully backpack size? 10M for day time use only? 20M for night time use only?

What would you bring where rescue was the principal purpose, entertainment secondary?

ken
i dont know if i would bother with a ham radio if rescue was the intent
think about it your in the mountains and get bit by a snake or fall down
a cliff you want to risk you life on if someone in europe or south
america hears you and can understand you and can figure out where in the
world you are and find the right people to contact to get you help
before you die
HF backpacking could be fun but i dont think i would risk my life on it
get your self a cell phone if you worry about lack of signal get one of
those satellite phones they are pricey but the only way to get a signal
out of very remote areas
i did a 3000 plus mile road trip a couple of months ago and with the
amount of activity on 2 meters i wouldnt even suggest that for emergancy
use
good luck

There are several QRP HF rigs suitable for backpacking -- check out the AC6V web site under QRP for links. Most of these are homebrew or kit.

HOWEVER -- if your concern is emergency use, carry a cell phone and a 2 meter HT. Be certain to carry the battery case for each one that allows you to run the device off AAA cells -- and carry extra AAA batteries.

Also, invest in a handheld GPS receiver -- I use the Garmin eTrex Legend and the eTrex Camo. The GPS enables you to tell rescuers exactly where you are.

HF backpacking can be fun -- but you must set up the rig -- string antenna, plug in the key and battery, etc. With the cell phone or HT, hit the PTT and someone will answer.

Actually, I'm really excited that ICOM is bringing out one of the "small"
handhelds. I'm not thrilled about the useless 6M portion of the radio and
I'd rather see 220, but Icom needed something smaller to compete with Yaepoo
and Kenweed.

You may or may not be excited by their new rig, but I'm glad Icom is providing competition in that particular transceiver segment. Competition makes everyone better, including Yaesu & Kenwood.

Besides, some of us are Icom guys...

In PA, that was Gettysburg he was a "5" star General in the U.S. Army. He was President when the voters elected retired military officers to lead this great country. In other words, that's when the voters had there head and their ass wired together and voted for people with decent scruples.

Now back to the main topic this newsgroup was set up for, "R A D I O".

For those of you who use recomend 2 meter HT's or cell phones for
emergency use in remote, mountainous areas -- I am talking about
really remote: No line of sight to anything except sky and nearby
wilderness mountaintops and no VHF repeaters or cell towers for 50
miles.

Best suggestion so far -- and one I didn't even think of -- was a back
channel email that suggested 40M NVIS was the way to go. I am
checking it out. Sounds like just the thing -- limited to night time
-- to skip over the mountains and come down 100-200 miles away.

Oops. Apparently, in the NVIS wold, 40M is a daytime frquency. 75M
is for day and night. 160M is night. See:
http://www.qsl.net/wb5ude/nvis/index.html

If you can call it 10m gear, I have a Titan 10m mobile & Palomar 225 blue face amp to get rid of. No longer being used, so make a reasonable offer.

3609. Panasonic RF-B11 4 Sale.

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-22 22:17:40 UTC
From: "Rodger N. Bird" <rbird2@peoplepc.com>
Message-ID: <MPG.17f80b8d861c2c949896c1@trialnews.peoplepc.com>
Source record: 39171

I have a Panasonic RF-B11 4 Sale.

Panasonic RF-B11 Information:
FM/LW/MW/SW 12-Band Receiver.
9 shortwave bands.
3" Dynamic Speaker for outstanding sound.
FM Stereo with Optional Stereo Headphones.
DC-in Jack.
AC Operation with Optional AC Adaptor.
Tone Switch (high/low).
LED Tuning Indicator.
LED FM Stereo Indicator.
Stylish Design.
Band Indicators.
Stand and Hand Strap Included.
Batteries 2 x AA

The Panasonic RF-B11 is like new and in excellent condition. No modifications have been done to it.

The selling price of $45.00 includes shipping and insurance costs within the continental United States via the U.S. POSTAL Service. Payment with a

U.S. POSTAL Service MONEY ORDER is preferred.

Please email me direct if you are interested. Do not reply to this message. My email address is: rbird2@peoplepc.com

Thank you,

Rodger

3610. BayGen Freeplay 360 AM/FM Self Powered Radio 4 sale.

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-22 22:22:06 UTC

I have a BayGen Freeplay 360 AM/FM Self Powered Radio 4 sale. This is a self power
radio and will run on the following power Sources:

Internal - B-Motor textured carbon spring driving a DC generator through a transmission.

Solar - High performance thin film solar panel

External - Optional DC adapter (center pin positive) 4.5 V 150mA (minimum)

The Frequency Range is:

FM - 88 to 108 MHz

AM - 520 to 1700 KHz

For more information see the following web pages:

http://windupradio.com/freeplay3.htm

http://www.ogormans.co.uk/freeplay360.htm

http://www.productsforanywhere.com/gear/details/fp_360.html

The Freeplay 360 is in excellent condition and works fine. The selling price of $40.00 includes shipping costs within the continental United States.

Please email me direct if you are interested. Do not reply to this message. My email address is: rbird2@peoplepc.com

Thank you,

Rodger

3611. "Best of" used radio equipment sites?

Source record: 39173

Hi there,

I'm an aspiring amateur radio operator, currently studying for my technician licensure. I'm looking for websites that are frequented by ham radio operators "in the know" about used equipment.

Specifically, I'm wondering if there are any good websites that deal in used amateur radio equipment that stand above others. A Google search turns up a lot of stuff, but I'm not sure if any of the links are reputable or utilized by knowledgeable amateurs for buying and selling used equipment.

Any suggestions? I appreciate it...

Thanks,

Jackie

3613. Beware Doug Calladonato (njscanner@comcast.net)

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-23 00:51:16 UTC
From: klarrg@aol.com
Message-ID: <20020922205116.03743.00000076@mb-co.aol.com>
Source record: 39175

..Be aware that a gent by the name of Doug Calladonato (njscanner@comcast.net)is selling several early crystal-type scanners (approx. 21 of them..) and, is willfully misrepresenting the condition of these units as "collectible" and in "excellent working condition" to obtain a sale on them.He sold me two that he represented as in "excellent working order" and, that he "tested himself before sending them to me" that are both totally non-working, useless units. I am out $60 and he denies they were non-working at time of sale.Both were recived by myself in defective, improper-working condition....

Upon opening the units, they were filled with poor-quality solder (attempted) repairs and had oibviously been tampered with prior to the sale. The one unit has a squelch that will not close, and the unit wont even scan. The second one has such poor reception as to make it useless. If both units HAD been tested as seller stated, these problems would have been painfully obvious.

I have contacted this gent asking him for a refund and he ignores my efforts entirely. I am posting this to advise any potential customers of this seller to AVOID doing business with him.His actions are obviously dishonest in nature and I have adequate proof in the form oif Emails from him and, two DOA radios to prove it.

Buyers beware.Dont get SCREWED like I did. !!)<:

3614. FS: Kenwood TS-430S, Station Accessories

Newsgroup: rec.radio.amateur.equipment

I think transverters are used for increasing the working frequency not decreasing it, i.e. passing from HF to VHF. I never saw plans for passing from 10m to 20m or even 80m. The contrary would be easier as 10m is an harmonic of 20m or 80m.

At least in England, there has been kits for allowing 2 m multimodes
(such as FT-290) access to the HF bands using a transverter.

>The contrary would be easier as 10m is an
>harmonic of 20m or 80m.

This is just a situation you try to avoid.

For instance a transmitting converter from 28 Mhz to 144 MHz often
suffers from these harmonics. Assume you want to transmit on 145.100
MHz on a repeater input and you set the HF radio to 29.100 MHz. The
5th harmonic of that is 145.500 Mhz, which falls in the middle of the
FM calling channel :-).

Thus, you have to be very careful to filter out any 5th harmonic from
the HF signal and also take care that the mixer does not generate any
larger amounts of 5th harmonics of the input frequency.

In general you should design the frequencies in such a way that no
harmonics from the low frequency signal or the local oscillator signal
fall close to the desired output frequency band, since it would be
very hard to filter them out, once they have been created.

Toko have these for I.F.'s of 6m or 2m. The difficulty of using 10m
I.F. is that of keeping mixing products out of the TX output. For
Example take IF of 28.000Mhz mixed with 31.5Mhz to give 3.5Mhz
(difference) and 59.5Mhz (sum). The Eighth harmonic of 3.5 is ?? what
?. Now work out other combinations for the n* sum +/- n*diff) etc etc.
And then do the same for all the other HF bands. Not a pretty sight.
The 2m I.F. version would be a lot easier to keep clean.

Completely right. My post was only general.

And I didn't know there was rigs transverting VHF to HF. I thought it was too hard in terms of filtering. Sorry for making confusion.

3637. Schematic of ADMS-1D Level Converter cable for Yaesu or Standard

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-23 20:47:27 UTC
From: LB <"no mail">
Message-ID: <amnuqk$7b4$1@slb3.atl.mindspring.net>
Source record: 39098

Does anyone have a schematic for the level converter cable on Yauesu or Standard radios?

It is used to program the radio's frequencies.

Thanks

3639. Flexible shaft couplers

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-23 22:01:09 UTC
From: "Edward L. Dowdy" <ellhatespamdowdy@ctscomp.com>
Message-ID: <FaMj9.562465$UU1.91864@sccrnsc03>
Source record: 39100

I am in need of a pair of flexible shaft couplers for a Kenwood TS-830. They must be insulated. Center hole is 6mm and runs through and through. Diameter is 15mm and length is 16mm. Name of part is "Universal Coupling" PN D22-0402-05. A friend said there was something about a fix in the ARRL's "Hints and Kinks". I don't know what year. Any help is greatly appreciated.

See http://www.icongrp.com/~sllewd/pcware.htm for schematics for two different versions. The four-contact 1/8" miniplugs are avalable from Mouser Electronics. You should be able to use almost any general-purpose switching transistors in this application - check your junk-box.

I built a level-shifter for a Kenwood TM-G707A programmer, rather similar to the "alternative and simplified" schematic, and it works just fine.

Be aware that the Yaesu receivers use 3-pin plugs
and the Yaesu transceivers use 4 pin plugs.

The tip of the 3-pin plug is left disconnected
when cloning Yaesu receivers. Yaesu receivers use the tip
for earphone audio and you don't want to connect that to
the level converter circuitry.

I don't know, but I have *heard* that most Yaesu rigs leave something to be
desired on AM, but
don't take that as an authoritative pronouncement. I have, however, had
excellent results with my
706s on AM.

From the FT-100 FAQ (http://www.k0lee.com/ft100faq.html):

"Most owners who have had difficulties with AM audio quality have
reported that the 6k HZ option AM filter (p/n XF117A) is an absolute
necessity for both transmitting and receiving in AM mode."

Yeah, we do, because the VX5 and VX7 fail to really impress anyone that's used them for more than 30 minutes. They're okay radios but they're a FAR cry from being what I would consider "polished". Not sure about you, but I'm used to radios that decode CTCSS properly, and don't lock up when scanning. I like a radio, that when im tinkering with it, the only things I find are "missing features" and not broken ones.

Actually, up-conversion has the advantage of fewer potential for birdies
from harmonics of the oscillators. Most of the better transceivers use
an IF higher than the Fo.

I have no experience with the 10m radio you mentioned, but it sounds
like your project has potential. Additional circuitry could be built into a
housing extension, replacing the bottom cover? The down side, It
could cost more than buying a used HF multi-band rig, but that idea
never scared any hot rodders from building. Sounds like a neat
project.

And I am not alone: I just called the two major amateur shops in the Los Angeles area, and one of them hadn't received an inquiry about the T90A until I called. They've chosen not to even order any.

The Kenwood TH-F6a - with its marvelous full-power performance on 220 /2 meters / 440 and software programmability - is the amateur HT I'm carrying around most of the time here in Southern California.

Dear Group

Normally able to fix stuff but this has me stump. Need Help !

I've got an FT 2400 Mr.

Last year audio started getting weak enough that I had to crank audio gain pot to max
Audio kept getting weaker

Touch Tone encoder is in Mic. Audio from it is loud.
Figured problem must be mic and replaced it.

Still have problem. To make problem more interesting, every so often audio comes back to normal. There's no sense of a loose connection. Taping the mic or the rig has no effect on audio and produces no sound one would associate with a loose connection.

Audio is now often less then 10% deviation.

Any Ideas or suggestion definitely welcomed

Bob

just for sh*ts and giggles make sure your mic connections are clean and shinny.

A while back I had the same problem and cleaning the connector contacts on the
rig and the mic worked for me. It did come back every few months.
You never know.
Good luck!!

GE Portables

GE MPA VHF Scan 136 - 150.8 split 192 channels nice 9.0
Condition. With battery and antenna. I have this programmed for
Ham and up to 152 MHz.
$225.00

GE MPA VHF System 146 - 170 Aegis digital encryption. Nice radio
9.0 condition. 160 channel Alphanumeric display. With antenna
and battery. Great ham or public safety radio. $300.00

GE MPD select model 470.- 488 MHz. 48 channel Alpha-Numeric display.
With battery and antenna. 7-7.5 $75.00

GE PCS UHF 440 - 470 8 channel with battery and charger. Looks
Good. $85.00

GE PCS UHF 150 - 170 8 channel with battery and charger. Looks
Good. $85.00

GE PLS VHF 16 channel. These average an 8 - 8.5 condition. 150 -170
but I have programmed these in the ham band with no trouble. These
have battery, and antenna. $75.00 each

GE MPS VHF 12 channel. 8.5 condition. New antennas and used batteries
Standard charger. $60.00 each have 2.
.
GE Monogram UHF 10 channel portables. 3 radios 2 new batteries and 1
good battery. With 1 dual slot charger. $175.00 all 3 radios.

GE Mobiles

GE Ranger 150 N9HH0A110A 150 - 170 110 watt drawer unit only.
This will work with the control heads and cables I have below.
$75.00

GE MVS UHF 440 -470 128 channels. Scans and works good.
Looks great and is programmed on the ham bands.$175.00

GE MCS UHF 440 - 470 4 channel 10 watt mobile separate speaker is
also the control head. With mic. $85.00

GE MLS Low Band 16 channel scan. 42-50 split. New mic. Should
Program to 6 meter ham. 60 watt $150.00

GE Mastr II UHF 75 watt with pre-amp. No Icoms drawer only.
MC65KKG88B $90.00 each only 2 left

GE Mastr II Lowband 42-50 slit 110 watt. MC74KCN33A
With 1 set of Icoms $30.00 each I have many.

GE Mastr Pro Low band 110 watt 42 50 split. MT74TCS33
With 2 sets of Icoms. FREE. You pay shipping and packing. I
have many.

GE Mastr exec II VHF 75-watt mobile complete with accessories. $60.00
each

GE Mastr exec II VHF Mobile extender (repeater like Pac rt) for Mastr
II or Delta. $20.00 each

GE Mastr exec II VHF Mobile extender for GE Ranger (only Exec II that
I have seen marked Ericsson) $65.00

GE S990 head 128 channel scan. Not tested. $60.00

GE S550 head 16 channel looks good but not tested. $35.00

GE S700 head and complete Motorcycle cable set for Delta or Ranger.
16 channel model has short cable and some handle bar mounts. Mic
included but no speaker.
$50.00

GE Accessories

GE Duplexer Mod DB4075 P/N 19C307166P2. tx453.xxx rx458.xxx
With cables. 4 cavity. $175.00

GE Duplexer Mod P1 P/N 19C307166P1 tx453.xxx rx458.xxx
With cables. 4cavity. $175.00

Mastr II control cable. $8.00 each

Mastr II head for mobile repeater operation. $1.00 each
Minimum 5 at this price.

Mastr II Mic. $5.00 3 for $10.00

Mastr II 8 channel tone boards. $5.00

Mastr Exec II VHF receive section. $20.00

Mastr Exec II VHF Exciter. $18.00

Mobile Repeater cable for Mastr II. $10.00

Mobile Repeater cable for Delta or Ranger. $20.00. I have seen
programming cables made from these.

GE white Versatones, 103.5, 162.2, 173.8, 179.9, 186.2, and 203.5.
$4.00 each. I have a large amount of 203.5,186.2, 179.9, 173.8, and
162.2. If you buy 10 = $3.00 each. Buy 15 =$2.50 each. Buy 50 = $1.50
each. These are the only frequencies I have.

GE Mastr II Icoms. EC = $5.00 each, 5C = $10.00 each. Picked up 3 sets of
UHF 2C Icoms $30.00 per set of 1tx and 1rx Icom.

GE Delta cables. These are the downloading type used with the S820 heads. And all other heads $40.00 each

Delta mounting plates. $10.00 each

Ranger mounting plate. $15.00

GE Mastr II mounting plates $15.00 each

Power plugs for S500, S550, C500 etc heads. Good pulls $5.00

GE S-550 / 500 and others mounting brackets. $5.00 each

GE PCS Universal charger. With wall transformer $20.00 each

GE MPI desk charger with wall transformer. $10.00

GE MPI Rack charger, 8 position. 25.00

GE MPI Mobile battery charger, Rare. $20.00

GE Battery discharge analyzer. For MPA, MPD batteries. Attaches to a rapid rack charger with a DB 15 cable and uses a MPD body to attach a battery to. Has LED readout in display area of MPD body to tell discharge rate. Another rare GE goodie. $45.00

GE shoulder strap like new, attaches where belt clip is. $15.00

GE Belt clips. $10.00 each

GE Voter. Has 9 total rec. cards and 2 TX cards. With extender card and power supply / speaker. $200.00

Other Radios and Accessories

Motorola HT50 VHF 2 channel 150 - 170 belt clip holder battery and Charger. $75.00

Motorola MT1000 UHF 438 - 469. 16 channel scan. Has battery , charger,
and stubby antenna. $165.00

Motorola Maxtrac VHF 40 watt 16 channel scan. 5 pin. With Mic. $225.00

Motorola Radius / Maxtrac VHF 25 watt 16 channel scan. 16 pin port. With mic. $200.00

Uniden SPS 802TS 800 LTR portable. With charger. $75.00 Pair.

EF Johnson Challenger 5852 portables. VHF I think. With charger and batteries but the batteries are dead. Radios make squelch noise when powered up. As is $40.00 pair.

Yaesu FTH 2009 VHF portable. 6 channel. Works great on ham and public Safety band. With wall charger $85.00

Radio Shack HTX 212 2 meter Mobile. 30 memories, Scan. Works great. This was in my van before I added another MVS so I know it works. $85.00

Marconi UHF portable. 16 channel scan with NOS battery. Made by Midland. $65.00

Midland 70-336B VHF Mobile radio. 8 channel scan. with mic.$65.00

Motorola GP300 VHF 2 channel. on ham band. Has battery OK condition and charger. $150.00

Motorola GP 300 UHF 2 channel. Has good battery and rapid charger $150.00

Motorola Mitrek VHF high 110 watt drawer only. $50.00

Motorola MT500 VHF nice shape. Crystals removed but I have 1 set of crystals for each radio. Also have a working battery and charger for each. I have 4 of these. $50.00 all

Voter from IMTS phone system. 2 rec. and 2 TX cards. $40.00

Maxon Rapid Rack charger for 0510/0520 radios. Think they will work with the sp2000 as well.$35.00

Consignment section

This area is for a few friends who like those other radios you know "Motorola" They are good people and I will pass along any trades you may wish to make.

Motorola single rapid chargers for HT600, MT1000, P200. $25.00 each

Motorola HT1000 UHF Intrinsically safe Re-cased looks new. 16 channel scan with charger. $425.00

Motorola Saber II UHF 48 channel scan. With battery and antenna. 9 condition $300.00

EF Johnson Challenger UHF 80 watt trunk mount, 99 channel Alpha-Numeric head. $225.00

Want List not FS
Extra parts for GE suitcase programmers Data modules, Printers, cables, proms, Anything you have extra. I need some UHF 450 - 470 scan
MPD radios. How many do you have and what do you want for them? Johnson scorpion program cable.

Terms
All prices are plus shipping from 40201. All items are used unless noted and only have a no DOA warranty if I say it works. If I say not tested your on your own. If I think it may be bad I will not list

it. I take cash, Postal Money Orders, Paypal, and checks but I hold them for up to two weeks to clear before I ship. If you have a question E-mail me. Contact me off list at. Gundoc@i...

If you are trying to transmit AM mode through a sideband filter that will do it....

I put a 6 Khz filter in my Kenwood TS-830 when I added the AM to improve the quality
on both RX and TX. Prior to getting the AM filter, I had the SSB filters bypassed with
a relay during TX to keep from destroying the AM signal.

From: Jack Wilson <hjack@ix.netcom.com>
Message-ID: <amr6oo$6g7$1@slb1.atl.mindspring.net>
Source record: 39129

Hi,

Can anyone tell me where the back up battery is found in an Alinco mobile 2 meter rig? I have opened up the top, the bottom, and the front panels for my ALR 206T, but cannot locate the battery. I assume it is about the same size and appearance as a watch bettery. Right? I have looked through the operator's manual and the service manual for a similar rig from the Alinco web page, but can only find a reference to the fact that the battery lasts for about 5 years. Nowhere have I found an indication of where to look for it. Help!!!

just for sh*ts and giggles make sure your mic connections are clean and shinny.
A while back I had the same problem and cleaning the connector contacts on the rig and the mic worked for me. It did come back every few months.
You never know.
Good luck!!
73, Mark

W4NNG wrote:

Dear Group
Normally able to fix stuff but this has me stump. Need Help !

I've got an FT 2400 Mr.

Last year audio started getting weak enough that I had to crank audio gain pot to max
Audio kept getting weaker

Touch Tone encoder is in Mic. Audio from it is loud.
Figured problem must be mic and replaced it.

Still have problem. To make problem more interesting, every so often audio comes back to normal. There's no sense of a loose connection. Taping the mic or the rig has no effect on audio and produces no sound one would associate with a loose connection.

Audio is now often less then 10% deviation.

Any Ideas or suggestion definitely welcomed

Bob

Bought 3/18/02 to celebrate my BD. I've gotten 4 hrs OTA. *sigh* -
Prices include shipping lwr 48

Email KA3ZKE@yahoo.com with any questions or to make offer

1) FT817
(see www.yaesu.com/amateur/ft817tx.html for specs)
Small and easy to operate and REALLY gets out. I have worked Italy, GB,
numerous western US states on SSB with 5w with the MP1 below.
10+ cosmetically... Added 4 rubber feet to rig. All original packaging.
$575 OBO

2) SuperAntenna MP-1
Tunable coil for 40-10m. My only antenna with the 817. Great with Z11 tuner
below!
Using this as a base antenna, had it mounted on our porch. Something (stray
cat?) chewed up the couterpoise, so will need a new one. You get it from
SuperAntenna for ~$15: $110 OBO

3) LDG Z11 Autotuner
Cool autotuner. Works fast and matches everything. Bet it would be great use
with a dipole backpacking.
Including short coax jumper from the tuner to FT817. $150 OBO

Forgive me for asking, but why? The PTC is basically an HF modem, and the D7 has a TNC built-in for the modes it will handle. The use of these two together would be rather unusual.

That said, to get molded connectors, you'll almost certainly have to get one Kenwood cable and a 8pin DIN cable (MFJ or Mouser) and splice them.

The following items are for sale (preferably to someone who can pick them up in the Boston area):

ICOM 750 (Japanese version of the 751) with original microphone, 250hz CW filter, 6khz AM filter, manual, Service Manual, new ROM and battery, original box, excellent condition. $450.

Astron RS35M 12 Volt Supply. Excellent condition. $90.

Dentron Clipperton L Linear Amplifier with tuned input and manual. Excellent condition. $450.

ICOM 260A all mode two meter rig with manual. Very good condition. $75.

Mirage 100 W. 2 meter Amplifier with preamp. Excellent condition. $90.

Datong RF Speech processor. Excellent condition. $45.

Take everything for $1100. (Miscellaneous extras will be thrown in.) If interested, contact me by email.

3686. HTX-404 troubles

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-25 23:10:59 UTC
From: David Shalita <davidr@cnmnetwork.com>
Message-ID: <3D924250.AC2B080C@cnmnetwork.com>
Source record: 39146

Hi,

My faithful old RS HTX-404 440 HT is acting a bit erratic.

1. A Radio Shack 7 volt replacement BP is fitting quite loosely onto the HT body.
Used to fit very snug, not loose. Now, moving the BP relative to the HT case, with power on in RX mode, causes the HT to beep. Acts like voltage is dropping out and then recovering, not a solid connection.
Is there a fix to make battery power solid again?

What company rebuilds RS BP's like mine?
I have my origianl 7v RS BP which fits very tight. Need to have it rebuilt.
Can I rebuild my orginal BP which fits HT very well?

I tried chilling the case in Freezer but could not get plastic pieces to seperate. Can anyone suggest how to open the case?

2. Power output seems low both in both low and high power modes when operated from a 20AMP +12v bench supply and from 7 volt RS BP. 1 watt per my old uncalibrated Bird 43 wattmeter. I think used to make 3 watts from BP.

Is it normal for the power output to be 1 watt in high power mode, when power is either husky +12v or 7 volts from BP?

I am looking for A HAM near Van Nuys in San Fernando Valley who has a 440 mhz wattmeter so I can determine the power output of this HT.

Has anyone had good luck letting Radio Shack repair an HTX-404?

Thank you for any help.
73, W6MIK, Dave

I bought my replacement pack from E.H. Yost...you can find him in the magazines (or probably any of the other battery dealers). The original RS nicads were notoriously crummy...my new one puts out 1.8W on high power and 0.3W on low power with a full charge (7.2V @ 1400mA hour). This pack is physically a little bigger than the original but MUCH more reliable.

From: Max <ve3tmt@yahoo.ca>
Message-ID: <Ucwk9.9003$2T6.1248605@news20.bellglobal.com>
Source record: 39201

I am in the process of making my own 9.6V 1600mA battery packs for my FT817 but need a source on a small DC cable connector similar to the one on the stock battery holder. Need male & female sides, must be able to close the battery cover door when they are installed. Does anyone know of a source for this kind of set? Searched the net everywhere to no avail. Tried quick disconnect spade lugs but they are too big, can't close the cover. The plugs found on the ends of some cordless phone batteries are great, but where do I find an inline receptacle for it?

Appreciate any help,

Thanks,

Max ve3tmt@yahoo.ca (please reply direct)

Check out the FT-817 group on Yahoo groups. There was a guy that bought a
bunch of the pins and connectors (I think from Digi-key) and made up connectors
that he was selling for a buck or two some time back. If you cannot find them
you could probably post the question in the group.

I had called RT Software (they make interface software for a number of
units) and was told that nothing is available for that unit. I'm not
sure it is even capable.

The software programming usually depends on the "cloning" feature
built into many newer units, where you could program one manually,
hook up to a second one (of that model), and transfer everything. The
software makes your PC emulate another unit, and lets you modify and
create a file in your PC.

Happy trails,

Why bother? If its anything like it's sucessor, it won't have much
more than 30 or so memories. Of course, if it supports alpha tags
like the 2500 does, I guess thatd make putting those in a heck of a
lot easier.

Dear Fellow hams;
I've been lied to by this Joe Fairclough, Wb2JKJ at Radio Club of JHS 22, was sold junk that he said was fine.
I understand that he is a Non-Profit organisation and advertises on the WWW & magazines for contibutions?
http://www.wb2jkj.org/
Sells Copy-righted manuals also>>
http://hometown.aol.com/joeee1621/myhomepage/business.html
These pages are NOT FOR PROFIT accoding to TOS but he never the less uses it as such.
I think AOL should be aware of this!
I hear from the Grape Vine that he is NOT even in JHS 22 anymore but still uses that moniker & sells his ill gotten booty on Ebay as Joeee1621, probabaly other AKA's too!
Has he ever contributed to well known causes with this money he gets? Anyone know?
Does the NYC school system know of this? He uses thier name, JHS 22 Radio Club!
He gets paid as a teacher, what does he teach if anything or did he get lost in the NYC school system and able to exploit it?
If you really want to help expose this character, I suggest you e-mail AOL & the NYC school system & hold him accountable!!

3706. Kenwood TS-930 mod question

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-26 20:23:19 UTC
From: jim.bolinger@lintek.aeroflex.com
Message-ID: <8d5ec8a2.0209261223.2a6b30f5@posting.google.com>
Source record: 39216

The 930 has two jacks on the back for connecting to a phone patch, one for transmit audio and one for receive.

I would like to connect these to the sound card input of my PC for use with the various digital HF modes, plus some experiments I have in mind.

Actually, I have already tried this. The problem, however is that the audio out signal is controlled by the front panel volume control. This makes it difficult to adjust the speaker volume for a comfortable background level and still maintain the proper level for the soundcard.

Does anyone know of any modifications that would make the phone patch audio output independent of the volume control? Or perhaps some type of external audio AGC amplifier?

Jim

Source record: 39221

I have the "base unit" model. In the process of installing a switch to turn the power off and feed thru the speaker to the radio so power doesn't have to be on, I shorted out something.

Resistor R16 took the brunt. It got hot enough to smoke and the middle color stripe is gone. Would someone be so kind to check a schematic, I don't know if one is even available, or look inside theirs (I know that's a real pain in the _ _ _) to see what this value is?

It also seems to have a lot more echo now than it did before . . . as well as hiss when the front switch is in the "off" position. I'm hoping that a new R16 will cure that.

Thanks

Jim,

If you have the schematic for the 930 find the audio output line from the amp before it reaches the volume control. You will probably have to pad the level down a bit, but it will be a fixed level at that point.

Max

3711. Rohn Tower

Newsgroup: rec.radio.amateur.equipment

I have a Rohn self supporting tower for sale. What you see in
the picture is all there is. All of the sections are there
however I no longer have the nuts and bolts. (you would want to
use new ones anyway).
I also do not have the base mount pipes. They are still stuck in
the old
concrete base at my last location. They were three 4 foot
sections of 2in pipe.
Generally good shape, some slight rust. Six 8ft sections and
one 3ft one. Pick up only. $150 takes it away. Located in

3712. Who does 'Foam-in-Place' packing in Tacoma, WA area?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-27 02:24:53 UTC
From: Dave <boatanchors@hotmail.com>
Message-ID: <3d93c07f$1_2@news.meganetnews.com>

Hello all,

I have some BIG radios to get ready for shipping - DX-100's and the like.

I've heard that some 'pack and ship' places are now doing walk-in 'Foam in Place' packaging for folks, where they shoot the polyurethane goop into a plastic bag surounding the radio for maximum protection.

I've seen guys listing radios for sale with '$20 for Foam in Place packing' added to their shipping cost - seems a fair cost to me for such good packing.

Does anyone know who does this in the Pacific Northwest? Tacoma, specifically. I did a Google search but the search terms are too broad to really narrow anything down.

Any help out there?

thanks,

David Ellison WB7AWK

You might talk to a packaging supplies company that sells the raw
materials for this, and find out if any of their customers offer this
to the public. The Thomas Register (also online) would help find them.

I used to work for a small manufacturing company which had this setup
out on the loading dock.

There is also house insulation done in a similar way, maybe this would
be worth pursuing.

Thanks, Max.

I have a schematic (at least the one in the owners manual) and have
thought about doing that. I just wanted to see if anyone had already
done so and could give detailed instructions (unsolder the wire from X
and move to Z. Change resistor Q to abc ohms. That kinda stuff).

Sandpiper used to have the stuff they use to make their own antennas
available quite
cheaply.

Sandpiper is one if those businesses that could benefit from a web site.
Even just a facsimile of their print catalogue would be useful.

If you just want small amounts you will probably find your local B&Q stock it- mine does. It isn't the cheapest way to buy it but it is convenient!

If you want more just try Yellow Pages under Aluminium Stock Holders- they will usually supply in small quantities or off cuts for cash.

I had to clean many power supplies years ago when the "Foam in Place" had entered improperly sealed power supply storage bags. What a mess. This was during the Mid 80s, and the power supplies were for commercial networking chassis. I had nothing to do with the improperly sealed bag, but they took several "electronic techs" to help clean the power supples.

Be sure that the item is sealed air tight.

I've only ever found Al rod and that's only at the B&Q Warehouse stores (not the smaller ones).

If this is the stuff you're talking about, they are appallingly bad at re-stocking. I emptied out all the B&Q's in the London area about 18 months ago :-(

Well my local 'normal' B&Q does rod, tube, and strip in Al, brass, and some composite material (plus others not so interesting to hams). The local radio club did 'clean them out' of the 6mm tube when a load of them built the "BRAT Hunt DF Antenna" but they did recover ;-). Poetic really, the club DF hunts always start in the local B&Q car park.

It does take some practice to get reasonably good at it, and to take
care of the equipment to get good results. A place that has their
people doing 82 different tasks at once may not be the best for this.

As the other poster mentioned, it is very important to wrap your gear
well to keep the foam out of it. It is amazing how just a couple of
drops of the foam mix can expand inside an unrestricted space.

3727. FS: Multi-Elmac Receivers

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-27 21:39:49 UTC
From: Sidevalve <Sabbatai_zvi@hotmail.com>
Message-ID: <cvj9pusivtlejkh6ib6kjsnl4mp74mf3c9@4ax.com>
Source record: 39238
Cross-posted to: rec.radio.amateur.swap,rec.radio.amateur.equipment

FOR SALE:

Multi-Elmac mobile HF tube type receivers. These are pretty hard to find.

1) PMR-7 receiver has ten tubes, double conversion superheterodyne covering
the 160, 80, 40, 20, 15, and 10 meter amateur bands, plus the standard broadcast
band. Designed primarily as an efficient communications receiver for mobile use,
it is also especially suitable, because of its small size, for (1) marine and aircraft
installations; (2) portable operation; and (3) as a fixed station or monitoring
receiver. It is not intended as a converter to accessory to another unit, but a
complete receiver, employing a separate power supply and speaker as described
in the manual. Every effort has been made to furnish the user with an extremely
stable receiver of rugged construction, compact layout, and high sensitivity.

Very collectable...requires a power supply (See below)
Unit is in good condition. All original knobs - looks to be complete.
I have not fired it up as I do not have a way to do that easily.

The external dimensions of the PMR-7 receiver, including the control knobs are:
height 4 5/8", width, 7", and depth, 11 1/2". The depth behind the panel is 9 7/8".

Available for $75.00 plus shipping

2) Model PMR-6A covers 160-10m ham bands.
Very collectable...requires a power supply (See below)
Unit is in good condition. All original knobs - looks to be complete.
I have not fired it up as I do not have a way to do that easily.
This is the matching receiver for the Elmac A54 and AF-67 transmitters.
Covers 160-10 meters on AM and CW.

Available for $50.00 plus shipping

3) Multi-Elmac 6V DC power supply - presumably will work with either
of the receivers.
Available for $30.00 or for $25.00 with either radio receiver above.

See N9BOR's site for pictures that will give you an idea of what these
radios look like if you are not familiar with them.

I have for sale an AS NEW IC-706MKIIG, MB-62, and AH-4. The 706MKIIG has
less
than 10 hours use, never mobile, and the MB-62 mobile mounting bracket and
the AH-4 antenna tuner are new in the box, never used. Asking $950 for the
package. I will split up the gear as follows: $755 for the 706MKIIG; $15 for
the MB-62,
and $240 for the AH-4. Thanks, Charlie Hugg, K5MBX

3731. Request for Icom AT150 help

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-28 01:02:12 UTC
From: fsholz@nc.rr.com
Message-ID: <fsholz-8D3B3F.21054527092002@news-server.nc.rr.com>
Source record: 39242

I purchased a used Icom AT150 that came without the manual and I am trying to figure out how to operate it. I have it connected to a 737A. I have set the switches under the top acces panel for the correct antenna and have adjusted the controls to turn off the LEDs (my best guess as to what to do based on the diagram under the panel). I presume the tuner is active if I push the tune button on the front panel and the LED lights. Is that all there is to it? Should I hear relays clicking inside as it tunes? How do I know if it is working?

From the 737 manual, it appears that I shouldn't use the built-in tuner in the 737 when using the AT150. Is this correct?

All help is appreciated. Thanks.

Regards,

Paul, KD4BFN

Message-ID: <an31s90mn@enews1.newsguy.com>
Source record: 39245

That's correct. Push in the TUNE button -- disable the tuner on the rig.

Your Icom rig will send a band signal to the tuner, telling it which band you are on -- the tuner will tune -- you'll hear the motors running as it tunes. In fact, when you switch bands, it tunes then it tunes again when you transmit the first time.

Also -- open the little access door on the top -- the door you used to get to the adjustments. Note that the tuner has four antenna connectors on the back -- three coax and one for a wire. Look at the switches under the access panel -- note that you must set the switches to connect the antennas.

For example, if you have a low band dipole connected to ant jack 1 and a tri-bander to ant jack 2, you would set the switches for 1.8, 3.5, 7, and 10 Mhz to position 1 -- this will connect ant #1 when you go to 160, 80, 40, or 30 meter bands. Set the switches for 14, 21, and 28 Mhz to position 2 -- this will connect the tri-bander when you switch to 20, 15, or 10 meters.

I have an AT-150 and will be glad to make a copy of the manual -- send me an e-mail with your snail mail address -- I can get it to you late next week.

Also -- on the front panel is the TUNE button and the ANT 4 button -- do not push in the ANT 4 button -- when you do, it overrides all settings and connects ANT 4.

--

Regards,
Joe S.

3734. Henry 3K-A amplifier Tune and Load settings

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-28 02:01:56 UTC
From: Leigh Orf <orf@mailbag.com>
Message-ID: <an32ik$e6i$1@inxs.ncren.net>
Source record: 39244

Hello,

I just had a QSO with a gentleman from Costa Rica who recently acquired a Henry 3K-A amplifier without the manual. He needs to know the factory default Tune and Load settings for all of the bands (80, 75, 40, 20, 15, and 10 meters), otherwise he cannot tune the amp up. If anyone out there has this amp and knows the settings for these bands, please let me know - I'll be relaying the info to him. He's in a place where the ham radio is his only mode of communication.

Regards,

Leigh Orf KG4ULP

W6NEK HF Beacon Tracker - Windows Software

In just a few moments you can get real-time worldwide DX band conditions
using the NCDXF/IARU International Beacon Network!

With this software, you do not need to copy Beacon CW at 22 wpm (the CW
speed of the Beacon ID's).

Now you will know if a band is really open to a particular part of the
world
independant of band activity!

All this from your QTH - in real time - 24/7

Download a free demo of the software at http://www.w6nek.com

The VHF side is fine, and will transmit just fine, even full wattage on the UHF side, but is deaf, will only faintly pick things up that are very close...I know that Kenwood put out a service bulletin of some sort, but where can I find it? I tried their website already? Thanks in advance, and please email it to me...

Hello Brian

> Well my local 'normal' B&Q does rod, tube, and strip in Al, brass, and
some
> composite material (plus others not so interesting to hams).

Any chance you could point me in the area of the store I should be looking?
I've been in the hardware area, generally nearby where the screws and nuts &
bolts are.

My experience is that your average B&Q employee responds with a grunt if
you're lucky, and then if you're really lucky points you vaguely to nowhere
because they really don't know. :-(

BTW, here's one of my creations, courtesy of B&Q
http://www.g6lvb.com/dayton_demo_2002.htm made of 4mm Al rod from B&Q. 70cm
RHCP yagi, 8+8 elements, tunes to better than 1.1:1 VSWR in the satellite
portion of 70cm, under 1.4:1 across the entire band. Plans at
http://www.clarc.org/Articles/uhf.htm. I can recommend these antennas if you
have a history of antenna failure like I do.

Well in my local store (Gillingham, Kent) it is right next to the items you
list, along with Al and mesh sheets.

I found the 6mm O/D Al tube pretty good and hard enough for my needs- I was
even able to tap it sucessfully for one experiment.
There are 2 tubes- a plain finish @ £1.46 a 1m length and an anodised finish
which is more expensive.

I think it is too hard not to be an alloy- for 'quick lashups' I sometimes
us Al welding rod- that is much softer.

>

The older ones are OK but the real problem is the stock control- no concept
of ordering things that seem to be selling out but pack the floor space
with stuff that never seems to move until the next sale.
>

I'll have a look. I plan to build a 2m and 70cm handheld Yagi like the Arrow one- if I ever I get time for my own projects ;-)

Check out my download page for the 'BRAT Hunt DF antenna' - it has proved very popular and I've yet to have an adverse comment as regards its working.

Good grief...Not to be a smartass, but if he can't tune that up without presets, he is going to be in trouble. He may end up burning it up. He really should order a manual. Might try W7RF. I think he's the henry dealer now. In my 2k classic manual, there is a place for factory presets in the back, but they didn't write anything in. So my manual has no presets. He should just tune it up like a normal tube final radio. #1, he needs to know the max plate current allowed, and max grid current that is normal for that amp. But even that is not totally needed. I'd start with the load control at about 1/4 to 1/3 the way up from zero. Just add a small amount of drive, say 10-20 watts from the exciter and peak the output on a wattmeter with the "tune" control of the amp. This will in turn dip the plate current. Then rock the load control to get max output, and then repeak the tune. Then add a bit more power and repeat, then more power and repeat until he is driving with full power from the 100w radio, or what ever max power he want to drive it with. Each time he increases the drive, he will need to increase the loading a bit. Each time he increases the loading, he will need to repeak the tune, to ensure minimum plate current. P.S. The meter will need to be on "IG" to read plate current. The grid current will be read on the lower meter. You can get a very good idea on the state of tune by looking at the grid current. On my 2k classic, the max grid is 250-270 mils. I usually show a bit less than that.
My max plate current is 800 mils. His may be different, or may be about the same. I dunno...Don't know what tubes he has. If the grid current is too high, either he's under loaded, or is overdriving the amp. Most henry's with 3-500z's can take up to 120w of drive. I usually don't drive with more than 100w. So if he's driving with 100w, and the grid is too high, he needs to increase the loading a bit, and

repeak the output with the "tune" control. He will notice the grid current will be lower, and maybe a bit more power out. It's hard on the tubes to be underloaded as the grid is too high, and even worse, you can splatter. The heavier you load the amp, the cleaner the signal. Lets say he wants to drive with 70w. Don't tune the amp with only 70w drive. It's possible you may have voice peaks over 70w at times, and he could splatter. It's much better to fully load the amp with 100w drive, and then just roll the drive back to 70w. In that case, the grid current will be quite low, and he will be assured a good clean signal. As he gets to full power drive, he will get to a point where adding more loading will not increase the power any more. Repeak the "tune" and then he can write down that "load" setting for future reference. The next time, he can just preset the amp to that load setting, add some drive and peak the "tune" for max out on the wattmeter, and he's ready to go. Takes only a few seconds once you get used to it. Never tune the amp at full power, or a high plate current for more than about 20-30 seconds at a time. If the "tune" control is off and he's mistuned, he better tweak it pretty fast for max output/min plate current. As I said, he REALLY needs to get a manual. There is lots more info that can help him out in there, and he needs to know the maximums for that amp as far as currents. That amp should brown the food. It's probably good for about 3000-3200 watts INPUT, and probably 55-60% of that for output. Legal limit, no problemo. Also tell him to keep his fingers out of it unless he knows what he is doing. That amp can kill him deader than 4 week old roadkill if he sticks his fingers in the wrong place. He wouldn't even know what hit him until he spouted wings up in that big hamshack in the sky.
Maybe this will help a little...He needs a manual. That thing is no toy and being in the dark with it is a bad way to live. It's probably two 3-500's with some pretty hefty plate voltage. Just my 2k classic runs about 3200-3400 volts on hi tap. His will be probably 3800-4200 v I bet if it's what I think it is.

And make sure all of the cabinet to chassis mounting screws are in place.
I've received numerous heavy boatanchors that had damage due to missing
rear chassis to cabinet mounting screws not in place. Foam is great, but
the radio must be ready for shipping before packing.

It is amazing how badly a lot of items get packed. I take in a lot of e-bay stuff for a friend overseas. I have to repack nearly everything because of the materials being used. I see a lot of damage because wads of paper are used for packing, or the item is so heavy and the box so flimsy that the item drifts to a side and gets banged up. Some people just don't have a clue.

I feel exactly the same way. I think that *most* people don't have a clue as to how much abuse a package can suffer during shipping. UPS had (and may still have) the following packing guideline:

"Make sure that your item(s) when packed will survive a three foot drop onto concrete."

Not coincidentally, the height above ground of the floor of a UPS delivery van is about three feet. I've seen some drivers, in their haste to get unloaded and on their way again, literally kick packages off the back of their vans onto the ground.

So I continue to be amazed at the number of times I receive a heavy and delicate instrument packed in styrofoam pellets, crumpled paper, or styrofoam sheets as the only protection against damage (not to mention the problem of getting the styrofoam "crumbs" out of all of the nooks and crannies of the instrument because the shipper neglected to put it in a protective bag)!

My packing method for valuable and easily damaged items is:

1) Wrap the item in several layers of bubble wrap, paying special attention to display screens, knobs, connectors that project from the panels, etc. These may require protection with extra wrap, foam padding, or heavy cardboard.

2) Put it in a box just large enough to accommodate the wrapped item (no room to shift) and seal securely.

3) Put this box in a box large enough to allow at least 2 inches of space all the way around (at least 4 inches larger in each dimension). Use small styrofoam blocks to keep the inner box centered, then fill completely with peanuts or other padding for protection.

4) Put an extra shipping label inside and seal the box.

Although it requires a little more time (not much, actually) and an extra box, I've never had anything damaged when shipping it this way. It may not be worth doing for a $50 voltmeter, but it sure is for a $10,000 spectrum analyzer!

Foam-in-place is pretty good if done correctly, but be aware that the packing company can set the foam density to a wide range of values, making it more "squishy" or less "squishy." There is an optimal setting based on the weight of the object being supported, but the packers may not adjust as necessary. Rock-hard packing will protect from puncture

and minor crush damage (if thick enough), but does nothing to protect
against impact shock or major crushes. Conversely, packing that is too
soft will allow the item to shift as it compresses the packing, and then
it may end up resting dangerously close to the side of the packing box
with inadequate protection.

3755. Lowered Prices On 706MKIIG and accessories

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-28 18:13:27 UTC
From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <bjml9.4882$t6.461791@newsread1.prod.itd.earthlink.net>
Source record: 39066

I have for sale an AS NEW IC-706MKIIG, MB-62, and AH-4. The 706MKIIG has less than 10 hours use, never mobile, and the MB-62 mobile mounting bracket and the AH-4 antenna tuner are new in the box, never used. Asking $895 for the package, shipped in lower 48. I will split up the gear if the package does not sell as follows: $695 for the 706MKIIG; $15 for the MB-62,and $225 for the AH-4. Thanks, Charlie Hugg, K5MBX

3757. Icom T81A Display

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-28 19:40:03 UTC
From: n4mbi@earthlink.net
Message-ID: <3d960412.34277463@news.earthlink.net>
Source record: 39068

Hello Group,

For those that have an Icom T81A, I understand that that there are two backlights in the display, right and left. Is the one on the left side as visible as the light on the right. This can be seen by looking at the display at an angle. I would be interested in seeing what other T81A users are seeing, or perhaps not seeing!

TNX and 73,
Rick

Thought I had this sold, but the potential buyer never got back to me.
So.....

I have a brand new Motorola HLN3333B RICK box for sale. This unit is
brand new, in the box, with all cables, hardware and manual. Asking
$169.00 shipped Priority Mail to the 50 states only. Cashiers check
or money order only. Sorry, no PayPal. This is the unit used to
interface 2 GM300s, Maxtracs, Radius, etc mobiles to make a mini
repeater. Thanks for reading.

>as visible as the light on the right.

No. The one on the right is much more visible on mine. The one on the left is there, and on, but you can barely see the light. It shows up along the very edge of the display as opposed to the round bulb-like light on the right side.

3765. TS-930 cooling fan

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-29 04:10:07 UTC
From: Craig Johnson <cbjohns@attbi.com>
Message-ID: <z2vl9.45991$wH.4637@sccrnsc01>
Source record: 39076

I have a Kenwood TS-930 SAT transceiver. It has been a terrific radio for me over the years.

Lately the radio seems to have developed a problem. The cooling fan for the finals cycles on and off when the radio is in standby (receive) mode. I don't ever remember it doing this before, unless I was transmitting.

My service manual says the fan cycles on and off to cool the heat sink for the finals and that thermistor TH1 controls it. However, I am just curious about what would cause this behavior to suddenly start.

Any suggestions about what to look for?

Thanks.

73,
Craig, AAZZ

Several pcs of 3A/110B made by STC are in stock. This is a small directly heated triode and is rather hard to find. The valves may be used, but I have tested them myself and they are all excellent. The price is only NOK 180.- each or about $ 23.70 You can find a picture and technical data on my web site - www.demostenes.no
Just search for 3A/110B in the left hand corner.

Wal-Mart sells foam isulation in a can for $5 or so.

I used it to ship my FT-890. Find a suitable box, put a 4" pc of 2X4 in the box, put the radio in a plastic bag, place the radio in the box, shoot the foam all around it, let it cure an hour or so, close the box on top, flip it over and remove the 2X4, and send it on its way.

As we are seeing in financial, medical, media, and legal areas, the vast quantities of information available to non-specialists will mean the undercutting of elites. What will teachers do when their students come to class often understanding more about the subject being taught then they do themselves?

3780. Kenwood 2 Meter All Mode

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-29 17:20:24 UTC
From: W7KID <w7kid@arrl.net>
Message-ID: <sDGl9.452453$kp.1255497@rwcrnsc52.ops.asp.att.net>
Source record: 39091

Hello group. I currently have up on auction a Kenwood TS700SP All Mode 2 Meter. It's the Digital Model, last one they made of this series. I even have an internal tone board for it that I haven't installed yet. It will still be in the box. It comes with the mentioned tone board, original hand mic, original manual, AND I'm including a VFO700 external VFO with patch cable. The VFO looks just as good as the Rig, but I can't get a signal coming back from the VFO. Everything lights up just like it should, but no rf. Anyhow, I'm including it with the rig to the high bidder. This could be an excellent chance for someone to get into a very good All Mode CHEAP, it's only at $150. Here's the link:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1383852122&rd=1

73s Ken & Sallie
W7KID & KD7NVZ

PS. Please check my other auctions for an SP230 Filtered Speaker, and a Digital Interface that will fit the TS530 and 830 rigs.

3781. FS: Telefunken RS 31g WW2 power triode

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-29 17:58:51 UTC
From: arnoldg@c2i.net
Message-ID: <3d97402c.8197009@news1.c2i.net>
Source record: 39092

Hello,

I have one of these very nice vintage power triodes in stock. RS 31g
was made by Telefunken and have some similarities with the RS 237
which is not far from 211.
The heater on RS 31g is 10V 4.8A, anode dissipation is 65W and max
anode voltage is 1600V. The valve is NOS and in its original box. The
price is NOK 910.- or about $ 120.- You can find a picture and more
data, and you can even order it from my web site: www.demostenes.no
Just search for RS 31g.

Regards,

Arnold Goks�yr
DEMOSTENES - N6899 Balestrand, Norway
Tlf. +47 5769 1340 Fax +47 5769 1267
http://www.demostenes.no

Thousands of different valves in stock as well as
sockets,transformers,books,caps,resistors and
other components. Web site is updated every week.
You can order on-line.

3782. FA: Hallicrafters SX-100 Receiver

3784. Kenwood R-599 Schematic Wanted

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-29 19:38:59 UTC
From: Bart Rowlett <bart@wb6hqk.ampr.org>
Message-ID: <3D9756D3.FA7EF17F@wb6hqk.ampr.org>
Source record: 39095

I recently acquired a Kenwood R-599 and T-599 and am looking for
schematics. The receiver works pretty well but I need to know the
muting pins on the interconnecting cable and would like to consider
reworking the AGC for QSK operation. The transmitter
is on the blink but will probably sit on the shelve for a while.

Thanks,

bart

3786. Re: HTX-404 troubles

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-29 20:32:49 UTC
From: Lou <tech@dp.net>
Message-ID: <an7oah$d79$1@news.dp.net>
Source record: 39097

Those packs can be rebuilt. The erratic one can/should be able to - be fixed without much trouble. Your transmitter may need tuned up a bit after all the time has passed. Some HTX-202s and 404s came with similar problems OR low deviation, which had to be sent to shop to be retuned - so as not to void the "new" warranty. Shouldn't be a big deal to correct any of those problems. I've done them already a few times. I have a copy of the maintenance manuals for both rigs.

I do 2 way radio repairs and such - BUT - the last time I had needed parts for a 202 they were talking lack of parts to repair. So, I would be hesitant to repair anyone else's 202 or 404 for that reason - outside of any parts I could acquire otherwise.

3787. WTB: Manual for SG-961/U

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-29 20:54:20 UTC
From: t.kishjr@att.net
Message-ID: <8581cb05.0209291254.2534e891@posting.google.com>
Source record: 38998

I'm looking for a manual for the military SG-961/U signal generator.
It was made by LogiMetrics, their model 920-S101. Good quality copy,
or original svc/op manual, either way. Email me at the address above.

Thanks,
Tom

3788. Any ICOM dual band mobiles remote controlable?

GE Portables

GE MPA VHF Scan 136 - 150.8 split 192 channels nice 9.0
Condition. With battery and antenna. I have this programmed for
Ham and up to 152 MHz $225.00

GE MPA VHF System 146 - 170 Aegis digital encryption. Nice radio
9.0 condition. 160 channel Alphanumeric display. With antenna
and battery. Great ham or public safety radio. $300.00

GE MPD select model 470.- 488 MHz. 48 channel Alpha-Numeric display.
With battery and antenna. 7-7.5 $75.00

GE PCS UHF 440 - 470 8 channel with battery and charger. Looks
Good. $85.00

GE PCS UHF 150 - 170 8 channel with battery and charger. Looks
Good. $85.00

GE PLS VHF 16 channel. These average an 8 - 8.5 condition. 150 -170
but I have programmed these in the ham band with no trouble. These
have battery, and antenna. $75.00 each

GE MPS VHF 12 channel. 8.5 condition. New antennas and used batteries
Standard charger. $60.00 each have 2.
.
GE Monogram UHF 10 channel portables. 3 radios 2 new batteries and 1
good battery. With 1 dual slot charger. $175.00 all 3 radios.

GE Mobiles

GE Ranger 150 N9HH0A110A 150 - 170 110 watt drawer unit only.
This will work with the control heads and cables I have below.
$75.00

GE MVS UHF 440 -470 128 channels. Scans and works good.
Looks great and is programmed on the ham bands.$175.00

GE MCS UHF 440 - 470 4 channel 10 watt mobile separate speaker is
also the control head. With mic. $85.00

GE MLS Low Band 16 channel scan. 42-50 split. New mic. Should
Program to 6 meter ham. 60 watt $150.00

GE Mastr II UHF 75 watt with pre-amp. No Icoms drawer only.
MC65KKG88B $90.00 each only 1 left

GE Mastr II Lowband 42-50 slit 110 watt. MC74KCN33A
With 1 set of Icoms $25.00 each I have many.

GE Mastr Pro Low band 110 watt 42 50 split. MT74TCS33
With 2 sets of Icoms. FREE. You pay shipping and packing. I
have many.

GE Mastr exec II VHF 75-watt mobile complete with accessories. $60.00
each

GE Mastr exec II VHF Mobile extender (repeater like Pac rt) for Mastr
II or Delta. $20.00 each

GE Mastr exec II VHF Mobile extender for GE Ranger (only Exec II that
I have seen marked Ericsson) $65.00

GE S990 head 128 channel scan. Not tested. $60.00

GE S550 head 16 channel looks good but not tested. $35.00

GE S700 head and complete Motorcycle cable set for Delta or Ranger.
16 channel model has short cable and some handle bar mounts. Mic
included but no speaker.
$50.00

GE S825 Scan head. With Mic and bracket. Alpha numeric head

For Delta or Ranger. 16 channel Ranger can have 224 channels with

this head 32 channel radio can have 448 channels. This head can

control siren and PA system. You can also use this head to program

Deltas and Rangers. I have cables for this head. $175.00

GE Accessories

GE Duplexer Mod DB4075 P/N 19C307166P2. tx453.xxx rx458.xxx
With cables. 4 cavity. $175.00

GE Duplexer Mod P1 P/N 19C307166P1 tx453.xxx rx458.xxx
With cables. 4cavity. $175.00

Mastr II control cable. $8.00 each

Mastr II head for mobile repeater operation. $1.00 each
Minimum 5 at this price.

Mastr II Mic. $5.00 3 for $10.00

Mastr II 8 channel tone boards. $5.00

Mastr Exec II VHF receive section. $20.00

Mastr Exec II VHF Exciter. $18.00

Mobile Repeater cable for Mastr II. $10.00

Mobile Repeater cable for Delta or Ranger. $20.00. I have seen programming cables made from these.

GE white Versatones, 103.5, 162.2, 173.8, 179.9, 186.2, and 203.5. $4.00 each. I have a large amount of 203.5,186.2, 179.9, 173.8, and 162.2. If you buy 10 = $3.00 each. Buy 15 =$2.50 each. Buy 50 = $1.50 each. These are the only frequencies I have.

GE Mastr II Icoms. EC = $5.00 each, 5C = $10.00 each. Picked up 3 sets of
UHF 2C Icoms $30.00 per set of 1tx and 1rx Icom.

GE Delta cables. These are the downloading type used with the S820 heads. And all other heads $40.00 each

Delta mounting plates. $10.00 each

Ranger mounting plate. $15.00

GE Mastr II mounting plates $15.00 each

Power plugs for S500, S550, C500 etc heads. Good pulls $5.00

GE S-550 / 500 and others mounting brackets. $5.00 each

GE PCS Universal charger. With wall transformer $20.00 each

GE MPI desk charger with wall transformer. $10.00

GE MPI Rack charger, 8 position. 25.00

GE MPI Mobile battery charger, Rare. $20.00

GE Battery discharge analyzer. For MPA, MPD batteries. Attaches to a rapid rack charger with a DB 15 cable and uses a MPD body to attach a battery to. Has LED readout in display area of MPD body to tell discharge rate. Another rare GE goodie. $45.00

GE shoulder strap like new, attaches where belt clip is. $15.00

GE Belt clips. $10.00 each

GE Voter. Has 9 total rec. cards and 2 TX cards. With extender card and power supply / speaker. $200.00

Other Radios and Accessories

Motorola HT50 VHF 2 channel 150 - 170 belt clip holder battery and Charger. $75.00

Motorola MT1000 UHF 438 - 469. 16 channel scan. Has battery , charger,

and stubby antenna. $165.00

Motorola Maxtrac VHF 40 watt 16 channel scan. 5 pin. With Mic.
$225.00

Motorola Radius / Maxtrac VHF 25 watt 16 channel scan. 16 pin port.
With mic. $200.00

Uniden SPS 802TS 800 LTR portable. With charger. $75.00 Pair.

EF Johnson Challenger 5852 portables. VHF I think. With charger and
batteries but the batteries are dead. Radios make squelch noise when
powered up. As is $40.00 pair.

Yaesu FTH 2009 VHF portable. 6 channel. Works great on ham and
public Safety band. With wall charger $85.00

Radio Shack HTX 212 2 meter Mobile. 30 memories, Scan. Works great.
This was in my van before I added another MVS so I know it works.
$85.00

Marconi UHF portable. 16 channel scan with NOS battery. Made by
Midland. $65.00

Midland 70-336B VHF Mobile radio. 8 channel scan. with mic.$65.00

Motorola GP300 VHF 2 channel. on ham band. Has battery OK condition
and charger. $150.00

Motorola GP 300 UHF 2 channel. Has good battery and rapid charger
$150.00

Motorola Mitrek VHF high 110 watt drawer only. $50.00

Motorola MT500 VHF nice shape. Crystals removed but I have 1 set of
crystals for each radio. Also have a working battery and charger for
each. I have 4 of these. $50.00 all

Voter from IMTS phone system. 2 rec. and 2 TX cards. $40.00

Maxon Rapid Rack charger for 0510/0520 radios. Think they will work
with the sp2000 as well.$35.00

Cushman CE3 Service monitor. Has model 330 Broad band mixer / watt meter

Duplexer tester plug-in. Also has 201 scope plug-in. Some of the numeral
lamps are out but you can see the numbers with a light. Works well and makes
a good starter service monitor. $350.00

Consignment section

This area is for a few friends who like those other radios you know
"Motorola" They are good people and I will pass along any trades you
may wish to make.

Motorola single rapid chargers for HT600, MT1000, P200. $25.00 each

Motorola HT1000 UHF Intrinsically safe Re-cased looks new. 16 channel scan with charger. $425.00

Motorola Saber II UHF 48 channel scan. With battery and antenna. 9 condition $300.00

EF Johnson Challenger UHF 80 watt trunk mount, 99 channel Alpha-Numeric head. $225.00

Want List not FS
Extra parts for GE suitcase programmers Data modules, Printers, cables, proms, Anything you have extra. I need some UHF 450 - 470 scan MPD radios. How many do you have and what do you want for them? Johnson scorpion program cable. Looking for an FT90 for the wife's car.

I would like to play with a VX-150 if anyone has 1 to trade.

Terms
All prices are plus shipping from 40201. All items are used unless noted and only have a no DOA warranty if I say it works. If I say not tested your on your own. If I think it may be bad I will not list it. I take cash, Postal Money Orders, Paypal, and checks but I hold them for up to two weeks to clear before I ship. If you have a question E-mail me. Contact me off list at. Gundoc@insightbb.com

Check the auto parts stores. Looks like a standard accessory switch, like
the one I just bought recently.
Not sure of exact size of the automotive related switches but it looks close
anyhow. Maybe the autoparts store may have an address for the manufacturer
of their switches. Hope this helps.

The Logikit CMOS4 gets high marks on eHam.net and costs $125:
http://www.idiompress.com/cmos4.html

The TiCK4 chip seems to be well-liked and costs $54 complete:
http://www.embres.com/tick.htm
http://ElectronicsUSA.com/mk60.html

For non-contesting use, does the TiCK4 do the job?

3807. Using IC-735 with AT-250 Auto Tuner

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-30 16:34:22 UTC
From: Richard Jones <rjones@mail.cccd.edu>
Message-ID: <3D987D0E.52385E4D@mail.cccd.edu>
Source record: 39017
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.antenna

Hello all,

I thought I would see if anyone else has successfully interfaced the Kenwood AT-250 automatic antenna tuner with an ICOM IC-735 transceiver. I would think this is has been done and would prefer not to re-invent the wheel if I don't have to. I'm not particularly interested in the automatic band selection feature as the IC-735 and the Kenwood methods of relaying this information to the tuner are quite different.

If you've done this, I would appreciate the appropriate pin out information from the IC-735 accessory port to the AT-250 port. Many thanks in advance.

73,

Rick, KG6RJ

Thousands of different valves in stock as well as
sockets,transformers,books,caps,resistors and
other components. Web site is updated every week.
You can order on-line.

3813. Kenwood AT-300 ATU fault (and solution)

Newsgroup: rec.radio.amateur.equipment
Date: 2002-09-30 22:28:29 UTC
From: Graham G <this.is@garbage.address>
Message-ID: <3d98cf22$1_2@mk-nntp-1.news.uk.worldonline.com>
Source record: 39024
Cross-posted to: uk.radio.amateur,rec.radio.amateur.equipment

Here's a little snippet for those of you who like to squirrel away obscure cause-and-effect scenarios, especially those working in the amateur equipment repair trade.

Fault: Kenwood AT300 and TS-50S combination unreliable since bought new years ago- TS50S worked perfectly with AT-50 coax tuner, but AT300 not always 'seen' by TS50S and communications between TS50S and AT300 very unreliable. Data line driver transistors in both units changed at an early stage in the proceedings.

Cause: C38 (In AT-300), microprocessor reset pulse timing capacitor fitted as 10uF during manufacture - should be 2.2uf. Caused reset pulse to be extended to over 80ms instead of just 25ms as it is supposed to be, prevented the microprocessor from responding to commands
from the TS50S as it was being held in the reset state while the TS-50S was trying to communicate with it.

Hope this eventually helps someone, somewhere. I would have been very glad to have been able to read this here myself.

-Graham

I'll back K3EWZ's suggestion that you have accidentally blown the receiver input fuse which is a common ailment on radios like the FT747, although I don't know if your radio also has one as I don't have a diagram. If there is one, it normally looks like a little lamp/bulb. It'll be OK to short it out to verify that this is indeed the fault but you MUST replace it ASAP or risk blowing something more than a fuse bulb the next time.

Howdy all;
Just a reminder that before you donate your hard earned radio gear to any Non-Profit organisation like those in QST, Please ask for a Disclosure sheet which shows where they spend every dime of your equipment. They are suppose to provide you with it if you ask!
Or just ask "What has your group done for the Amateur Radio Community lately"
Go From there.
Remember, its just as easy to pack up to donate as it is for you to sell it to a needy ham and there are many youngsters who can use it. Why let these groups make big and I mean big money(in the ''ol pocket) on your gear.
I bet it really never goes where it it is supposed to BY LAW!
So Before you donate, THINK!
Regards,
Brian

Before you donate your vehicle to charity......

I was for five years the executive director of the Appalachia Service Project, Johnson City, TN. ASP is a faith-based organizations that works in 20-25 counties of NE TN, SW VA, S WV, E KY -- with over 14,000 volunteers each year and a staff of carpenters, ASP builds 30-40 new homes and repairs over 500 homes per year for the poorest of the poor in central Appalachia.

ASP accepts used vehicles -- they especially need used pickup trucks -- 4-wheel drive pickups are as good as gold . Most non-profits that solicit used vehicles sell them -- and most of them use a middleman who does the selling and keeps a good percent of the profits.

ASP, on the other hand, puts donated vehicles on the road and uses them.

If you are inclined to donate a vehicle, contact them via their web site, www.asphome.org -- I guarantee your old truck, van, whatever, will be put to use for years, then sold for junk after ASP puts another 100,000 miles on it.

By the way, I do not profit from this in any way -- I left the organization after a dispute with the Board of Trustees -- I am no longer affiliated with them but I support the work they do.
--

Regards,
Joe S.

Hi All

I have several semi-working and not working sets and am looking for circuit diagrams or hints on repair:

1. Matsushita base MS-0835LB FM midband 67mHz transceiver

2. Yaesu FTC2003 handheld

3. Motorola MT500 handheld

Any help or links where I might get hold of repair info or circuit diagrams for these sets will be appreciated!

Thanks!

Just a few cautions: the only problem with getting a shop to perform mods for you is they may or may not guarantee the work, since mods deviate from the manufacturer's setup. In addition, they may hesitate if the mods are somehow "illegal" according to the FCC. Also, the dollar-per-hour bench rate may make the mods a bit pricey. Still, you can ask...

Message-ID: <db35a0c.0210011403.3077a8fd@posting.google.com>
Source record: 38906

Hi,

What about the utility of some external DSP like The Kenwood DSP-100
or Timewave DSP599x... on modern RX or RTX ?
Both seems to provide excellent DSP functionalities but they are
located at the audio stage... Do you confirm ?

I'm interested in such device (as many of us to reject i.e. QRM of
nearby stations during pile-up or even during simple QSO with a weak
and distant station covered with QRN or QRM) but I suspect that all
these peripherals, installed behind the audio stage to be of a poor
utility on any modern RX/TX...,even the Kenwood DSP-100.

Practically, does it means that such peripherals will be practically
useless on a rig like the Kenwood TS-570D which provides already some
interesting filtering functions like high/low cuts (DSP slope), Beat
cancel, Noise Reduction, etc ?
NB. I prefer to not compare these peripherals to some high-ends RTX
that use DSP at the IF stage. The comparison is not valid, but well
with the TS570D which DSP functions are also located at the audio
stage.

The comments of buyers of both rig (DSP and TS570) are welcome.

When it comes to modifications (other than factory issued mwo's) it matters not if the shop is an "authorized" repair shop or not. Once mods are done, warranty goes out the window (with a few exceptions).

I worked in an Icom, Kenwood, Yaesu, etc etc etc authorized shop and it did not entail any particular training or even verification of my commercial licenses. Just a business agreement between our shop and the factory's US distributor where they agreed to give us access to parts and tech info and we agreed to receive radios on their behalf for repair.

Were there other shops as good (maybe better but I doubt it :-)) ????
Certainly! If you want a set of sweep tubes installed and neutralized on an old Yaesu FT 101, what advantage do you gain by going to an "authorized" shop???

None that I can think of.

Steve

Depending on the mods ... Kenwood service may well do them.

They did several for me, when I shipped the radio in to get
a problem with the ALC repaired. Worth a call to ask them.

(I have a similar problem doing very fine work, hands not steady
enough to do anything surface mount or real small anymore.)

From: Don Smith <desmith@innercite.com>
Message-ID: <upkq0c3cgtd1ed@corp.supernews.com>
Source record: 38914

Well it looks as though Quecan of Canada is going to try to shaft me on the Sunair GSB-900SC I purchased from them through Ebay.

I paid almost 500.00 for it plus 100.00 shipping. Upon arrival I found that there were problems in the power supply, It had a bad microphone, the power cord was missing, and that nine printed circuit boards were removed and missing.

I attempted to contact them and they avoided me for a couple of days. When they finally did I contact me I was told that it was sold AS-IS and I was stuck with it. I tried to get them to agree in either a partial or full refund or even to just send the boards. So far they have refused to try and correct the situation in any way.

While I can repair the problems in the power supply and even replace the mike cord, I do expect that the radio be complete.

Can I get any of my fellow green radio collectors to contact them and help get this resolved.

The contact person is Christiane Boplduc

Source record: 38915

Hello,

Now that I've closed my station and sold all the HF antennas, I am offering my Dentron DTR-3KA Antenna Tuner for sale/auction.

This is the biggest, most ambitious, top-of-line antenna tuner that Dentron had ever produced. Covers everything from 160-10 and has built-in AC fan-cooled dummy load, big twin blue lighted meters.

Not often seen in the marketplace, it is quite rare, and there is nothing like it anywhere. Built like a tank, and absolutely gorgeous.

Currently on ebay until 10/6/02 at:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1385615960

Thanks & 73,

Jeff Singer K2KV

I've got several RF cables that I don't need so I thought I'd see if anyone here was interested in these.
They are 50' and 100' long, made of 1/4" Andrew SuperFlex Heliax FSJ1-50A with heat shrink-sealed, high-quality male N-type connectors on each end.

The 50' long cables are brand new, never been used. The 100' long cable assemblies have been previously installed, but are still in great shape.

On the new cables, one of the connectors isn't soldered/sealed, so you can remove it to make running the cable through conduit/walls/etc easier, and then solder on the center pin and re-assemble it.

Here's a link with a picture and an attuation table:

3873. HP 5245L Counter - repair question

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-03 05:24:11 UTC
From: kc0atc@qsl.net
Message-ID: <a444e1b1.0210022124.4ab1bbf5@posting.google.com>
Source record: 38934

I recently picked up an HP 5245L counter. It is having a problem.
I already have a similar counter, probably slightly newer I think
but very similar.

The one I have works pretty good. The little "gate" light flashes
and I get reasonable readings. Every dozen readings or so the
numbers are kind of goofy, but generally it makes sense.

This new one, the "gate" light never flashes except for sometimes
when I am changing the switch settings.

I think the oscillator is working, but the gating circuit is
bad. I say that because I hooked the output of the bad one
up to the input of the good one. I set the gate on the good
unit for a large figure, then when I switch the switches on
the front of the bad one while the gate light is on on the
good one, I get a reasonable reading on the good one.
(That's a horrible description!) But if I just let it sit
there I get nothing but zeros on the bad one, while the good
one has the gate light flashing.

I sprayed some contact cleaner on the wafer switches and that
didn't seem to help much. the power switch controls the rate
of gate flashing. Resistance readings on that pot are identical
to those on the working unit, so I don't think it is the pot.

I don't have any manuals or schematics for either one. So I could
be completely wrong headed about the whole thing.

I guess I am asking for some clues as to what might be the problem.
Many of the boards are interchangeable between these two units.
The bad one has a crystal oven, the working one does not.

Any hints, clues, etc. gladly accepted.

Chris

3875. Need help ID'ing early CB HTs (and finding schematic!)

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-03 06:39:40 UTC
From: Will White <googlyelmo@earthlink.net>
Message-ID: <3D9BE670.685AAA9C@earthlink.net>
Source record: 38936

I found a pair of Sears-branded single channel 100 mW CB walkie talkies at a local thrift shop for $3 for the pair. They are in *beautiful* working shape, with black wrinkle metal case and chromed die-cast fronts, and even a snazzy little analog battery level indicator, and a very well-designed adjustable wrist strap. Not a scratch, chip, rub, dent, or spot of rust on them!

They have also an earphone jack, off course a PTT switch, and on on-off-volume pot, and run off standard 9-V batteries. They look almost new, and of sufficiently high quality they were probably marketed back in 65 to CB hobbyists/utility users rather than to kids.

Now, while they do work fairly well (crystalled for Channel 11 as I received them). They could use an alignment, and the audio section of one of them at least needs new caps, and probably the PS needs caps as well. They each transmit and receive, but with lots of noise (no squelch circuit?), and one of the pair has low audio and a good deal of distortion, as well as picking up faintly a local AM BCB station sometimes. All the info I can furnish is as follows below:

*Labelled as Sears-brand
*Says "9 Transistor" below speaker-mike on front
*Marked on back "chassis #. 787.10001"
*Also on back ""service # 787-645000"
*Has old version of Part 15 warning on back (the one that mentions antenna length and power *input* and crystal tolerance (0.005%!)
*Manufacture Date May, 1965
*stamps both on the back and inside the chassis indicate these units were made in Japan.
*most transistors are marked "Toshiba", with a couple as 2SB56, 2SA74, 2SA92

I would be grateful to anyone who can probide me with any help or guidance in identifying these walkie-talkies, expecially in determining who the manufacturer was. I would be happy to pay reseaonable costs if anyone could provide me with a schematic, from Rider or Sams or some similar source. If you can only refer me to an expert in tracingin/IDing old CBs, that alone would be a great help!

I'd like to put these back in original working condition. All advice, directions, suggestions, comments, and referrals very graciously accepted! Thanks!

3881. KENWOOD TS-711 RECEPTION PROBLEM

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-03 16:41:10 UTC
From: N1XOI@arrl.net
Message-ID: <7dc208cb.0210030841.155b5d49@posting.google.com>
Source record: 38942

Hello all,

I noticed that my TS-711 seems to decrease in sensitivity as it gets warmer. I don't have the equipment to perform a sensitivity test, but I can see signals in FM dropping several dBs after half hour or so (at least according to the S-meter). The "problem" appears to be somehow of a lesser magnitude in SSB.

Has anybody else experienced the same problem? If I have to trust my ear, it is really a sensitivity problem, as opposed to maybe just being a minor issue with the S-meter circuit.

I have read other postings mentioning a similar issue, but in that case when transmitting, with the power going to zero when the radio gets hot. In that case it seems like the problem was the fan control and fixing that or modifying the radio to have continuous fan operation solved the problem.

I believe that by design the TS-711 fan starts pretty high in temp, it usually does only when transmitting. However, I got the radio used several years ago, therefore I don't know how it could have worked originally.

I'm thinking to do a little mod to have the fan always running, (even if I keep it only receiving for a couple of hours the back of the radio gets quite warm, I guess because of the built-in power supply), but I'd like to get a "second opinion" before I do it. I just want to be sure it is not a more serious problem with the RF front-end or one of the IF amplifiers. Thanks in advance for any insight.

73, Paolo N1XOI

Yes I have one. I must have one of the first.. What a great speaker!

It is SOLID.. it has a nice thick wood case. This is no little tinny toy. I could not believe how good SSB could sound. This speaker has perfect bass for the spoken word. Real nice warm reproduction with not a trace of "Mud" It has some kind of duel cone speaker in there that is just as crisp and clean as can be but unlike some "Hifi" book shelf speakers I have tried, no tweeter..so you don't get all that annoying hiss a typical speaker gives you.

Even with broadband audio like AM/FM or shortwave broadcast it sounds better than any speaker I have used on any ham radio. I am going to get another one.

Hope they come out with a smaller one for my mobile.

It is SOLID.. it has a nice thick wood case. This is no little tinny toy. I could not believe how good SSB could sound. This speaker has perfect bass for the spoken word. Real nice warm reproduction with not a trace of "Mud" It has some kind of duel cone speaker in there that is just as crisp and clean as can be but unlike some "Hifi" book shelf speakers I have tried no tweeter..so you don't get all that annoying hiss a typical speaker gives you.

Even with broadband audio like AM/FM or shortwave broadcast it sounds better than any speaker I have used on any ham radio. I am going to get another one.

Hope they come out with a smaller one for my mobile.\

3894. K1EL K10 Keyer

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-04 04:02:33 UTC
From: "Joe S." <joe@schlatter.org>
Message-ID: <anj41d01pei@enews4.newsguy.com>
Source record: 38957

I would really like to purchase a couple of K10 keyer kits from K1EL --
but -- I find his site impossible to navigate -- the navigation bars show up
as "X'ed" out images and, try though I may, I find no place on the site
where he lists his product information or has ordering information.

Anyone know where I can by the K10 keyer chip and keyer parts? Thanks.

FOR SALE:

Two James Millen adjustable coils on ceramic forms.
Type 69045 Dimensions 2-1/8" long X 1/2" diameter.
Single hole mounting, solder terminals.
QTY 2 available for $4.00 each
http://home.cfl.rr.com/happysurfer/imag/two_james.jpg

3 turn link with two tube plate caps attached.
Ideal for homebrewing.
Bakelite swinging arm for coupler. Pivot goes to ceramic "BVL" Jack
bar
with 4
metal jack sockets, and pivot brackets that are wired to two large
plate
caps made
for tubes with 1/2" diameter plate cap. Part of a BVL tank system.
Has enameled copper wire and some very useful hardware attached.
Link coil dimensions 2-1/2" diameter. Enamelled 18 gauge copper wire.
QTY 1 only at $5.00
http://home.cfl.rr.com/happysurfer/imag/3turn_link.jpg

6 turn air wound coil - airdux style. Dimensions 3/4" long X
2" diameter. Inductance 2.2 uH.
One only - available for $3.00
http://home.cfl.rr.com/happysurfer/imag/6turn_air_wound_coil.jpg

18 turn coil. Airdux style. 1.75" long and 2" diameter. 10 TPI.
12.2 uH. Will sell for $5.00
Similar to above coil only longer. Picture available.

30 turn air core coil. Dimensions are 4" long and 2" in diameter.
Inductance is 18 uH. QTY 1 only at $6.00
http://home.cfl.rr.com/happysurfer/imag/30turn_air_core.jpg

48 turn air core coil - airdux style. Has Dimensions 7" long X 2"
diameter.
Inductance is 29 uH. QTY 1 only available for $10.00
http://home.cfl.rr.com/happysurfer/imag/48_turn_air_core.jpg

91 turn air core coil - Measures 6.5" in length and 1.5" diameter. 14
turns per inch.
65 uH inductance. Excellent with plexiglas support and four mounting
holes. QTY 1 only for $12.00
http://home.cfl.rr.com/happysurfer/imag/91turn_air_core_coil.jpg

Ceramic coil, split off-center. Has total of 20 turns with a
tap at 13 turns.
On white ceramic form - former dimensions 3" long X 1.5" diameter.
Coil length is 2". Inductance is 8.56 uH.
Qty 1 only for $3.00
http://home.cfl.rr.com/happysurfer/imag/ceramic_coil_split.jpg

Ceramic coil with approx 110 turns of green cotton covered wire.
White ceramic form has dimensions - 2" long X 1.5" diameter.
Inductance is around 330 uH. Suitable for AM band or LF applications.
Has screw terminals and solder lugs for connection.
New old stock. QTY 1 only for $4.00
http://home.cfl.rr.com/happysurfer/imag/ceramic_coil_with.jpg

Coil form, ribbed white ceramic. Dimensions are 5" long and
2" diameter.
Ribbed style with slots for wire. Designed to hold 26 turns and
would have about 20 uH. Has 4 mounting holes on each end.
Has been repaired; looks fine, hence low price.
Qty 1 only at $1.00
http://home.cfl.rr.com/happysurfer/imag/coil_form_ribbed.jpg

Coil form - odd design ribbed ceramic former with 6 terminals on
base and three nice threaded holes for mounting screws.
Dimensions are 2-1/2" tall X 1-1/8" diameter.
Inner coupling coil is 7/8" diameter with tapped coil of enamelled
wire brought out to three terminals.
Qty 1 available for $3.00
http://home.cfl.rr.com/happysurfer/imag/coil_form_odd.jpg

Multi-tapped coil. Unique design attached to a PC board with a tap
for every turn.
Airdux type air core form. Coil has a total of 32 turns and dimensions
of
4" long X
1.5" diameter. Approx 12.5 uH.
QTY 1 available for $6.00
http://home.cfl.rr.com/happysurfer/imag/Multi-tapped_coil.jpg

14 MHz plug-in tank coil with link coupling. 20m coil on 5-pin base.
Marked as model 2420. Medium size. Airdux style coil has 11 turns
and the link outside it has 3 turns. QTY 1 only for $5.00
http://home.cfl.rr.com/happysurfer/imag/plug_in_coil_with_link.jpg

More soon.

Joe,

I was able to navigate the site and purchase the K10 kit (which I
really like for portable use with my FT-817, by the way!). Which
browser are you using? Some sites don't work well with Netscape,
but work better with Internet Explorer.

Message-ID: <3D9D9677.782B29E1@tampabay.rr.com>
Source record: 38968

the problem is the cigarette lighter plug isnt giving you enough amps to power the radio in high power run the power plug direct to the battery and the problem will go away
if you cant find a access point to run the wires go down to your local CB shop or car audio install shop and have them run the wires for you the standard 706 power cord is plenty long enough to get from the battery to the dash area
good luck

Are you sure your cigarette lighter socket can supply sufficient power? Perhaps the voltage drops below what the rig can handle, so it switches off.

have my as new Signal/One MilSpec 1030 HF Transceiver up for auction. The auction is over Sunday.
Please take a look at it.This was the competitor to the Collins KWM-380 in the Mid 80s. This one has 6 Collins Mechanical Filters installed. The e-Bay item # is: Item # 1385073697
Thanks, Charlie Hugg, K5MBX

Cigarette lighter adapter is the wrong power connector for this radio.
Either drop your power pack to around 25 watts or less, or hook the
radio directly to the battery using 10 ga or larger wire.

The 706 has a 100 watt transmitter and which will draw around 20 amps on
transmit. A cigarette lighter plug should be used to supply no more
than 5-6 amps.

Howdy,

I sent my FT-530 to Yaesu in CA for repair. When it came back it would no longer receive much more than ham band frequencies.

I like to listen to aircraft at 118.3 MHz AM and the local electric power company at 850 MHz during bad weather.

Also some stuff in the 300-MHz range and UHF frequncies other than 430-450 MHz.

Has this ever happened to anyone else? I hope I can return it to the condition before I sent it in.

I'm not too happy with Yaesu.

Ditch the cigarette lighter power and run the power directly to the battery. If you plan on running much ham gear mobile you might want to make a special run of 8-10 gauge power from the battery to the passenger compartment for general high current use. What I did was to use 8 gauge cable with a circuit breaker on each wire placed right next to the battery, and terminated inside the vehicle with a Power Pole multi-connector block mounted into a side body panel under the dash.

This makes it a simple task to install/remove any/multiple pieces of radio gear regardless of their power requirements. Another great feature of the Anderson Power Poles is that once you convert all your gear to this connector, you no longer have to pay ridicules money for manufacturer's power cords, adapters, etc. Everything has a common connector (I converted all of the gear in my shack also).

3917. Program TOPHAT2

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-04 18:44:15 UTC
From: Reg Edwards <g4fgq.regp@btinternet.com>
Message-ID: <anknhu$p01$1@knossos.btinternet.com>
Source record: 38978

Program TOPHAT2.exe is an improved version of TopHat1.

Part of introductory notes -

"PERFORMANCE OF SHORT, VERTICAL, TOP-CAPACITANCE-LOADED ANTENNAS

Capacitance loading of a short vertical antenna can improve radiating efficiency better than inductance loading. Best possible improvement for a 2/3-height loading coil relative to base loading is typically 3 dB. But a large top hat can improve performance by more than 6 dB. In this program the hat is a number of horizontal radial wires or rods optionally surrounded by a wire circle.

Top-capacitance loading improves radiating efficiency in two ways -

(1) A more uniform distribution of antenna current versus height results in an increase in radiation resistance for no loss in the top-hat. Whereas the high loss resistance of a raised coil can outweigh the benefit of increased radiation resistance.

(2) A tuning coil is always necessary. But its inductance is less when a capacitance hat is fitted and if overall coil dimensions are unchanged then loss in the coil is much smaller. A more uniform current due to a top hat lessens the advantage of fitting the coil part-way up the antenna. The coil can then be combined with the Z-match network located between antenna and the transmitter as in this program."

Download program TOPHAT2 from website below.

The Pascal source code for this program can also be downloaded.

Thanx to all who offered help. Seems my power connection is the problem which is confirmed via a FAQ on the ICOM webSite. This all leads to a couple more questions;

1) Is the standard, ICOM supplied power cord adequate both in gauge and fusing for direct connection to the battery?
2) One stop online shopping for Anderson Power Pole connectors as well as additional "fusing"?

Thanx again.

Thanks for looking. I am looking for a manual, schematic or any other info on my Harris (RF Communications) RE 6001 mobile repeater. The boards inside the unit were made by Public Systems of Sunnyvale California. From the code dates on the components it looks to be made in 1977-1978 time frame. It is also currently on 153.83 Mhz. I would like to recycle the receiver and transmitter boards for another purpose.

The radio is starving for power. Try a direct power lead to the car battery. Dont forget to fuse both the positive and negative leads. Rat Shack sells #10 wire that will easily do the trick.

Most Cig lighter plugs are rated at a max of 10 amps. The 706 on FM (high power) will draw 18 amps. Almost twice the rating of your cig plug.

I just bought one and Im very impressed. The audio tone is somewhat bassier that I personally like however the DSP equalizer seems to easily cut out the lows (Yes the DSP works on FM). The ARTS system and CW Trainer are both pretty cool too.

The only thing I cant figure out is what the little running man located on the LCD does. When one briefly taps the Power button, the little bugger starts to run in place in the lower left hand corner. It doesn't appear to be in the manual.

Any guesses?

Hi Brian,

As a working professional metallurgical engineer in the USA, there are many sources of aluminum tubing available at metal warehouses in the USA. After a quick scan using google, I found that Future Metals (www.futuremetals.com/pages/branches/htm) has a UK warehouse in Hampshire. I don't know where Hampshire is relative to your QTH, but they probably have what you need. Beyond metal warehouses, try suppliers of aircraft materials or aircraft salvage yards for aluminum tubing. Metal warehouses will usually sell small amounts (i.e., a couple of meters), but the cost and cutting charge may be dear.

In the USA, suppliers ink stamp their tubing with an ASTM spec number, and in the UK they probably do the same for the appropriate British Standard. Try to get tubing of the 6061 grade in the T6 or T651 heat treatments (6061 T6 or 6061 T651 Marking) since this alloy is easy to machine, highly corrosion resistant unless it's underwater in the North Sea, easy to weld, relatively strong, and generally available.

By the way, what's B&Q? In the USA, we add another B (i.e., BBQ) and eat it as chicken, pork or beef.

Regards,

Les Kramer,

WA3SGZ

I have an American beam with a broken boom. For us on the continent it is impossible to get alu.tubing in inches. As everything else is a bit old fashioned in UK, perhaps you even still have tubes in inches so I dont need to get it from USA ???
What say, fellows ?

While tubing (and wood) is not sold in inches in the UK any more (thanks to those bloody Europeans making it illegal to use non-metric measure in EU states) it is still available, it's just labelled in the metric measure. So inch square tubing is 25mm (nom). The (nom) after the 25mm is for nominal, and allows for the difference between 25mm and one inch. It's a bit hit and miss though. I bought three lengths of inch square aluminium tube for an antenna project and found a pronounced difference in the size of one (bought from another supplier) to the other two.

Metric equivalents of imperial measures are only readily available for those things that were "standard" imperial measures, like 4" water pipe, 2"x4" wood joists etc. Unfortunately these old standards are slowly being eroded in favour of close metric ones. For most imperial measurement, the nearest metric size will usually do the job OK, the difference in size will be less than the usual tolerances accepted in hand measuring and cutting.

Not to mention the Cigar lighter plug is a terrible connector. The
I*R losses just due to the friction fit are enough to cause the
problem. No matter what the available current and voltage is at the
socket.

As an entity of the manufacturer, they could be bound as if they were the manufacturer. You should as a Ham, be able to mod at your own discretion. After all, Ham radios have been "able" to operate out of band since the beginning of time. My first rig was military surplus TCS twins that were capable of 1200 Kc to 12 Mc continuous in three bands and I was very conscientious to remain within the small slivers of Novice bands that I was allotted, all the while knowing that I had a potential AM broadcast band transmitter in my hands. Part of the joy of this great country, is the Freedom of ingenuity and discretion. It is truly sad that those who are motivated by (or with) Fear, might find that we as a people can't even be trusted with hands at the end of our own arms. Perhaps they would feel safer if we were all amputees at birth, to be taken care of by our mothers for life.

It is not likely that the tech would have bothered to disturb something he didn't have to unless he had too much time on his hands, but it may have been inadvertent due to needs of the repair, or from static confusion of the CPU. Reset by holding MR and FM buttons while turning the radio on. This will blow all your memories. If this doesn't bring your "options" back, instructions for the old FT-530 mods are documented on various web sites and requires some fine jumper pad work. I wouldn't try unless you have patience, a clean place to work, ESD, a steady hand and eye, and proper soldering and desoldering tools.

Later production units lost the ability to receive 800 MHz because the 800 front end module was dropped and firmware updated.

Source record: 38863

Hi all,

Now that I've closed my station and sold all the HF antennas, I am offering my Dentron DTR-3KA Antenna Tuner for sale/auction (auction closes tomorrow - Sunday, 10/6/02):

This is the biggest, most ambitious, top-of-line antenna tuner that Dentron had ever produced. Covers everything from 160-10 and has built-in AC fan-cooled dummy load, big twin blue lighted meters.

It is quite rare, not often seen in the marketplace, and there is nothing like it anywhere. Built like a tank, and absolutely gorgeous.

Currently on ebay until 10/6/02 at:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1385615960

Thanks & 73,

Jeff Singer K2KV

3964. Samplex power supply self-destruct

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-06 07:09:01 UTC
From: cprstn54zz@att.net
Message-ID: <3d9fe025.422206046@news-server.optonline.net>
Source record: 38875

My 6-month old Samlex RPS-1207 linear power supply appears to have fried itself while turned on but not powering anything. There is the blown rectifier smell. This is after 2 hours' total use (with no problems) powering a 4 watt QRP rig. The amps pulled by the rig were around 10% of the unit's rating.

The terminals seem to be internally shorted, as indicated by a continuity test.

Linear supplies are supposed to be easy to repair. Can someone point me in the right direction as to possible sources of the problem?

Subject: Re: FT-530 de-modded???
From: "JB" ac6tk@nospamcybertime.net

As an entity of the manufacturer, they could be bound as if they were
the manufacturer. You should as a Ham, be able to mod at your own
discretion.....

Reset by holding MR and FM buttons while turning the
radio on.

This I did.

++++++++++++

...instructions for the old FT-530 mods are documented
on various web sites and requires some fine jumper pad work.

Yes. That's how I originally "installed" the mod when I got it from the QRZ
site. It wasn't much of a job.

I will check to see if the solder mysteriously "grew back". The tech may have
been instructed to do this.

++++++++++++++++++++
Later production units lost the ability to receive 800 MHz because
the 800 front end module was dropped and firmware updated.

This is scary. They may have made a mod to thwart my original mod!

Also the radio was mistakenly sent to a two-way shop in Mississippi and was
forwarded to me by them at Yaesu's expense. HMMMM???

Thank you.

That encouraged me to look inside. First thing I noticed is that one
of the three large capacitors (4700 microfarad) in parallel on the PCB
appears to melted its blue plastic wrapper and leaked burnt oil. Does
this change your answer?

I think I found the SCR on the PCB, although I can not be sure it is
the one across the output leads. Would that kind of SCR be the
rectangular type with a flat metal back insert that protrudes above
and has a hole in it?

Could a shorted SCR cause the capacitor to fail or is it vice versa?

Probably so, sounds like Capacitor is shorted, remove and see if short goes
away, but be shure and replace or youll have hum in radio.
>
> I think I found the SCR on the PCB, although I can not be sure it is

Thats it! Circuit probably use a 723 IC for regulation, it provides voltage
to SCR in overvoltage or short condition or overcurrent to short output
shutting it down.
>
> Could a shorted SCR cause the capacitor to fail or is it vice versa?
Yes, if Cap is shorted, will cause circuit to overcurrent and cause SCR to
short output, shutting it down
Sounds like you sinply have shorted 4700uf Cap.

Personally, I like my Yaesu rigs best (I own stuff by Icom and Kenwood
too), but I confess I don't know the current models. For a 144/440 HT I
think my old FT470 is great, but I guess it's a while since they made
those. It depends if you're looking at new or used. N3KIP

3980. Kenwood TS-130S problem

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-07 00:19:26 UTC
From: had@dacomp.com
Message-ID: <iq4o9.111642$121.2426164@twister.austin.rr.com>
Source record: 38891

Have a problem with my old "trusty" TS-130S. During a qso the transmitter just shut down. Ic meter reading dropped to almost nothing and output went to a watt or two. Switched over to a Dummy Antenna with no channge. Everything else, external connections, power supply, etc. checked out okey. I found that the ALC action was reading normal with modulation. After not getting it to work I gave up for the day. When I turned it on the next day all seemed normal except that the Ic meter reading was fluctuating a bit. But the rig was putting out a normal signal. Then during another qso it went away again. I have the service manual and have some experience so I plan to go inside and check it over a bit.

What I need is some clue as to what to look for from someone with some trouble shooting experience. Any help will be very much appreciated.

Thanks,

Harvey, K5DDJ

Look at the small little RF connectors that appear in various places
around the inside of the rig, especially the ones going to the PA
board. Kenwood makes vigorous use of these in their designs, and I've
had occasions with them on my TS-130 causing what you describe. Also
check the carrier level control -- see if you've got a dirty pot.

See if it's happening on all bands or just the one you were using. It
wouldn't hurt to check the contacts on the band switch, either.

Jim

Nice and clean Kenwood TS-680-S.
This is 160 - 6 meters
Comes with the following:
manual
microphone
optional CW filter
power cord
Works very well, normally sits in my office, listening to AM broadcast!
$450 shipped
Best Regards...Frank, KG9H

From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <wDgo9.13626$OB5.1367003@newsread2.prod.itd.earthlink.net>
Source record: 38802

I have for sale a mint Kenwood TS-711A 2 Meter All Mode Transceiver. This one is as new. Used very little, not a mark on it. It runs 25 watts and has the hard to find CTCSS Tone Board installed so you can select any of the Repeater Access Tones. It also comes with the Kenwood MC-48B Mic with UP/Down Buttons and 16-Key DTMF Pad. This is a $70 option.
Standard equipment on this transceiver include: dual VFOs, Digital Display, 40 Memories, Variable RF Output from 2 to 25 Watts, IF Shift, and Build in AC Power Supply(Operation on 12 Volts is also possible). Everything works great, including the memory backup battery. I do not have the manual, but I believe these are available to download from the internet.
Price is $595 plus shipping from 79602. Thanks, Charlie Hugg, K5MBX

> of them better than the rest. Any help would be appreciated.
>
> Matthew
> KC2KEI

Matthew,

Make a list of the features you value. You already started with ...
1. dual band, 140/440.
Other features might include ...
2. maximum power: From battery; direct connection. Can I regulate
power?
3. receive range: Am I okay limited to the 2m and 70 cm frequencies or
do I want wider capabilities? Air, public safety, etc.?
4. available accessories: Computer programming software? Buillt-in TNC
for APRS? External speaker connection or combined with a speaker/mic
connection? Replacement antennas: Can I get a good "gain" antenna to
supplement the OEM? Antenna connection? SMA or BNC?
5. size and weight: Am I carrying a brick or a box of Altoids?

Your available finances are on the high end. Excellent 2m/70cm dual
banders are available for as little as $200.

3993. Programmer for Midland 70-266B Needed

Anyone have a programmer for the 70-266b portable radios that they want to part with? I know someone has to have one that they are not using..

Thanks Dan

3994. TS570D no powered in car ?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-07 16:42:27 UTC
From: lombryt@hotmail.com
Message-ID: <db35a0c.0210070842.2d7d24ed@posting.google.com>
Source record: 38804

Hi,

Trying to power my kenwood TS-570D transceiver in my car (Golf IV tdi) using the cigar-lighter connected to my car battery (maintenance free), I was surprized to see my RTX staying off line :-((

I did a similar test using a portable battery pack 12V 10A (dry battery), same result : no power, although this second one read about 12.9 V on the multimeter. I don't check for my car battery but it is a new one as the car is nearly new (2 years) and I have not the slightest electrical problem (up to now...).

Up to now I thought that I could power my RTX using the car battery, and even if the voltage was not enough to emit I could use the excess of current available and transfer its power for emission (as my car uses probably a 12V 30 or 50A ?) to power it. But that doesn't work at all... this is the complete silence in my car... Is that normal ?

So i had to buy a small 12V dry battery pack and a recharger (regulated 13.6V or a bit higher, 7A for my tests), two alligators clips and that works perfectly, at least for reception and to analyse my QRM problem.

Can someone tell me what is wrong with the two first batteries (acid and dry one) that seems dead (at first sight). I thought that my car battery, even if it was written on the pack 12V could produce in fact 13.6V or more once full charged in order to power all my car electrical devices (radio, onboard computer, etc, and could thus power my RTX. But as this last stay off, I think it produces much less than 13 V... or there is something I don't understand yet.

Can someone explain me what's the matter with this satanic battery and what voltage produce a car battery ? Is it suited to power a Kenwood TS570D via the cigar-lighter ?

Thanks for comments

Hello Bart,

I browse the news group and noted your title, I am living in Hong Kong.

I know there is a shop (Kam Fai) in Mody Road, near Nathan Road (in Tsim Sha Tsui, the tour district) will sell ham radio & AV equipment at reasonable price. Shops in Ap Liu Street (Sham Shui Po, adjacent to Golden Shopping Centre (infamous for selling software clones)) are also will sell at good price
to selected customers. Both places are very close to MTR station (Tsim Sha Tsui, Sham Shui Po).

I recommanded you take a price list and note the version (voltage, frequency bands) of the equipment, and test and then pack at your witness, DO NOT accept anything which is taken out of your sight even for a shortest while.

Hope you can read my reply in time. And hope you will enjoy the stay in Hong Kong.

Best regards,

S. H. Hung VR2FO

Nice working condition. Hard to find 6-meter all-mode portable,
with built-in whip (or SO-239 for external). Runs on 6 C Cells
(alkaline or Ni-Cad) or external source. Works well. Great for
camping or mountaintopping.

Thanks for the look.

Many cigarette lighter connectors contain a 2 or 3 amp fuse. If this is the case with yours, then that fuse will have gone as soon as you plugged the radio in.

Hi Dean, and others,
I have a few suitable feet still available, and listed in the Drake
databaseat:
http://www.zerobeat.net/drakelist/database.html
under "feet"
I may be able to get more.
they are not exact originals, but:
Same dim. as on 4-lines & TR-3/4's. Plastic, slightly soft feel, not shiny,
but "flat black". 5/8" tall, tapered 15/16" to 3/4", have hole for #10
screw, not threaded. #10 or #8 nut will press into the recessed bottom.
Metal flanged insert that fits tightly into the hole, to pass #8 screw. Use
either a #10 or #8 screw & nut, supply your own. The std #10's are not long
enough to re-use. $.50/foot, plus shipping of $1.00 for the first 4, + $.25
for ea addl 4
personal checks accepted.
73,
Al Parker, W8UT
204 River Bluffs Dr.
New Bern, NC 28560

Actually, it WAS FS. If you looked at the link, you would see that the opening bid and BIN are the same. The unit sold within minutes of being listed.

All,
do any of the Icom/Yaesu/Kenwood in-car mobile HF
rigs have rx/tx on this band? If not is there a mod for any of those
that can do this? CB is ugly but usefull in blackout areas where
there are trucks.

Thx.

His order form says the K10 keyer kit is "N/A" -- and after four days, there
has been no response to an e-mail asking when the kit will be available.

Oh, well, guess I'll wait a while longer.

You cannot power a 100W HF xcvr from the cigarette lighter plug. Only directly from the battery will work properly. Too much voltage drop. Too much current.

73,
Ed KA9EES

"Thierry" <lombryt@hotmail.com> wrote in message news:db35a0c.0210070842.2d7d24ed@posting.google.com...
: Hi,
:
: Trying to power my kenwood TS-570D transceiver in my car (Golf IV tdi)
: using the cigar-lighter connected to my car battery (maintenance
: free), I was surprized to see my RTX staying off line :-((
:
: I did a similar test using a portable battery pack 12V 10A (dry
: battery), same result : no power, although this second one read about
: 12.9 V on the multimeter. I don't check for my car battery but it is a
: new one as the car is nearly new (2 years) and I have not the
: slightest electrical problem (up to now...).
:
: Up to now I thought that I could power my RTX using the car battery,
: and even if the voltage was not enough to emit I could use the excess
: of current available and transfer its power for emission (as my car
: uses probably a 12V 30 or 50A ?) to power it. But that doesn't work at
: all... this is the complete silence in my car... Is that normal ?
:
: So i had to buy a small 12V dry battery pack and a recharger
: (regulated 13.6V or a bit higher, 7A for my tests), two alligators
: clips and that works perfectly, at least for reception and to analyse
: my QRM problem.
:
: Can someone tell me what is wrong with the two first batteries (acid
: and dry one) that seems dead (at first sight). I thought that my car
: battery, even if it was written on the pack 12V could produce in fact
: 13.6V or more once full charged in order to power all my car
: electrical devices (radio, onboard computer, etc, and could thus power
: my RTX. But as this last stay off, I think it produces much less than
: 13 V... or there is something I don't understand yet.
:
: Can someone explain me what's the matter with this satanic battery and
: what voltage produce a car battery ? Is it suited to power a Kenwood
: TS570D via the cigar-lighter ?
:
: Thanks for comments

4023. Beta testers needed for tk7, new software for ICOM IC-Q7A

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-08 15:25:20 UTC
From: "Bob Parnass, AJ9S" <usenet1@parnass.org>
Message-ID: <3da2f900$0$1454$272ea4a1@news.execpc.com>
Source record: 38833
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.scanner,alt.radio.scanner

tk7 is a new, open source software for the ICOM IC-Q7A
wide coverage walkie-talkie.

I wrote tk7 using the Tcl/Tk language
so it would work in Linux, MacOS X, BSD, UNIX, Windows (95 and later),
etc. I've used tk7 on Linux and Windows 98SE but want to confirm
that it works ok on Windows XP, Windows ME, Windows 95, and Windows 2000.

tk7 lets you:

(1) Read a memory image from the IC-Q7A walkie-talkie, from a native
tk7 file or from a Q7 file created using Goran Vlaski's
IC-Q7 Programming Utility for Windows.

(2) Display and edit settings from a memory image using a graphical
user interface, then write it back to the radio or save it
in a file.

(3) Import memory channel information from a .csv (comma-separated
file).

(4) Extract memory channel information from a memory image
and export it to a .csv (comma-separated values) file.

(5) Sort memory channels by frequencies within one or both banks.

This is an experimental version of tk7 and is
designed only for the USA version radio, though it may
work with other versions.

I need beta testers who own an IC-Q7 radio and interface cable
to test whether tk7 will read data from the radio, display
it correctly on the graphical user interface, and write data
back to the radio correctly.

You can learn about and freely download a beta test version of tk7
from my home page:

http://parnass.com

I don't warrant the software, though it will cost you nothing.
Thanks.

REALISTIC PRO-2040 SCANNER - Canadian Version
With Descriminator tap Mod, RCA type plug added to rear of unit to connect DATA SLICER which I'm also selling
Excellent scanner, I've decoded ACARS, FLEX, POCSAG paging, MDT, MOBITEX, etc with the data slicer and my PC
I will even include the software. This scanner can receive cell phone transmissions also. Original box, manual,
telescopic antenna and power adapter included. -$115.00

REALISTIC DX-390
With Mute and Beep Mod!, Manual and Power Adapter, excellent condition, NO BLOWN FETS! -$65.00

GRUNDIG YACHT BOY 400PE
With Mute and Fine Tune Mod!!!, Manual, Original box, carrying case, Wall Adapter, long-wire external antenna,
Hardly used! -$105.00

GE SUPERADIO III
High performance AM/FM reception, very clean and in excellent shape, I've dxed stations as far away as Texas!!
on this one. (I'm in Ontario, Canada) -$30.00

BELTEK 23 CHANNEL AM TRANSCEIVER
This one's an oldie, looks like a mid seventies transceiver, couldn't find anything on the web about it. It measures about
12x10x4 in an all metal cabinet, it has a 120v ac as well as connections for 12v mobile. This is a solid state transceiver
and it works. -$15.00

I'm located in SW Ontario, shipping to anywhere in North America is about 8-12 dollars for these items.

Regards.

4031. Radio Shack Amateur Radio Logbook?

4038. Updated! Free Allied SX/AX-190 receiver info file

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-09 02:13:53 UTC
From: Mark Rehorst <rehorstmark@netscape.net>
Message-ID: <5t37qusiic01dqcf9kl9qrdm04vqs10svt@4ax.com>
Source record: 38749

Updated as of 10/7/02!

You can download a ton of Allied SX/AX-190 receiver information
in a single, 2.2 MB .pdf file here:

http://home.attbi.com/~akikoi/wsb/Allied-SX-190-Info-Oct02.pdf

The file includes:
Allied Radio Shack Service Manual
Allied Radio Shack Owner's Manual
Ad from CQ magazine, May 1972
Ad from Radio Shack catalog
Review from 73 magazine
NASWA review by Ed Shaw
QST magazine modifications
CQ magazine mods, March 1973, by Bruce Mackey
Bandswitch mods by John Kolb
NASWA-FRENDX mods by Ed Shaw, May 1974
Comprehensive Technical Manual by Ed Shaw
Getting Reacquainted with the SX-190 by Ed Shaw, 4/77
Allied SX-190 Revisited, by Ed Shaw, 6/82

Thanks to Bob Bachus for converting everything to .pdf format!

If anyone has cleaner copies or additional info, I'd like to add
it to my collection. Please email.

Thanks!

MR

This is often the indication of SWR shutdown, meaning there is RF
at the RF sensing circuits on the Filter Board. Look at the relay and
cabling all after and up to your wattmeter. Another possibility is a
spur due to loose screws on the IF board. This causes the PA to
come unglued at some some frequencies way out of the Ham Bands.
I have experienced this twice because of mobile operation in the
boondocks.

4042. Help for Sony ICF PRO 80

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-09 10:50:23 UTC
From: Augusto <a.ferretti@mclink.it>
Message-ID: <ao11lekqf1@newsreader1.mclink.it>
Source record: 38753

Hello, I should repair my Sony ICF PRO80 and cannot find the diagram, do anybody else has it?

In FM mode is ok, at least in 88-108 MHz range; but SSB in HF range does not work at all, fine tune does not work and there is a constant whistle on all HF frequencies (SSB mode). I know that some capacitor may become old but with the diagram it could be easier.

Many thanks in advance

4043. ICOM 706 Mobile Power?

Newsgroup: rec.radio.amateur.equipment

OK, I've learned that a cigarette lighter connection for my mobile ICOM 706MkIIG won't make the grade...

Vehicle is a Jeep Wrangler and I'd like to keep the radio installed in such a way that it can be easily moved to house. So here's what I *think* I need to do;

1) Direct leads from both poles of battery but what gauge? 10, 8, 6 or larger?

2) Add "quick disconnects". on battery leads and stock ICOM power cable. Anderson "PowerPoles" seem like a good choice but what size? 15, 30 or higher Amp?

3) Add additional circuit protection beyond that provide by stock ICOM power cable but which leads? (+), (-) or both? Circuit breaker or fuse? What size?

Anything else?

Thanx,
Bob

Why not buy an extra power lead. Thats what I did. Ran it to the
battery (dont forget fused leads "At the battery") and then
to where your rig sits. Mine sits under the front seat and I
used velcro on the Mount to hold it to the rug. Works fine and
no need for power strips etc. My extra power cord cost like 15 bucks
at the local ham store. I can now use the rig house and truck.

It would be just as simple to use a database program now days. However, if you still want to use a book, why not photocopy a blank page if you still have a complete one or do one on computer in a like manner, take it and make enough copies to make a new book. Staple it or get it bound or get a ring binder from someplace like Staples! IF you know anyone in an office setting that does those sorts of things, may be able to get it done for free. There are lots of options available to you here.

At 8 cents a page or thereabouts, it could get pricey. The ARRL sells logbooks
in two sizes, a full-size desk version, and a smaller mini-log for portable
operation.

If you're going to roll your own and you have a computer, it might be cheaper to
just dummy up a page in MS Word and print it out.

Probably a 30 amp circuit. Check the Powerpoles at the Powerwerx web site. Wire
size recommendations are given there.

4049. Icom IC-730 questions

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-09 15:38:36 UTC
From: Al <al210@Qhamster.foxhollow.ca>
Message-ID: <n7j8qu04oqkq3bs7rjrv17hc8av8nreiqq@4ax.com>
Source record: 38761
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I recently brought out my old IC-730 and have a couple of questions,
if anyone can help.

1) The pre-amp relay is prone to failure. There is reference on
Icom's website to a factory modification. Apparently this mod puts a
small current through the contacts to keep them clean.
Can anyone provide me with details on this mod?

2) The memory operation seems strange. I have mis-placed my
operator's manual, but the service manual briefly states:

"WRITE: By pushing this button, A VFO's frequency is written into
memory, or one VFO's frequency is transferred to the other VFO."

"MEMORY: Push this switch when you wish to write a frequency into
memory, or to call a memorized frequency."

For me, using 20m as an example, pressing WRITE always puts 14098.5
into VFO, clearing whatever was in the VFO.
Pressing MEMORY just recalls 14098.5.

If anyone could describe or better still email me a scan of memory
operation from the operators manual it would be greatly appreciated.

Source record: 38760

I have for sale a mint Kenwood TS-711A 2 Meter All Mode Transceiver. This one is as new. Used very little, not a mark on it. It runs 25 watts and has the hard to find CTCSS Tone Board installed so you can select any of the Repeater Access Tones. It also comes with the Kenwood MC-48B Mic with UP/Down Buttons and 16-Key DTMF Pad. This is a $70 option. Standard equipment on this transceiver include: dual VFOs, Digital Display,40 Memories, Variable RF Output from 2 to 25 Watts, IF Shift, and Build in AC Power Supply(Operation on 12 Volts is also possible). Everything works great, including the memory backup battery. I do not have the manual, but I believe these are available to download from the internet. Price is $495 plus shipping from 79602. Thanks, Charlie Hugg, K5MBX

4051. Re: Need Manual or Info on TS711A

Message-ID: <7dc208cb.0210090815.46eb4583@posting.google.com>
Source record: 38762

No spare manual, but I can give you the (weird...) sequence:

1- Switch to Mem mode and select the memory you want to fill
2- Switch to VFO mode
3- Select the frequency you want to store
4- Press twice in rapid succession the orange "M.IN" button
5- You're done. You'll hear a short beep followed by a long one
confirming the operation.

By the way, since you are one of the few (apparently...) souls still
owning a TS711, have you have noticed the S-meter reading going down
as the radio warms up? I have mine doing this, both when receiving FM
and SSB, even though the decrease is way more noticeable in FM.
I have not been able to determine if it is just the S-meter circuit or
something more serious with the front-end sensitivity actually
decreasing. Thanks.

Gentlemen As a former Brit I still retain my love of experimenting
with
antennas and thus over the years have accumulated quite a pile of
aluminium tubing.This pile is being shipped off to the scrapyard by my
grandaughter because I have little use for it anymore.
The reason from moving away from aluminium is that I find telescopic
fishing poles to be much more available,less expensive, can be
extended to over
320 inches aside using aluminium in the boom area, Can use wire inside
or aluminium paper on the outside so the basic rod material used lasts
for ever because modification to length over experimental time does
not damage the pole itself.
P.S.
When an ice storm comes along the rod believes it has caught a fish,
it bends as all fishing rods do and the ice slides off !

>to do;
>
>1) Direct leads from both poles of battery but what gauge? 10, 8, 6 or
>larger?

I'd think that 10 gauge would be adequate. I'm using a four-wire
14-gauge cable, with the wires doubled up (for an equivalent of 11
gauge) for a TM-G707A (50 watts max output) and haven't noticed any
problems with voltage drop.

>2) Add "quick disconnects". on battery leads and stock ICOM power cable.
>Anderson "PowerPoles" seem like a good choice but what size? 15, 30 or
>higher Amp?

The 15, 30, and 45-amp connectors are all inter-pluggable... the only
physical difference is the size of the crimpable/solderable wire
socket on the contact. Use whichever size of contact fits the wires
you're using.

Consider adding or making a PowerPole "Y" near the rig... it's handy
to have an extra connector set for plugging in auxiliary equipment,
recharging an HT, etc.

>3) Add additional circuit protection beyond that provide by stock ICOM power
>cable but which leads? (+), (-) or both? Circuit breaker or fuse? What size?

Fuses on both leads, as close to the battery as practical
(*definitely* before the wires go through the firewall or anywhere
else that the insulation might be abraded or pinched by accident).
You could use either a slow-blow fuse rated a bit higher than the
rig's maximum sustained draw, or a fast-blow rated at 2x or so (in
order to make sure that you don't blow out the fuse when you initially
connect the rig and its onboard filter caps charge up).

Tune to the freq. press memo then write. Now release the memo button and
tune with the VFO to whatever, when you want to go back to the memorized
freq. it will be there in memo mode.
How many times can the word "memo" be used in a question?
I'm the 3rd owner of my 730 and it seems to have the new relay for the
preamp, but the amp itself went out so I had to use a TenTec kit preamp
inline. I couldn't find the right transistors.
If you find the relay mod for the contacts, please forward them. I'd
like to try it.
I don't know about the VFO swapping, I never really used VFO-b or split.

Hi from Italy!
I need the schematic, and, better, also the manual, of the Heathkit
HWA-5400-1 (PS+Console for HW5400 rig) in electronic format.
I must rewire it for 230V (now it is wired for 110V).
Thanks in advance, ciao and 73
Guido, ik2bcp / ab9dg

4062. FS: Mini-UHF crimp on for Proflex (15 pack) New

Hi there,
I have a new Yaesu VX-1R version A106 I assume, does anyone have the same model that has done any modifications?..ie 800 Mhz restore or transmit on FRS, my police and fire are in the 866 Mhz range and I can not monitor them as this is blocked on my radio?...It is very confusing on the net about these mods as there are keppad mods and mods with soldering involved?.
I would also like to be able to transmit on the FRS frequencies as well?
Any help would be greatly appreciated
Please e-mail me at the below address with any info
Thanks-Russ

Call sign or no, modifying an Amateur rig for
use on the CB band is illegal.

Period.

I agree that CB's are useful, so if you need
to transmit on CB, buy a CB!

Geeze! A CB costs, what, 60 or 70 dollars?

A NAL from the FCC will run quite a few more
dollars than that I can guarantee.

10-4?

I have 60 feet of Rohn 25 available in North Jersey. This is a package deal which includes:

One top section with rotor plate and guy brackets
Five regular sections
One short roof mount base with foot plates
One ground mount base plate
One house bracket
And, Three philystran guy cables with attached hardware.

This is pickup only as I no longer have a truck to transport it in.

I will take $350 for the whole package or possibly trade for something of equal value.

Message-ID: <3DA50E84.3C981077@rickfrazier.com>
Source record: 38785

I've an Icom IC-751 and have heard that the UX-14 provides an interface to this rig.
Just what functions does it allow? I'm not interested in packet or other digital modes with this rig right now, but am trying to find out if the rig can be controlled by a computer, or at least interrogated to provide mode and frequency information for logging.

Also, the IC-ex310 speech synthesizer is said to provide a verbal readout of the frequency. Does it have any other functions with this rig?

Thanks

Hey Al. Have a 730 here too. I'm the second owner, well that I know
of! I've had one relay replaced but still have on that needs to go.
Sticks every few times that I key down. Annoying!

I DID find the mod that you need. Requires 3 resistors, 1 inductor
and 1 cap. This is the page that I found it on, for reference:

http://www.angelfire.com/biz2/mts/updates.html

But here is the direct link to the file that you need:

http://www.angelfire.com/biz2/mts/images/730preamp.jpg

I printed it out just in case the anglefire site goes down! I haven't
done the modification here yet though. Don't know if I will attempt
it (with my only radio) or pay someone who does it for a living.

Hope this helps!
Michael KD5RBO

Source record: 38790

Hi,

Have owned both transceivers (two FT1000MP and PRO1 and PRO2).

I prefer the PRO2, in my opinion it has a better receiver, quieter
and more sensitive and the noise reduction works better. Note I say
opinion, as they are both top class radios and opinions may vary...

One thing - if you like a good sized radio with large knobs etc, you
might be disappointed with the PRO - it's really much smaller and it
took me a while to get used to it but now I'd not part with it. When
I have that 'need' to use a big radio I switch on my IC-775DSP - that's
also a great radio and underestimated by many - could be a great second
hand bargain...

Hope you enjoy whatever you buy,

73's de

I have a TK-280 (VHF) which does not have 2-Tone paging capability listed in the programming software menus. I believe it is running Version 2.0 of the radio firmware.

I also have a TK-380 (UHF) which DOES have the 2-Tone paging capability listed in the programming software menus (the same program above). This radio is running a pre-2.0 version of the radio firmware.

My questions are:

1. Does the TK-280 support 2-Tone paging?
2. If #1 true, where are the 2-Tone paging options on the KPG49D Software?

Thanks in advance for any help you can provide.

Thanks. That helps clear up the memory issue.
It had not occurred to me to use the 2 buttons together. I had
pressed each separately, so that only one button at a time was pressed
at a time. In retrospect, the manual descriptions are accurate.

I figured out the VFO part as well. Pressing WRITE (MEMORY not
pressed) will write the other VFO's frequency to the current VFO. It
does not swap VFO's or otherwise change the other VFO.

If I discover the relay mod, I'll let you know.

Hello,

Thanks for reading this appeal for help. I am looking for a 100hz Time
Base Generator type MM 5369 EST. In my DSI Model 5500 frequency counter
this chip has gone faulty and needs replacement.

A local source said they can get it for me but the minimum order would have
to be for 1000 !

If you know of a source where I can obtain this chip, I would appreciate
hearing from you.

Ok Ed. I prefer this explanation.
What is then the maximum power (or voltage) a cigarette-lighter could support (or what model of portable RTX, a TS-50S should be enough ?)

Voltage will be the nominal 12V (actual 13.8 or so) unless wires are
undersized.

Depends on the car, but 5A is typical, 10 is heavy duty. A 50 W mobile
rig looks for 13-15A at maximum power. A transmitter is not 100%
efficient, so you cannot just look at output power.

Standard practice is to run heavier gauge wiring direct from the
battery, with fuses on both + and - sides. I would recommend using the
standardized Anderson PowerPole connectors if you ever do PS or
emergency with other hams.

I never understood about fusing the negative lead???
If the fuse opens, won't the current just go thru the
coax shield? And maybe disintegrate traces on the
low pass filter board?
With all the transients going on in a car, I'm not sure I'd
want the ground lead open.

Hi Al,
The memory button must be in before you press the write button. The confusion comes because the radio will change to the freq. currently in memory when you press the memory button, but will change back to the VFO frequency when you press write.
For the preamp mod, go to:
http://www.angelfire.com/biz2/mts/images/730preamp.jpg

Source record: 38702

IF money is no object (and that's a big IF), I'd go with the products offered by Henry Radio. Expensive, well built. They have them in base and mobile configurations, with and without bypass relays.

I managed to buy one of their mobile amps, 2-5 watts in, 70 watts out. Unfortunately there's nothing tunable inside, and I had to send it back to Henry who reworked it from 465 to 445 MHz and replaced the UHF connectors with N connectors. I added two very large fans to it and it does seem to run as cold as the proverbial cucumber. I'm driving it with a Motorola MaxTrac which gets hot while transmitting if you just look at it. Now everything is cool. I'm getting 58 watts out of the duplexer, so the amp is probably putting out closer to 80 watts.

Most mobile amps are rated for 30% to 50% duty cycle without fans. Repeater use is 100% key-down which will eventually let the hot components upset enough to self-destruct. I'd probably recommend (notice that I'm not even obeying my own words) that you run the mobile amp at maybe half its rated output for repeater use and see how well it works. If it stays cold, increase the power somewhat.

Hope this helps.
Bob M.

Message-ID: <Qiop9.48966$842.16029@news1.fdn.com>
Source record: 38706

A Google search yielded the following url, which I think will be helpful:

http://www.eham.net/reviews/detail/2396

73 de Jim K4PYT jnipper@fdn.com

I've an Icom IC-751 and have heard that the UX-14 provides an interface
to this rig.
Just what functions does it allow? I'm not interested in packet or
other digital modes with this rig right now, but am trying to find out
if the rig can be controlled by a computer, or at least interrogated to
provide mode and frequency information for logging.

Also, the IC-ex310 speech synthesizer is said to provide a verbal
readout of the frequency. Does it have any other functions with this
rig?

Thanks

I don't know why we bother to continue arguing about this. Yes - it is legal to modify almost any radio to do almost any other frequency. Yes - it is legal to own a radio that can transmit on an arbitrary frequency without a license for the frequency in question. What is illegal is transmitting on a frequency for which you have no license or authorization OR transmitting on a frequency with a radio that was not designed and type accepted for that frequency (with or without a license).

Likewise, it is perfectly legal to use pot or other illicit drugs. What is illegal is to possess them. (It's irrelevant that you cannot use a drug without possessing it!)

There is no point arguing the issue. Don't possess illegal drugs, and don't transmit where you shouldn't without a license and a radio that is type accepted for the radio service and frequency where you are transmitting.

4098. Kenwood TR-7625 Questions

Source record: 38709

I recently received a TR-7625 that appears to work. I have the following questions about the functions.

What is the subtone button for? If it is a CTCSS tone what is it or how do you set it?

Upper right has two buttons, M and MR. MR apprears to lock tuning dial. What is M for?

Below the M and MR buttons is a button marked hi and low. High and low what?

Mode choices are M, +, S, -. What is M for?

Thanks to Kenwood tech support, they pointed out my folly. It would seem that when you have the programming software selected for trunking, the 2tone option is not available. Once you select the radio model and specify "conventional", the 2-tone menu pick becomes available.

Now, if I could only find out the cap or reed codes for the fire department two-tone alert, I'd be in good shape.

My understanding is that you fuse the negative lead to the radio to protect it and the operator (you) in the event that the ground strap from the battery to the car chassis fails, and all of the current would otherwise return through your radio without a fuse.

I have for sale a very nice condition R4-A receiver.
This is the 13 tube version and is one of the nicest
you will find.
Pictures on request.
$225.00 plus shipping from 76001

> I don't know why we bother to continue arguing about this.

It was unclear if it was misinformation or perhaps the rules had changed.

> Yes - it is legal to modify almost any radio...
> Yes - it is legal to own a radio that can transmit on an arbitrary
frequency...

> What is illegal is transmitting on a frequency for which you have
> no license or authorization...

Except in an emergency.

> Likewise, it is perfectly legal to use pot or other illicit drugs.

Interesting. Where I live (California, U.S.A.), there exist laws
that prohibit being "under the influence of a controlled substance."
There exists no exception for emergencies. :-O

> What is illegal is to possess them...

Few prohibitions in the U.S.A. against posessing 'modified' equipment.
I don't know of any federal prohibitions on posession of HF equipment.

> There is no point arguing the issue. Don't possess illegal drugs, and don't
> ... don't transmit where you shouldn't without a license...

Except in an emergency.

I knew a guy who had this happen. When starting his car,
a *lot* of current travelled on the negative lead from the
radio to the battery. Sadly, he had zip-tied the rig's supply
wires to a wiring harness, necessitating a very expensive repair.

Message-ID: <3da65743$0$1459$272ea4a1@news.execpc.com>
Source record: 38716

The following are educated guesses:

I think the M stores a frequency in a memory channel.
MR is Memory Recall which tunes the transceiver to the
frequency in the memory and ignores the tuning knobs.

Mode of M probably uses the memory register in conjuntion with
the dial to determine the different frequencies for
xmit and receive for oddball repeater splits.

Eric, the two methods are 1. Contacting the local radio shop who services your pagers, or 2. Find an old motorola brick radio, or pager, and read the numbers off the tones. You'll need to cross reference them to a frequency(hertz) chart in order to get the numbers kenwood is looking for, but it can be done. If you manage to get the QC (quickcall) numbers, hollar back, somewhere I've got the link to the cross reference chart.

Mark,

If you wish proof please peruse part 95 and part 97
of the FCC rules. I'm not going to do the research
for you. The rules are very clear about what type
of radios are to be used in various services.

We are NOT talking about receiving here, only
transmit, as I'm sure you are aware.

Why do you, as a licensed amateur, even want to
debate this? Is this arguing simply for it's own sake?

I don't have to "back up" my statement. It is true and
you know it. Why debate what we both know to be true?

I repeat: If you wish to talk on CB, then buy a CB.
Having an Amateur ticket does not give you license
to use your amateur gear on ANY frequency of your
choice.

Having an Amateur radio license gives us the privilege
of using the airwaves. It also come with the responsibility
to abide by the rules governing our service. It does not
give anyone a blank check to do whatever they please.

At any rate, I'm not going to engage in a long fruitless debate with you over this issue. If you wish to use your equipment illegally, fine. Go right ahead... Its your Amateur license at risk, not mine.

hello
unless the MkIIG is differnt from the MrkII the only cable is the CIV17 which
allows you to control the radio not to program it i emailed RT Systems asking
if they made software for the 706s and they told me that the radio isnt
capable of programming like the other radios they make software for
if you want the CIV17 type of cable check out www.hosenose.com
they sell of for like $50 i bought that one for mine MkII and it controlled
the radio fine
as for the data cable i think you have to make that one up yourself
good luck

I have had links to them on my web site for five years.
I see no proof there. Perhaps you know something I don't.

> Why do you, as a licensed amateur, even want to debate this?

I just want to know the truth. I've had a 'modified' radio for
over ten years (that has never been used to transmit 'out of band').

> I repeat: If you wish to talk on CB, then buy a CB.

I repeat: I agree.

I recently read a post where a gentlemen is using a Wavetek Sam I catv analyzer as a 4-400 Mhz spectrum analyzer at low cost. Is this possible and how does such a unit compare with regular commercial spectrum analyzers? I'd like to find out a little more about this unit... is it solid state, can it be used at 50 ohm impedance, accuracy specs, step attenuator, easily serviced, etc.... so I'd appreciate any such posts from someone using this unit as an RF analyzer.

Thanks,
AJ

This is a Kepco Model 605 and will power just about any boat anchor you throw at it. It provides:

0 to 600 Volts DC variable at up to 500 mA continuous duty and is fully electronically regulated to within .3 Volts.

It also provides minus 0 to 150 Volts bias and 6.3 Volts at 20 Amps.

DC supplies are fully metered.

This power supply is a brute and is for pickup only near Ventura, CA. It is rack mount, 10 1/2 x 19 x 17 and is heavy. The original manual is included.

$150.00

If you wire the rig directly to the battey with the negative wire and the negative lead of the battery of the car opens up , all the current for the car goes to the negative wire of the rig. Then it goes out the coax connector and unwanted things hapen.

I always wire the negative lead directly to the frame of the car with a short wir and no fuse.. This eliminates the above problem. Most of the time I use a relay for the positive voltage that activates when the inition switch for the car is turned on. I have not had any moble problems in the 30 years I have been doing it this way.

Most of the ham amps will melt down in repeater use. Find a old GE Mastr ll
. Remove the amp section. It takes about 200 miliwatts of drive to give
the rated output power. Mater of fact, junk the hamtronics stuff and just
get a whole Mastr ll unit. The moble unit is fine for most applications and
you can recrystal the thing plus buy it for less than the cost of most amps.

Motorola stuff can be done the same way.

Go here and click on the repeater builders technical info page.

The truth is in part 95.

>I've had a 'modified' radio for
> over ten years (that has never been used to transmit 'out of band').

Oh, really?

Why is it modified then?

Part 97 has no stipulation against
Amateurs modifying any type of radio
for use on the Ham bands.

Part 95 does.

Is that hard to grasp, or do you just like
to argue?

I suspect the latter.

Just playing around with a new Kenwood TH-F6A, and I find that when transmitting on high power on 440 (5w), the unit immediately shuts down and I have to remove and re-seat the battery to re-start the HT.
I suspect there may be a current limit sensor somewhere? I assume on 440, the stock antenna is lousy and may be giving high SWR. If I hold the antenna in my hand while TX, it stays on.
All other bands and power levels are ok. I tried a RH-77 on same rig, and seems to be ok at 5W on 440.
Is the stock antenna that bad, of is the battery /sensor just a bit too sensitive?

If anyone else has had this problem, let me know what the fix may have been
Thanks

Mine works FB on all bands with the stock antenna regardless of power
setting. However, it does work far better on an aftermarket antenna...

It's not going to be nearly as good as a spec analyzer. You can see spurs
and harmonic and non-harmonic distortion with a real SA,and better
accuracies. The SAM is basically a freq-tuned voltmeter.Made for 75 ohm
impedances,that's what cable is. You could use a 50-75 ohm pad,but accuracy
will suffer.
(I used to work for the company that Wavetek bought,that made the SAM
meters. Mid-State Electronics, ;-))

I'd buy one of those inexpensive SA's before I'd spend any money on a
SAM,if you want a RF analyzer.

I have a manual for this rig if you need one.
I ran into trouble with the KNWD tr-7625 here. Seems the "unlock" light came on after a power down and now I can't get it to tx/rx at all. Everything else works fine. The manual says to simply change the frequency and the pll will return to normal. This has been tried over and over. Does anyone know how to reset the pll ?

news:3DA635BF.472DE23C@qsl.net...
I recently received a TR-7625 that appears to work. I have the following questions about the functions.

What is the subtone button for? If it is a CTCSS tone what is it or how do you set it?

Upper right has two buttons, M and MR. MR apprears to lock tuning dial. What is M for?

Below the M and MR buttons is a button marked hi and low. High and low what?

Mode choices are M, +, S, -. What is M for?

Source record: 38741

James:

I've seen it, but I still have the question, which is why I asked in the first place:

Just what functions does it (the UX-14, or the Piexx version) allow (provide)?

Maybe I should ask more specifically:
Can I control the frequency and mode of the radio from the Computer?
Can I poll the radio and get signal strength information, or at least the current frequency and mode?

What software is available for the IC-751, who produces it, and what functions does it support?

I'm not adverse to spending some of my relatively small pool of "ham money" but I want to know if I'm going to get decent value for my purchase before I let go of my cash....

Thanks

have a like new Kendecom MR4 receiver with rack mount for sale. Unit is like new. I got it for my 220 repeater and then decided to buy a whole new machine. It is in near mint condition with NO air time on it. This is a 220mhz receiver. For specs and a picture use the following URL WWW.advcommsys.com/mr4rack.html

The list price is $600 but am asking a lot less.
The receiver is crystalled and aligned on 224.02 right now. Here is that up grade for your 220 repeater or the control receiver that you wanted for your 2 meter/440 repeater.

$250/OBO plus shipping.
Or trade for a VHF duplexer that will do 600khz split.

Thanks for looking

4133. Antenna MADE for AO-40!

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-12 13:27:25 UTC
From: G Rollins <address@mysite.com>
Message-ID: <hp8gquke1ufub0sfltprt89g4sg46gr9f8@4ax.com>
Source record: 38743

I got tired of straining to hear signals from AO-40 with my barbecue grill dish and developed a circular polarized antenna that WORKS! I talked a manufacturer into producing small quantities of these specialized AO-40 antennas, and I am now making this antenna available to the amateur radio community. It is an offset parabolic and there is NO aperture blockage of the incoming signal. Plus, you can connect your downconverter directly to the feed with no signal line loss. Extremely efficient, this antennas design includes many advantages over other dishes. I have current stock and most orders ship the same or next business day. The 3' N3IYR dish outperforms any other commercially available AO-40 antenna. Please visit my web site and look my antenna over. Leave me a comment if you like, or ask any questions you might have.

No you should not use it as spectrum analyzer unless you only need a very simple, low resolution and poor accuracy analyzer.
Bye.

Ok, guys. What would be examples of good, used, lower cost rf analyzers that I could look for that wouldn't break the bank. Say 500 Mhz bandwidth (150 Mhz minimal acceptable).

I wouldn't try to draw more than 2 or 3 amps from a cigarette lighter plug.
Voltage will be near the same as the battery. A TS-50 is a 100W HF rig too.
No 100W anything is going to work via this plug.

I prefer not to junk the hamtronics stuff. It is the only thing that has run w/o failure in my repeater for the last 10 years.

I had been running a motorola brick amp, but since it was for 460mhz and 5 watt drive, I never liked its operation.

So, now I am looking for a 2 watt input replacement.

I would buy the hamtronics stuff for that, but they want $200 for a 2watt to 10 watt ipa, then you have to buy the power amp for $600. I would probably never die though....

Ham and up to 152 MHz $225.00

GE MPA VHF System 146 - 170 Aegis digital encryption. Nice radio
9.0 condition. 160 channel Alphanumeric display. With antenna
and battery. Great ham or public safety radio. $300.00

GE MPD select model 470.- 488 MHz. 48 channel Alpha-Numeric display.
With battery and antenna. 7-7.5 $75.00

GE PCS UHF 440 - 470 8 channel with battery and charger. Looks
Good. $85.00

GE PCS VHF 150 - 170 8 channel with battery and charger. Looks
Good. $85.00

GE PLS VHF 16 channel. These average an 8 - 8.5 condition. 150 -170
but I have programmed these in the ham band with no trouble. These
have battery, and antenna. $75.00 each

GE MPS VHF 12 channel. 8.5 condition. New antennas and used batteries
Standard charger. $60.00 each have 2.
.
GE Monogram UHF 10 channel portables. 3 radios 2 new batteries and 1
good battery. With 1 dual slot charger. $175.00 all 3 radios.

GE Mobiles

GE Ranger 150 N9HH0A110A 150 - 170 110 watt drawer unit only.
This will work with the control heads and cables I have below.
$75.00

GE MVS UHF 440 -470 128 channels. Scans and works good.
Looks great and is programmed on the ham bands.$175.00

GE MCS UHF 440 - 470 4 channel 10 watt mobile separate speaker is
also the control head. With mic. $85.00

GE MLS Low Band 16 channel scan. 42-50 split. New mic. Should
Program to 6 meter ham. 60 watt $150.00

GE Mastr II UHF 75 watt with pre-amp. No Icoms drawer only.
MC65KKG88B $90.00 each only 1 left

GE Mastr II Lowband 42-50 slit 110 watt. MC74KCN33A
With 1 set of Icoms $25.00 each I have many.

GE Mastr Pro Low band 110 watt 42 50 split. MT74TCS33
With 2 sets of Icoms. FREE. You pay shipping and packing. I
have many.

Master Exec II Lowband 30-36 split, 100 watt, CG and NB. With Icoms

And most accessories. $30.00

GE Mastr exec II VHF Mobile extender (repeater like Pac rt) for Mastr
II or Delta. $20.00 each

GE Mastr exec II VHF Mobile extender for GE Ranger (only Exec II that
I have seen marked Ericsson) $65.00

GE S990 head 128 channel scan. Not tested. $60.00

GE S550 head 16 channel looks good but not tested. $35.00

GE S700 head and complete Motorcycle cable set for Delta or Ranger.
16 channel model has short cable and some handle bar mounts. Mic
included but no speaker. $50.00

GE S825 Scan head. With Mic and bracket. Alpha numeric head

For Delta or Ranger. 16 channel Ranger can have 224 channels with

this head 32 channel radio can have 448 channels. This head can

control siren and PA system. You can also use this head to program

Deltas and Rangers. I have cables for this head. $175.00

GE Accessories

GE Duplexer Mod DB4075 P/N 19C307166P2. tx453.xxx rx458.xxx
With cables. 4 cavity. $175.00

GE Duplexer Mod P1 P/N 19C307166P1 tx453.xxx rx458.xxx
With cables. 4cavity. $175.00

Mastr II control cable. $8.00 each

Mastr II head for mobile repeater operation. $1.00 each
Minimum 5 at this price.

Mastr II Mic. $5.00 3 for $10.00

Mastr II 8 channel tone boards. $5.00

Mastr Exec II VHF receive section. $20.00

Mastr Exec II VHF Exciter. $18.00

Mobile Repeater cable for Mastr II. $10.00

Mobile Repeater cable for Delta or Ranger. $20.00. I have seen programming cables made from these.

GE white Versatones, 103.5, 162.2, 173.8, 179.9, 186.2, and 203.5. $4.00 each. I have a large amount of 203.5,186.2, 179.9, 173.8, and 162.2. If you buy 10 = $3.00 each. Buy 15 =$2.50 each. Buy 50 = $1.50 each. These are the only frequencies I have.

GE Mastr II Icoms. EC = $5.00 each, 5C = $10.00 each. Picked up 3 sets of UHF 2C Icoms $30.00 per set of 1tx and 1rx Icom. I have Low

Band Icoms.

GE Delta cables. These are the downloading type used with the S820 heads. And all other heads $40.00 each

Delta mounting plates. $10.00 each

Ranger mounting plate. $15.00

GE Mastr II mounting plates $15.00 each

Power plugs for S500, S550, C500 etc heads. Good pulls $5.00

GE S-550 / 500 and others mounting brackets. $5.00 each

GE PCS Universal charger. With wall transformer $20.00 each

GE MPI desk charger with wall transformer. $10.00

GE MPI Rack charger, 8 position. 25.00

GE MPI Mobile battery charger, Rare. $20.00

GE Battery discharge analyzer. For MPA, MPD batteries. Attaches to a rapid rack charger with a DB 15 cable and uses a MPD body to attach a battery to. Has LED readout in display area of MPD body to tell discharge rate. Another rare GE goodie. $45.00

GE shoulder strap like new, attaches where belt clip is. $15.00

GE Belt clips. $10.00 each

GE Voter. Has 9 total rec. cards and 2 TX cards. With extender card and power supply / speaker. $200.00

Home made S825 programming cable. Works great but I just bought a

Factory GE cable so I do not need this now. $20.00

Other Radios and Accessories

Motorola X9000 UHF 100 watt. Has 64 channel head non-DTMF. With

cable, Speaker, and mic. Ready to program and use. $300.00

Motorola HT50 VHF 2 channel 150 - 170 belt clip holder battery and Charger. $75.00

Motorola MT1000 UHF 438 - 469. 16 channel scan. Has battery , charger,
and stubby antenna. $165.00

Motorola Maxtrac VHF 40 watt 16 channel scan. 5 pin. With Mic. $225.00

Motorola Radius / Maxtrac VHF 25 watt 16 channel scan. 16 pin port. With mic. $200.00

Uniden SPS 802TS 800 LTR portable. With charger. $75.00 Pair.

EF Johnson Challenger 5852 portables. VHF I think. With charger and batteries but the batteries are dead. Radios make squelch noise when powered up. As is $40.00 pair.

Yaesu FTH 2009 VHF portable. 6 channel. Works great on ham and public Safety band. With wall charger $85.00

Marconi UHF portable. 16 channel scan with NOS battery. Made by Midland. $65.00

Midland 70-336B VHF Mobile radio. 8 channel scan. with mic.$65.00

Motorola GP300 VHF 2 channel. on ham band. Has battery OK condition and charger. $150.00

Motorola GP 300 UHF 2 channel. Has good battery and rapid charger $150.00

Motorola Mitrek VHF high 110 watt drawer only. $40.00

Motorola MT500 VHF nice shape. Crystals removed but I have 1 set of crystals for each radio. Also have a working battery and charger for each. I have 4 of these. $50.00 all

Voter from IMTS phone system. 2 rec. and 2 TX cards. $40.00

Maxon Rapid Rack charger for 0510/0520 radios. Think they will work with the sp2000 as well.$35.00

Cushman CE3 Service monitor. Has model 330 Broad band mixer / watt meter

Duplexer tester plug-in. Also has 201 scope plug-in. Some of the numeral lamps are out but you can see the numbers with a light. Works well and makes a good starter service monitor. $350.00

Motorola S1350C Wattmeter. Has case that also holds 3 elements and has

5 watt 100-250 MHz, 50 watt 100-250 MHz, 100 watt 100-250 MHz, 500 watt

100-250 MHz, 50 watt 200-550 MHz, and 100 watt 25-100 MHz elements. $200.00 or I will trade for a Telwave 44 wattmeter and case.

Consignment section

This area is for a few friends who like those other radios you know "Motorola" They are good people and I will pass along any trades you may wish to make.

Motorola single rapid chargers for HT600, MT1000, P200. $25.00 each

Motorola HT1000 UHF Intrinsically safe Re-cased looks new. 16 channel scan with charger. $425.00

Motorola Saber II UHF 48 channel scan. With battery and antenna. 9 condition $300.00

EF Johnson Challenger UHF 80 watt trunk mount, 99 channel Alpha-Numeric head. $225.00

Want List not FS
Extra parts for GE suitcase programmers Data modules, Printers, cables, proms, Anything you have extra. I need some UHF 450 - 470 scan MPD radios. How many do you have and what do you want for them? Johnson scorpion program cable. Looking for an FT90 for the wife's car.

I would like to play with a VX-150 if anyone has 1 to trade.

Terms
All prices are plus shipping from 40201. All items are used unless noted and only have a no DOA warranty if I say it works. If I say not tested your on your own. If I think it may be bad I will not list it. I take cash, Postal Money Orders, Paypal, and checks but I hold them for up to two weeks to clear before I ship. If you have a question E-mail me. Contact me off list at. Gundoc@insightbb.com

Well,there's the TEK 1401 or 1401A,that was designed to connect to the 323
scope and had BW up to 500Mhz(can be used with other scopes,too).

Or there's a 7K mainframe(7603) and a 7L12 or 7L13 SA plug-in,which goes
10Khz-1.8Ghz.Or find a 2710,2712 portable SA,looks like a 2213 scope,goes

to IIRC,1 Khz-1.8Ghz.There's several HP analyzers available used,too,but I don't know model numbers for HP. You need to peruse a few used Test Equipment company catalogs. Google ought to turn up several.

There's also an inexpensive SA I've seen listing for about $1500 new,I believe it comes from Taiwan,and marketed under several companies name 'brands'.I saw them in hobby electronics mags like Nuts&Volts.

SA's are not cheap.

I only occasionally use my Pryme pr52 HT, and I can never
remember how to do stuff with it. And I can't find my manual.
Anyone know where to download the pdf? Pryme doesn't
have it on their web page (I get error 404).

Dick Hughes <rhughes33@cableone.net> wrote in message
news:9jbgqucfl2bhrnibrloss3nv05gipof1h0@4ax.com...
>At least we agree.
>
> 73, Dick - W6CCD

Dick,

Yes we do agree. For the lazy among us.. please see the
text quoted below from the FCC part 95 rules.

Please note the phrase "FCC certificated CB transmitter "
This is also known as "Type Acceptance" all radios in use
in the CB service must be certified.

Period.

I, for one, am very tired of the apologists among
the Amateur ranks who continue to insist that it is
OK for anyone, anywhere, to have and use radio
transmitters with no regard to standards or licensing.

I suspect that this is because some of these fellows
wish to use Amateur radios on CB, the infamous
"Freeband", or as a pirate broadcast station on
41 meters. Then there are the police and fire
"wannabes" on the VHF frequencies.

Guys, you are not fooling anyone, and it
is YOUR license at stake, not mine. But you
put our entire service at risk as a result of
your actions.

This is why I hear CB stations all over 10/12
meters. This is why taxi services feel free
to use Amateur bands for dispatch services.
This is why I can hear a CB'er on 27.025 as
clear as a bell on 21.305 mhz, even when the
nutcase is in Alabama, and the MUF is not
at 27 mhz yet, and there is 6 mhz separation!

Is this what we want for the future?

That's the way we are headed, and Amateur
radio operators don't need to be helping them
with the modifications.

I've said all that I plan to on this subject.
It is very clear that there are licensed Amateurs
who are part of the problem. In future years,
when the good buddies have taken over 20 meters,
you have only yourselves to blame...

[Page 536]

TITLE 47--TELECOMMUNICATION

COMMISSION (CONTINUED)

PART 95--PERSONAL RADIO SERVICES--Table of Contents

Subpart D--Citizens Band (CB) Radio Service

Sec. 95.409 (CB Rule 9) What equipment may I use at my CB station?

(a) You must use an FCC certificated CB transmitter at your CB
station. You can identify an FCC certificated transmitter by the
certification label placed on it by the manufacturer. You may examine a
list of certificated equipment at any FCC Field Office or at FCC
Headquarters. Use of a transmitter which is not FCC certificated voids
your authority to operate the station.
(b) You must not make, or have made, any internal modification to a
certificated CB transmitter. (See CB Rule 25, Sec. 95.425). Any internal
modification to a certificated CB transmitter cancels the certification,
and use of such a transmitter voids your authority to operate the
station.

Then after all that, disable your scan (this is always on with trunk mode)
and power save or you'll never get enough tone A.

If you really need it, get a pager that knows how to power save and
alert properly too.

:
: Eric, the two methods are 1. Contacting the local radio shop who services
: your pagers, or 2. Find an old motorola brick radio, or pager, and read the
: numbers off the tones. You'll need to cross reference them to a
: frequency(hertz) chart in order to get the numbers kenwood is looking for,
: but it can be done. If you manage to get the QC (quickcall) numbers, hollar
: back, somewhere I've got the link to the cross reference chart.

FS/T TEN-TEC 705 MICROPHONE

I have a like new Ten-Tec 705 mic has a 2 tone SSB Pulser to tune your amp installed. Does not have the Goofy Beer Can foam head I put a Brand new Black Round Bullet style foam Ball on the head. I hate Those Grey beer can foam heads!. I think i still have it here if you want it though.
I put a Brand new 12 foot Heavy Duty Motorola High Way Patrol type Coiled cord on it Also. So you can move around in the shack. It is currently wired for a Kenwood TS-930.
I would like to eithier sell it or trade it for maybe a Kenwood mic or a Shure 526T. Or sell out right for 80.00 + shipping. paypal check etc.

4164. Icom IC-2100H Noise Fixes

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-13 02:04:23 UTC
From: mlinden@enteract.com
Message-ID: <aoakb7$527$1@bob.news.rcn.net>
Source record: 38625

My Icom IC-2100H suffered from both alternator whine and a crackling/static-type noise through the speaker on transmit. However, I think I managed to solve both problems...

Alternator Whine (Tx/Rx)
This radio seems very succeptible to alternator whine. I had two installations (91 Mitsubishi Eclipse and 98 Honda Civic) where I ran the power leads directly to the battery but was still greeted with alternator whine on both transmit and receive. After experimenting, I found that I had to make two changes to completely eliminate the alternator whine. 1) Add a 20-Amp Radio Shack power filter, and 2) disconnect the radio's ground lead from the battery and ground the radio through the filter by grounding the filter to the dash. It seems that the radio does not like being grounded at both the battery and indirectly through its mounting bracket to the dash.

Crackling/static Noise (Tx)
The general consensus on this problem is that it is caused by a poor ground inside the radio. I corrected the problem by reflowing the two ground solder joints between the radio's PC board and the SO-239 (a hairline crack was visible on one of the joints). I also tightened all of the screws holding down the PC board. I had no crackling/static through the speaker on transmit after doing this work.

Just FYI ;^)

Larry:

Sorry to hear about your radio. I have used Electronic Equipment Repair Service for a couple of repairs. Byron (owner) is fast, does high quality work and his costs are reasonable.

A icom OPC-478 cable will work for programming the radio. The cable for the yaesu vx-5r will work too. Both need a mono adapter.

Does anyone make a good transceiver for all or most modes that will operate in the Technician Class license bands, 6 meters and up? If not what could you recommended for operation in these bands with fewest number of transceivers?

In the September and October 1989 issues of Radio-Electronics, there is an article by Fred Baumgartner on a build-it-yourself spectrum analyzer. The "hard part" is done by a Zenith TV tuner module that converts 50-600 Mhz to 63 MHz (Channel 3) output. This is followed by a TDA7000 FM receiver chip. There is a 555 to generate the swept tuning voltage for the tuner and another oscillator for sync. They were selling a complete kit of parts for $187 in 1989, which is around $280 today.

Hummmmm. Maybe there is a IC-706 (144 mhz) and a IC-706 MKII G (70 cm).

Wonder if anyone who has one can confirm....Maybe the MKII G goes to 70 cm

I looked here: http://www.qsl.net/sm7vhs/radio/icom/ic706/ic-706.htm It
looks like a scanned spec and it would appear to go to 144 mhz.

Hi,

Its seems in fact the problem is worst than that.
Even in receive mode, thus using 1 amp or even less, the TS doesn't
switch on. In fact it doesn't switch on at all in my... rabbito-Gulf,
Hi!

According an OM friend of mine, this a typical problem with this RTX.
If the voltage or current is not exactly what it requests, it doesn't
swich on.
Similar problems occur with automatic antenna tuners.

I will try to get the true explanation contacting the TS-570D designer
in JA.

Later (one week probably to get the answer).

I'd suggest checking out other brands and models too. For example there is the new Kenwood TS-2000 that covers HF/6m/2m/70cm and has an optional 1.2ghz module.

I imagine that Yaesu also probably has a model similar to either the Icom or Kenwood.

If you want to scour the hamfests for used radios, several companies used to make all-mode VHF/UHF only radios. It's my understanding that they were quite good. Unfortunately, I can't help with model names.

There used to be a time when there were all-mode rigs for 6 meters and up. Now, mostly you'll find hf rigs with the vhf/uhf bands, as well. They're all fine for a Technician, and you'll be hf ready, should you upgrade to general. Look at the icom 706 mkiig, the yaesu ft-100d, the kenwood ts-2000, the yaesu 847 and, for 6 & 2 alone, the ten tec 6&2. Prices start in the $750-800 range, plus the cost of a power supply. All of the rigs are reviewed at the ARRL web site, in the member's only section, as well as at the free eHam.net.

Oh, one other rig: the icom ic-910h, which is vhf/uhf only, but a little pricey.

You are looking at the first version of the Icom. There are 3 versions that
I know of. The origional, the markll and the one with the G on the end.
The latest has 100 watts on low bands and 6 meters, 50 watts on 2 meers and
20 watts for the 430 to 450 (70 cm) band.

Message-ID: <9Qhq9.21$b4.1537@sooner.brightok.net>
Source record: 38649

Yes, Yaesu made some 6m/2m/70cm radios, probably the FT736 is the best of the lot, however, they seem to sell for $600+, and have limited RF output, on the order of 10 watts I believe.

The TS-2000 is a nice radio, but it's well over $1500, so kinda steep for the 1st time buyer. Yaesu has the FT817 at around $650, but you're looking at low RF output again, There is a newer, higher power Yaesu, the FT849?, but I don't know the price or specs. For my money, the Icom 706 MKII-G, at around $850, is the best of the lot for under $1000. Be prepared to spend a LOT of time with the manual! this radio has a steep learning curve. Our ham club has one in the shack, and I've threatened to chain the manual to the radio.

> Oh, well, guess I'll wait a while longer.

WFM. Using Mozialla 1.1a under OS/2.
His old, AOL site sayeth: "K1EL Has Moved to www.k1el.com "
which is actually: http://k1el.tripod.com.
And, his new site 'plays' OK for me (-- except for the damn
"dancing elephants" that Tripod sticks in at the top of EVERY page.)

Howdy.....
I am selling my older Yaesu equip to move up into the digital world

For sale
FTDX - 400 with external VFO (FV400s) and external Speaker

FTDX - 560
All equipment is in excellent condition...the 400 still have
protective film on the face plate

The VFO will also work with the 560

asking $550.00 for the 400, VFO and speaker
$400.00 for the 560

73's
Pete
KG4VGH

I've got 2 Avantek CR/CT 2000 catv analyzers and sweep transmitters here for sale. 300mhz? All manuals included. 1 works fine,
other will work if you swap out a few boards.

It is hard to grasp when stated in such a manner.
I believe that you were attempting to convey that
Modified "Part 97" equipment can be used in the Part 97 service,
but that modified "Part 95" equipment cannot be used in the
Part 95 service. In your original posting, you wrote that merely
modifying the radio was illegal, and some found that confusing.

What amazes me is that someone would actually attempt to purchase stuff like this off eBay. I mean, come on, the person who would sell something like this is not exactly a person of high moral character, so what in the world would even slow him down from ripping you off? Certainly not his feedback rating - a bad feedback profile can be erased in moments by simply getting a new account.

And, of course, this clown wants only a money order or cashiers check - nothing that can be easily traced to him. He is probably also using a fake "business" name to make it even harder to find him once he steals the money. And I see the suckers are already lining up - two bidders so far.

Yeah, but $1500+ is kinda steep for the first time buyer, no matter what their license class. I got a real deal on a Kenwood TS-440SAT w/ matching pwr supply and desk mike for $350 (Whoopee!!!), but even an Icom 706 MKII-G at $869 is half the price of the TS-2000. For the same money, you could get two 706s and put one in the mobile.

Well, as much as I hate to see CB'ers use that stuff and trashing the bands with bleed over, it's not illegal to sell/own one. It is illegal to use it, though. So I see no problem with him selling. He should note in his ad that it is not for use on anything other than amatuer radio bands.

As I recall, E-bay got into hot water with the FCC about this sort of thing
some time ago and they agreed not to permit auctions of CB amplifiers and
the like. So I wonder how this is now being auctioned.

It is illegal to sell it. That's why our amps don't have 10 meter
capability. If it works on 10 it works on 11.

I have a hr 2510 that covers all of 10 and 11 meters. I also have a
mobile amp apx 200 watts. These items would be illegal if USED on the wrong
freq, at the wrong power outputs. It COULD be illegal to use, even if sold
to a licensed operator. I personally would not sell it to a non ham.
As a seller, am I responsible for the stuffs use? legally no, morally,
maybe. Since I hate to see unlicensed ops get this stuff, I have it sitting
in my garage, collecting dust. (my personal choice)
You can sell a man a gun, you can sell a man bullets, you can teach him
to hit his target, but only he can murder.

4232. FS: Hammarlund HQ-100C - good condition - clock works

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-14 19:41:20 UTC
From: WB7AWK <boatanchors@hotmail.com>
Message-ID: <3dab1c3e$1_5@news.meganetnews.com>
Source record: 38691
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

Hi all,

I have for sale a good condition HQ-110C receiver, with a nicely working clock. No mods, works well although is a bit deaf on the upper band. I used to have this paired with a Gonset GSB-100 years ago, and it's just gathering dust. Nice face, has logo intact, no serious wear or tear, all original knobs. The only real flaw is one panel screw is missing and the 'bandspread' lettering on the face is worn.

$125 plus UPS from 98466 (around 30 pounds boxed). Payment via US Postal Money order, Paypal, or check (must clear first though).

Pictures are here:

http://www.boatanchors.com/stuff/hq100/face.jpg

Thanks for looking,

David WB7AWK

4233. FS: Hammarlund HQ-110C Ham Band receiver with Clock

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-14 19:55:10 UTC
From: WB7AWK <boatanchors@hotmail.com>
Message-ID: <3dab1f5b$1_2@news.meganetnews.com>
Source record: 38692
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

For Sale:

working Hammarlund HQ-110C ham band only receiver,
with working clock. Hears well on most bands - controls
need cleaning, but is essentially in good shape. Missing
the 110C logo on the front, and has 2 mods on the rear
apron - neither of which is anything big. There is a BNC
antenna jack and an RCA speaker jack, installed in the
preformed mod holes that the receiver already had. They
are sensible mods, in that they do away with the screw
terminals. But easy to undo. The clock works - makes a
vibration that's a little annoying - I think the grommets that
mount the movement are worn and the vibration is getting
through.

Received 20 meter SSB and CW this afternoon with no
problems.

Price is $125 plus UPS from 98466 (around 30 pounds
boxed). Paypal, US Postal Money Order, or checks (10
days to clear).

Henry 2KD Classic desktop amplifier for sale. 2 3-500 tubes, 1200 watts output on all bands (including WARCs)
This unit has recently had the ten meter modification done at the Henry factory here in the Los Angeles area.
The cabinet and front panel are in excellent condition with just a few minor dings on the top rear of the cover. All markings on the faceplate are perfect.

Asking $1050 plus shipping. I will have the Henry factory ship this unit safely to you. The weight of this unit is approximately 85 pounds. I would prefer local pickup in Southern California.

4237. Yaesu ATAS-100 Mobile Antenna QUESTIONS

Source record: 38696

Greetings,

I have some questions regarding the Yaesu ATAS-100 Mobile Antenna.

I just purchased the Yaesu FT-100D to use in my car (Ford Escort). I used the FT-100 when riding with a friend, and it seemed to perform well and the ease of operation with the ATAS-100 was exciting and simple.

Questions:

1) Antenna Mount Choices: Now, I really do not want to drill holes or anything that would damage the vehicle. I am looking at the Lakeview Quad Magnet Mount or Super Quad Magnet Mount on the Mag-mount side, the Trunk Lip or License Plate Mount (Lakeview) for more security knowing the antenna won't fly away.

I am aiming towards the Mag-Mounts, at this time. Will the Quad Magnet mounts have enough strength to hold this antenna to the vehicle? I would like to use it on the center of the roof, or, if necessary, on the trunk lid. Will the wind load (80-90 MPH max on the road) cause the mount to detach, or does it have sufficient holding strength?

2) PERFORMANCE: I have read tons of review on eHam, and would like to receive a few more. The reason(s) why I am choosing the ATAS-100, is due to ease of operation and decent efficiency. I don't want an antenna that will be cumbersome or "offensive." I think other Screw Driver Antennas (such as Don Johnson's Screw Driver) would be a little too large for this car to handle without a lot of construction work with the mount. Also, I don't want to stop and replace a jumper or resonator to change bands. Pros and Cons would be great!

That about does it, and I thank you for taking your time to assist me on my HF Mobile Setup. I can't operate from my home, so this is the next best thing. See ya'll on the Air & 73!

Please Email response to: radiotek@pacbell.net

I have for sale in very good condition a Yaesu MD-100A8X desk microphone. I have the instruction sheet, but no box. The PTT lever has a little paint wear on the edge. Other than that its in great shape and works fine.......I will take $75 plus shipping......WZ1U Steve / Lakeville, Mass.

Pictures upon request !

Forget Mag Mounts. You need a true Ground to use the ATAS-100. The
Quad Mount will hold the antenna, but you will lose the ability to
autotune unless you run a direct ground from the antenna to the frame
of the car. Remember the Shorter the better. The License plate mount
is Iffy at best with the wind velocity @ 80 Mph, but with some
advanced Afro-American Engineering it could work also.

>to a licensed operator. I personally would not sell it to a non ham.

Sadly, most of the amps made for CB use aren't legal to use anywhere and
don't have anywhere near the spectral purity required for 10M operation.
That's the real problem.

I don't worry about CBers using outrageously high-powered amps and trashing
their own bands. What I worry about are CBers using outrageously high
distortion amps and trashing the ham bands with spurs.

> As a seller, am I responsible for the stuffs use? legally no, morally,
>maybe. Since I hate to see unlicensed ops get this stuff, I have it sitting
>in my garage, collecting dust. (my personal choice)

I'd sooner see unlicensed operators get clean linears for them to use than
to get cheap junk that makes hash of bands that legitimate users are
trying to work with.

The FCC appears to have given up on enforcing any regulations regarding
the CB bands, and the CBers don't seem to care about self-policing, so
I can't really make much comment about the trashing of the CB bands.
But I can sure make a lot of comments about the trashing of 10M and 6M...

Hi, everyone.

I am getting "previously enjoyed" 6-el KLM monobanders for 10 and 15 meters, but the seller does not have manuals anymore. Is there anyone out there who can scan or photocopy them for me (at least the diagram). I'll pay any reasonable fee. Search on Google turned out zip.

Thanks and 73,

Zoran WA7AA

Not a QRP dude but, I feel if you cant do the job with under 200 watts, why add to the clutter. All my friends have amps to use "only when needed" yeah, right! Amps create the need for amps.
I have none here anymore, so if you here me out there, it is because my (our) antennas are right, the conditions are right, and no one is chasing a cert for "worked all operators" or something. OK, I have said my 2 cents worth, opened up for the flaming contest replys, etc. Enjoy the hobby!
Thats all I have to say about that.....F Gump

Forget the Mag Mounts!!! That antenna **requires** a ground, a good one.
I have the antenna mounted to the liftgate on my '99 Jeep Cherokee using a
heavy duty trunk lip mount. Make sure it is a **heavy duty** mount.
Mine is a Maldol RM-750. Also, the bulk of my antenna is wind-shaded, and
RF-shielded a bit, by being mounted lower on the vehicle (my prime
directive is that the vehicle must go into the garage).

Don't even think about any of those convenience powered mounts that allow
you to flatten the antenna against the vehicle roof. They aren't heavy
duty enough for such an antenna at any kind of speed.

Sorry, but if you select a trunk lip mount, you're gonna have to clean some
vehicle paint under where the mount screws against the trunk lid or
hatchback or liftgate or whatever. By the way, this may seem like a stupid
thing to say, but check to see that the vehicle mounting surface is metal!
My '89 Cherokee's liftgate was fiberglass! At least D/C Jeep went back to
making the things out of metal before I traded for my '99! As stated
earlier, this antenna requires a good ground. You may end up having to run
some ground strap from under the antenna mounting screws to the vehicle
frame or some equally large, inaccessable part of the vehicle.

Decent effeciency? Don't go there with a compact antenna. You want decent effeciency, be the first on your block to go mobile with a quarter-wave dipole (it ain't easy, but it's been done!).

Now, performance? That antenna ROCKS!!!! This comes from using it for less than a year, mobile in the Jeep, the FT-100D pushin' 100W of bone-crushing RF through the ATAS-100, i.e., no mobile amplifier, etc. As a mobile, I worked half way to DXCC before the HF bands went into hibernation for the summer. I sure hope this fall the ol' bands perk up, 'cause I'd like to finish my DXCC on the FT-100D/ATAS-100 mobile.

The antenna autotunes on all bands, including the WARCs with no problem.

You might want to hold off a bit on purchasing one, though. Yaesu is about to introduce the ATAS-120. It looks more like a screwdriver antenna in that it does not have the rubber boot and it tunes faster; but, if you have your heart set on an ATAS-100, the ATAS-120 ought to drive the price of the '100 down a bit.

Hope this was informative. Good luck with the installation!

Avoid the MK V, bad reliaibility record.
PRO II & PRO have a very high reliability record.
More versitile, better features, better resale.
All around a better radio.
In my opinion.
Read more about them on my web site: www.qsl.net/kk5dr/

WANTED TO BUY...A NON-working older ELECTRA/Bearcat base scanner, model BC-20/20 (preferred) OR an older NON-working Electra/Bearcat BC-220 base scanner FOR PARTS. Need the FACEPLATE to replace broken one on mine that the USPS "killed" with a FORKLIFT!!! Will buy either JUST the faceplate OR the entire NON-WORKING scanner for parts but....the faceplate MUST be complete, intact, not cracked or broken, and in VERY good to EXCELLENT condition (no deep gouges, scratches, etc., but OK for faded silver paint around edges...)as it is THE part I'm seeking. Will pay decent price for the right one. IF POSSIBLE, pic of your unit would be MUCH appreciated WITH your Email reply. Please remember I want to REUSE the faceplate so it MUST be restorable, VERY intact, AND USEABLE !!I will answer ALL replies. Also have some vintage scanner parts for trade/barter to "sweeten" the deal as well IF DESIRED...LMK your needs.Otherwise, will buy radio or faceplate only outrite from you.

THANKS IN ADVANCE to all who reply. (<:

Because there are lots more Icoms out there than there are Yaesus. In the HF market, Yaesu is a distant third. Icom holds the higher end of the HF market (currently with the IC756PRO/PROII), and Kenwood has the lower end (TS-4x0, and now the TS-2000). About the only thing noteworthy that Yaesu has had in the last few years is the FT-817 portable/QRP rig.

QST reviewed the IC-746PRO in the May 2002 issue (Very positive review), and the FT-1000 Mk.V Field in the August 2002 issue (kind of ho-hum). If you can't find these to read, let me know.

All 5 license classes are sitll in effect. The FCC is just not issuing new licenses but three as of now. The nocode Tech good for 50 megs and up, the General , and the Extra. The novice and Advanced class licnese holders that have not upgraded are still around. All the band limits are still in effect so the General class must stay in the general portion of the band.
Look at the www.arrl.org page for the rules.

I know this question is outside the of the news group but I knew it would get answered here.
Since there are basically 3 licenses in the U.S., is there an advanced portion on the bands? Can I as a general license holder operate in the advanced portion? Or does the license band plan go from general to extra? (I have been out of haming for the past 15 years.)

Some of you ebay regulars explain this one.

Found an item on ebay that I need. Set up a very generous esnipe bid for it. 18 hours before the auction was due to end, the seller withdrew the item from sale.

It's his stuff and he can do what he wants with it -- but -- it seems if you put something up for sale you should leave it there. Can he do this without penalty?

You are more likely to damage the vehicle with a mag-mount
than you are if you make a few thoughtful holes (and that's
assuming that you consider said holes to be 'damage').
Do it once, and do it right...

Yes... other than having to pay the listing fee. No... auction and bid cancellations are not "right", even though Ebay buyers and sellers can cancel their bids and auctions without any feedback ramifications.

I was watching an auction a few weeks ago where the high bid between two sole bidders got up around $100. Within the last hour of the auction, the high bidder retracted their bid. The other bidder got the goods at their original $9.99 opening bid. I bet the seller was cussing pretty good about that one.

Even though most Ebay auctions aren't worth the time or energy to enforce, they're still contracts. Just try to pull crap like this at a real live estate auction and there will be heck to pay...

1. Commercially certified radios modified for amateur use are no longer certified, and can't be used for their original purpose. Same Idea applies to Certified CB rigs that get modified. They can't be used as CB's anymore so 95 would not apply. Only 97 would if it were intended to be used as a ham rig.

2. You can drop ham frequencies in your commercial rig if it does not require modification to do so, but you risk the license of the commercial operation if someone operates on the ham frequencies from the "company" radio without a ham license (not a good idea if you ever need to turn eq. back in).

3. You need to be licensed to operate in most other services besides CB.

4. It is not required that amateur equipment operate exclusively in the amateur bands, however there are specific 11 meter exclusions for amplifiers...BUT,

5. Amateurs are bound (as is any service) to use only the frequencies of their license grant with appropriate equipment or risk the loss of all equipment, etc, etc...

6. Amateurs operating out of band is no more legal than any other yokel operating a bootleg or modified CB, but the ham would probably get slammed harder because he should know better.

I have seen auctions where the item was pulled as a result of something happening to the item that lowered it's value or made it worthless. Perhaps this was one of those cases? I for one appreciate when a seller pulls an item that is found to not live up to it's description, rather than to let the auction conclude and leave a ticked off customer..

Joe:

In many instances, the seller is approached by someone who negotiates a private bid. This is definitely against the rules of eBay (and morally wrong as well) but it does happen. The buyer secures the item he wants without the wait (and competition), and the seller avoids the extra charge of the eBay commission. Of course, the seller and especially the buyer lose all "protections" that are built into the eBay systems.

I have been approached routinely with things I have sold by a potential buyer who requests canceling the auction and selling immediately to him (or her). Once I've put something up for auction, it's going to stay there until the auction ends normally. Unfortunately, this is not the case with some sellers...

Actually, you need to look at the regulations again. A change in the rules several years ago made it illegal to sell non-certified equipment capable of transmitting on the frequencies in or around the CB band (95.603, 95.607, 95.639, and so on).

> He should note in his ad that it is not for use
> on anything other than amatuer radio bands.

It doesn't matter what he says in the ads, if it can transmit on the frequencies in or around the CB band, it is still against the rules.

Probably because he avoided using the combination of words or circumstances that would trigger eBay's auction filters (he listed it under ham radio, not CB, and didn't mention CB in the page). Because of that, eBay never even noticed it. If someone had complained, it would have been pulled.

They (CB'ers) wouldn't pay the price for quality. They want lots of power cheaply - that's why this auction failed (it was too expensive).

Then what about older 50's era ham transmitters that have the 11 meter
band already on them? I suppose a ham could legally sell that to
another ham as the average cb'er wouldn't know how to tune a tube
based transmitter.

>> He should note in his ad that it is not for use

Still it might be fun (and very illegal) tu tune an old collins (50's
era) rig (like the 32-v series, KWS-1 or KW-1) on Ch 19 (27. whatever
it is) and QRM the cb'ers for awhile.

100w (or even a KW) of dead carrier (or whistles & other noise) would
drive them nuts on a cb channel. But then I really don't like cb'ers
anyway.

Would I ever do it? Nope...

Message-ID: <fdonqu8b3ib56hvb1fle8c78fgnia35v1p@4ax.com>
Source record: 38582

I appreciate all the input that I have received so far.

Well, as far as efficiency, you can only get so much ERP emitted in a mobile setup that would probably would not surpass a 1/2 wave dipole's efficiency on HF.

From what I have read, most ATAS-100 owners had to tap the vehicle's body for their ground, so I knew this would probably happen. I have a 2m 5/8 wave Trunk-Lip mount, and it works wonders. I know from past experience, that the mag-mounts can scratch the surfact of the paint, which sucks. I guess the trunk-lip will cause less damage.

I believe that the 2m Trunk-lip does make DC Contact with the car's body, so there is one Grounding point, but I probably should still run a ground tap from the antenna.

As one guy mentioned, Yaesu is introducing the ATAS-120 Antenna, which may (should) bring down the ATAS-100 Price a little.

Ok, now I am leaning towards a "heavy duty" trunk lip mount, but does anyone have any manufactures and/or models in mind??

Thanks again & 73,

Mike KQ6MU

In the QST review, the Field version performed slightly less well than the non-Field version, so maybe the circuitry is not quite the same.

The Yaesu rigs and the Icom rig have all been reviewed in QST. If you're going to spend a couple of thousand here, you might want to subscribe just so you can access the reviews at Arrl.org. The Icom rig received an especially nice review; the 746pro is apparantly very comperable to the 756proII. Plus, you get 6 and 2 meters, as well.

Those Quad & Tri Mag mounts work fine with the ATAS-100, & you will Not lose the ability to auto tune. I ran an ATAS-100 on a quad mag for over a year with excellent results, & I know at least 4 people doing so right now. IMO, The ground plane effect you get from the Quad mag ount in the center of the roof is at least as good, or better, than many of these "Trunk" & clip type mounts that use a couple of tiny allen screws to make ground....

If it puts out more than the specified limit of (I think) 5 watts AM or
24 watts p.e.p. sideband, then 'taint legal. If the radio transmitts
more than thee limits then it can't be certified for that band. Ham
equipment, to be legal, but since when did being "legal" mean anything
to CB'ers, would have to have the drive reduced considerably.

Guess that most do not take time to look at the rules now: The ham rules are about the only FCC rules that say what you may not do , not what you may do. If it is not in the rules, it should be ok tuil a rule is made.

Here is a cut and paste from the arrl.org copy of the rules. It only addresses the amplifiers. It has nothing to say about the transmitters. Also seems to exempt any amp made before the date the rule was made.

97.315 Certification of external RF power amplifiers.
(a) No more than 1 unit of 1 model of an external RF power amplifier capable of operation below 144 MHz may be constructed or modified during any calendar year by an amateur operator for use at a station without a grant of certification. No amplifier capable of operation below 144 MHz may be constructed or modified by a non-amateur operator without a grant of certification from the FCC.
(b) Any external RF power amplifier or external RF power amplifier kit (see 2.815 of the FCC Rules), manufactured, imported or modified for use in a station or attached at any station must be certificated for use in the amateur service in accordance with Subpart J of Part 2 of the FCC Rules. This requirement does not apply if one or more of the following conditions are met:
(1) The amplifier is not capable of operation on frequencies below 144 MHz. For the purpose of this part, an amplifier will be deemed to be incapable of operation below 144 MHz if it is not capable of being easily modified to increase its amplification characteristics below 120 MHz and either:
(i) The mean output power of the amplifier decreases, as frequency decreases from 144 MHz, to a point where 0 dB or less gain is exhibited at 120 MHz; or
(ii) The amplifier is not capable of amplifying signals below 120 MHz even for brief periods without sustaining permanent damage to its amplification circuitry.
(2) The amplifier was manufactured before April 28, 1978, and has been issued a marketing waiver by the FCC, or the amplifier was purchased before April 28, 1978, by an amateur operator for use at that amateur operator's station.

The comercial station engineers have not been required by the FCC to be tested and licensed for many years now. I have not really kept up with it, but think that unless it involves radar or public transportation such as airplanes or boats there is not much need of the old comercial license anymore.

I reported the auction to Ebay and immediately received notification
that it had already been reported. It remained for the duration of
the auction even though it did not sell. Either Ebay ignored the report
or they felt it was legal for auction.

Part of the "type acceptance" for a particular radio service is also limits on the harmonics and other spurious transmissions put out by the rig. On every radio service other than amateur radio and commercial broadcasters, the user is forbidden to modify their equipment is any way. Essentially all of these services are "appliance operators" only, and anything else is a violation for the FCC. How aggressively the FCC rules are enforced is a seperate issue. Speeding is always illegal, whether or not a state trooper catches you at it.

Commercial broadcast engineers are trained, tested and licensed, and their equipment is required to meet certain spectral requirements. They need to be able to verify this at any time the FCC asks.

Amateur operators are allowed to modify equipment as well for use on certain bands, but are supposed to be knowledgable enough to do this without creating spurious emissions that interfere with other bands, services, communications or electronic devices, and smart enough to fix problems before operating.

I've seen CB antennas advertised as being able to handle tens of thousands of watts, for a service legally limited to 5 watts into the antenna. Some of the people building the linear amplifiers and other gear are unaware or unconcerned of spurious emissions, and the problems created for others. Equipment is built to go into "additional" high and low CB channels, which are actually frequencies allotted to other services. All of these are thoroughly illegal, just part of the "outlaw" mentality.

It is the users who may face the brunt of any legal actions, and users of other services who have to deal with the interference (and legit users of CB finding it useless).

I'll check with our radio club's president, whose day job is as a
broadcast engineer for a local network affiliate's stations.

I imagine that a license would be helpful in getting a job, though.

Yes, there are still advanced portions of the bands. The advanced
license is grand fathered and will continue to be reissued to those who
already hold it - just no NEW advanced class licenses. You can't operate
in the advanced portion with a general class license.

I really like the Hamscope interface for CW. It is nifty to let the machine decode two CW QSO's while you decode a third one by ear. However, Hamscope isn't terrific at decoding CW on my rig. I get lots of extraneous characters even when the signal is way below the squelch point. Also, it often fails to decode pretty good signals with clean code. I read that improving CW is one of the current HamScope objectives.

Is anyone using something that works a little better?

Oh god, one of those people using that useless "snipping" software.
Just bid the maximum you want to pay and if you get outbid, then oh
well. Ebay will automatically up your bid until it reaches the maximum
you set, in order to try to win the auction.

Ralph,

You are right, broadcast does not require any kind of license anymore, and most stations are not giving much weight to a GROL.

The legal limits on CB, since 1977, are 3.5 watts AM at 50% modulation, and 25 watts PEP on SSB.

If you shop around, you should be able to find a decent HP 141T spectrum analyzer system that goes to 1250 MHz for under 500 dollars. A far cry from the SAM and the kits.

4300. Icom IC-V8000 Receiver, How Good?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-15 22:20:01 UTC
From: mlinden@enteract.com
Message-ID: <aoi4ah$79i$2@bob.news.rcn.net>
Source record: 38458

I'm looking for feedback from people who own the new Icom IC-V8000 2m mobile rig. Specifically, I'd like to know how you feel about the receiver's (sensitivity, adjacent channel rejection, intermod rejection, etc.). I'm considering purchasing an IC-V8000 to replace a Yaesu FT-3000M (the QST reviews of the two pretty much show that the receiver spec differences are a tradeoff -- some better, some worse), and I'd like to make sure that the Icom's receiver would be as good or better than the Yaesu's before I buy it. I've also recently owned an Icom IC-2100H -- I felt that radio had an excellent receiver, probably better than the Yaesu.

Any information would be appreciated!

4301. Re: Best sound card CW decoder?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-15 22:55:34 UTC
From: "Bob Lewis (AA4PB)" <rlewis@staffnet.com>
Message-ID: <uqp77himfljnb5@corp.supernews.com>
Source record: 38459

All CW decoders are plaged with at least two problems. One is improper timing by the majority of sending stations using hand sent code. The other is static crashes and QRM that momentarily obscure the CW signal. I have never seen a CW decoder that works very reliable except with noise free, stable signals and machine generated code (i.e. the W1AW broadcast usually looks very good here).

4302. Re: Questions about the hf bands

There is an "Advanced" portion of many HF bands, but a General can not operate there. Only Advanced and Extra. Currently the FCC is not making any new Advanced class, since the restructure.

Not any more. There's no First Phone certificate at all, and any bozo
off the street can become a broadcast engineer. Many do. I spend a lot
of time cleaning up behind them.

The equipment does need to meet certain spectral requirements but there
are no regular proof of performance measurements required any longer by
the FCC. Equipment does need to be type-accepted but you can use homebrew
transmitters on the air for broadcast service if they meet the requirements
and if the correct labelling is applied to the cabinet.

>Amateur operators are allowed to modify equipment as well for use on
>certain bands, but are supposed to be knowledgable enough to do this
>without creating spurious emissions that interfere with other bands,
>services, communications or electronic devices, and smart enough to
>fix problems before operating.

And amateur service is the ONLY service that does not have type acceptance
requirements on the equipment. This is unique and it is what allows hams
to use gear originally intended for many other services.

>I've seen CB antennas advertised as being able to handle tens of
>thousands of watts, for a service legally limited to 5 watts into the
>antenna. Some of the people building the linear amplifiers and other
>gear are unaware or unconcerned of spurious emissions, and the

>part of the "outlaw" mentality.

Historically, when did this start? I know CBers from the sixties
who say that the CB bands were once very polite and that CBers even
sent QSL cards. I saw the CB boom in the mid-seventies when all
pretense of politeness and legal niceties were gone.

4305. BEWARE!!...Doug Calladonato.....

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-15 23:58:04 UTC
From: klarrg@aol.com
Message-ID: <20021015195804.19555.00000130@mb-fs.aol.com>
Source record: 38462

..Be aware that a gent by the name of Doug Calladonato (njscanner@comcast.net)is selling several scanners (approx. 21 of them..) and, is willfully and maliciously misrepresenting the condition of these units to obtain a sale on them.He sold me two that he represented as in "excellent working order" and, that he "tested himself before sending them to me" that are BOTH totally non-working, useless units. I am out a SUBSTANTIAL SUM OF $$$ and he denies they were non-working at time of sale.Mr. Calladonato outright lied and denied several Emails he initially sent me that represented theses radios I got from him as TOTALLY WORKING UNITS...he says one thing IN PRINT in the original Emails then DENIES IT in the later ones..even tho' I have it IN PRINT IN MY FILES FROM HIM !! (???!!)

Upon opening the units, they were filled with poor-quality solder (attempted) repairs and had obviously been tampered with prior to the sale. The one unit has a squelch that will not close, and the unit wont even scan. The second one has such poor reception as to make it useless. If both units HAD been tested as seller stated, these problems would have been painfully obvious.
I have contacted this gent asking him for a refund and he ignores my efforts entirely. I am posting this to advise any potential customers of this seller to AVOID doing business with him Currently, I am in the process of legal action againt this crook.His actions are obviously dishonest in nature and I have adequate proof in the form of Emails from him and, two DOA radios to prove it.

Buyers beware AVOID THIS CLOWN !!.Dont get SCREWED like I did by this jerk !)<:

This dual band ht works and looks good.
It does 2 meters and 440 at the same time.
I can be used for cross band repeat.
rx 100.000 to 985.000
Comes with 2 5 watt batteries.
One comes with a charger the other one need a drop in charger.
Also comes with rubber duck and manual in pdf wich is 3.09MB.
$150 + shipping ups insured.
E-mail me for picture of the radio.

> --scott
> --
> "C'est un Nagra. C'est suisse, et tres, tres precis."

I am not an expert on the history of CB -- but -- I was a ham when 11 meters was turned into the Class D Citizens Band in 1959. My recollection is that it was intended to be a business band. At that time, the only way anyone could have two-way radio service was the expensive route -- buy commercial gear, have a licensed engineer install and maintain it, etc.

The Class D CB was supposed to provide the little guy with simple, short-range radio communications:
-- tractor to farmhouse
-- florist to delivery vans
-- and the like

A lot of old, stick-in-the-mud traditionalist hams argued that enabling people to get two-way radio equipment with no test and no qualifications other than fill in a box top was a recipe for disaster. But what did these old fools know about it?

My rig at the time was an old Harvey-Wells TBS-50D and a Hallicrafters receiver of some sort. The H-W had 11 meters --807 in the final -- I did not put it on 11 meters after we lost the band but I did listen. It was all very pleasant and polite -- in 1959.

I graduated from high school in 1962 and from college in 1967 then went on an all-expense paid dream vacation to Vietnam -- you may have heard about Vietnam -- it was in all the newspapers 35 years ago.

When I got back on the air in the early 1970's, CB was the totally useless band that it is now. The Army sent me to graduate school at the Univ of Arizona in Tucson. I set up my ham station and was on the air several times a week. I had a lot of interference on 20 and 10 meters from a neighborhood CB'er -- running a Collins S-Line complete with a 30L-1 "leener" with a speech processor and echo box both cranked to the max. I attempted to reason with the asshole who turned out to have the IQ of an earthworm -- and he was one of the smarter CB'ers I've known -- I gave up on him -- I did report him to the FCC. That was a waste of time.

CB proves that, without standards to filter out the entrants, the lowest common denominator will prevail -- and humankind is capable of some mighty low shit. Just listen to 11 meters, the "free-band," and the low end of 10.

Regards,
Joe S.

> Some of you ebay regulars explain this one.
>
> Found an item on ebay that I need. Set up a very generous esnipe bid for
> it. 18 hours before the auction was due to end, the seller withdrew the
> item from sale.

<snippety>

For my part: I've only pulled three auctions in my entire time on
Ebay, and the pulled items had no bids.

There were various reasons. In one case, the item got knocked off a
shelf, and damaged in such a way that I didn't feel right selling it. In
another, the initial listing was a mistake on my part (the item was a
fairly exotic I/O board for older DEC computers -- PDP-11's, etc. -- and
was destined for a wholesaler).

The final case was where one of my closest friends, who's done a
whole lot for me and barely asked for anything in return, asked me to
sell him a few more DEC parts I'd put up that no one had bid on. I opted
to do so. If there had been bids on the item, I would probably have been
a little more leery about pulling it.

What I'm getting at is that there are legitimate reasons to pull
auctions. The seller will usually state what they are in the listing. I
do agree that pulling an item which has active bids, and not giving some
sort of justification, is pretty ratty.

Keep the peace(es).

That means you exceeded the maximum that you were initially willing to pay.
So why didn't you bid higher in the first place?

I've won many auctions without the aid of sniping software simply because I
did put in my true maximum bid.

4316. Motorola Programming & Parts

This seems to be the right place to post what I'm about to. If it's not, well... I won't do it again. ;-)

SHAMELESS PLUG ALERT...

Besides my day job, I own/operate Blue Feather Technologies as a side business. I recently became established with Motorola as a reseller, and I've also set myself up with a license to use their radio service software.

I can program and service a variety of Motorola portables, mobiles, base stations, and repeaters. I specialize in the conversion of commercial gear to ham use, and I can order just about any part or accessory that's in Motorola's current catalog. I think my rates will be pretty competitive with the local commercial service shops.

There's a few things I don't do. Specifically, CB or FRS radios, or anything having to do with trunking. I really don't want to get involved in any of them.

In any case, here's the link for details.

http://www.bluefeathertech.com/rf.html

Thanks for putting up with yet another ad.

What's worse, is that some of the radios out there that -can- be modified,
will cover from just below 25MHz (12m) up to, through 11m and above, some
going beyond 30MHz.

There's activity from 25MHz to 30MHz, open band or not.

Since there seems little to be done about the 'free-banders', we can always
use them for Beacons between 12, and 10m.

Make the best out of a bad situation :-)

>> I never won an auction until I started using that "useless sniping
>> software."

>I would pull my auction if I knew it was getting "e-sniped" Thanks for the heads
>up. Whats your e-bay id again?

That's part of the point of sniping software... it isn't a bid at all, up until the last moment. eBay doesn't see a completed bid until the last second.

One result of that is that eBay's general rule against cancelling an auction after a legitimate bid has been entered, doesn't apply to snipes, because a snipe doesn't "exist" in eBay's computers.

Another result is that the auction owner really can't tell if his/her auction is about to be sniped... all he sees is that not a lot of bids have been entered (or even none). As a result, the auction owner might end up cancelling an auction for which a couple of lucrative snipes had been entered, never know that they were there, and lose out on a good sale.

Sniping works in some cases, I think, because a lot of people prefer to do their auction bidding in real-time, and don't follow eBay's advice to place one bid at the highest price you're really willing to pay. These folks place a preliminary (lower) bid, and then decide later whether to raise it, and how much.

I suspect that these folks feel that by watching what their competition bids, they can get a better idea of how much the auctioned item is "really worth". Rather than doing advanced research on the actual market value, they "play poker" with their bids, and they "raise" the other "player" repeatedly. It can be exciting, yeah, but there's a competitive feedback effect which can result in two or more bidders ending up raising their bids to well above what a similar or identical product sells for, new, on the retail market. I've seen the term "feeding frenzy" used.

Sniping is one way to actually follow eBay's dictum to "bid once, at your real maximum willingness-to-pay" and reduce the chance that one or two other bidders will go into a competitive frenzy and decide at the last minute to outbid you by a dollar. You make the same decision about what your maximum offer will be, and it ends up being "fought out" against every other bidder who also followed the "bid the maximum you're willing to pay", just as if there had been no sniping. The only real advantage that a snipe has, is that it doesn't tend to stimulate a feeding frenzy among the "poker players" (please forgive

the mixed metaphor ;-)

I've seen auctions in which the high bid doubled, or even tripled, in
the last fraction of a minute as a result of a bunch of snipes taking
effect.

Yeah, I've sniped... and I've done manual bidding days in advance...
and I've also had one or two of my own auctions sniped. I don't see
it as a big deal, either way.

Yes, I have begun to look around for one of these 140/141T's. My only
concern here would be how it would hold up, especially being used. Also,
how easy/difficult is it to service yourself if the need arose?

AJ

Ralph, the rules you list apply to RF power amplifiers, not what we were discussing. We had already agreed earlier that the amplifier described is illegal to sell, as is any non-certified device capable of transmitting in or around the CB frequencies. However, this brought up the issue of early transmitters with the 11 meter band built in, which is what we were discussing when you joined in.

I've seen several auctions pulled, so obviously eBay does pull these auctions when they discover them or are made aware of them. Again, this one probably slipped through because it was listed under ham radio and didn't mention CB. Sadly, the eBay employee who received your complaint either didn't understand auctions like this violated the rules or didn't understand the auction item well enough to realize it violated the rules. These employees are often not radio literate, so we have to explain these things carefully to them.

The limits are 4 watts AM and 12 watts SSB. See the Code of Fed.
Regulations, Title 47, Sec. 95.639...

(c) No CB transmitter, under any condition of modulation, shall exceed:
(1) 4 W Carrier power when transmitting emission type A1D or A3E;
(2) 12 W peak envelope TP when transmitting emission type H1D, J1D,
R1D, H3E, J3E or R3E. Each CB transmitter which transmits emission
type H3E, J3E or R3E must automatically prevent the TP from
exceeding 12 W peak envelope TP or the manufacturer's rated peak
envelope TP, whichever is less.

You hit it right in the head - the mid-seventies. In late 1973, when I got my first CB license, it was a relatively tame radio service. By 1977, when I got my last CB license, it was a mess following the trucker movie boom in the years just before that.

I've tried many cw decoders with poor to fair result, now I'm using
MRP40 cw decoder from, it outperforms all others. It is the best sound
card CW decoder I've seen. It pulls the cw sig out of the "mud" of
noise.
On your radio you can switch of CW Filter and AGC; MRP40 does it all
itself by software. Fading, noise, QRM as well as near by sigs do not
disturb the decoding. It can not compensate extremly poor hand sent
code but in case decoding to ascii is not possible it displays
graphically the the dots and dashes exactly as they come in so one can
visually decode the weak part of incoming text.
This is what other hams say on the report page:
http://www.POLAR-Electric.com/Morse/MRP40-EN/Reports.html
download page is at:
http://www.POLAR-Electric.com/Morse/MRP40-EN/load-EM.html

Sounds like 'Brenda Ann' was spouting the BS that a lot of the CBers
passed around when they went from 23 to 40 channels, and the hardware
suddenly had to be 'cleaned up'.

Mike

The 141's ect are reliable and eminently servicable. They are full of
metal sheeting, PCB's, wires, transistors, diodes, resistors, cap's
and L's.
The service manuals are superb.

Note though, that the initial mixer frequencies are -high- and would
need capable test gear to fault find in these areas.

I've seen legit auctions for SB-200's pulled. In one case, I'm
guessing that the title included "LINEAR" or "AMP" or some other term
that didn't pass their filters or maybe the listing was somehow linked
to a CB sales area.

The amplifier mess is one of those problems without a good solution.

Then there was an SB-200 that went for way above my price range. I'm
told that happened because it included some un-described but visible in
the picture, CB products. One was called a "Golden Eagle."

BTW, I'm looking for a "needs-work" SB-200. Strangely, these have been
going for over $250 on eBay.

The CB band was beter than what I have heard on 80 meters now back in the late 60s and untuil I stopped listing to it around 1973. Most were running about 100 to 500 watt amps at the house and from 50 to 100 watts in the cars. The amps were using from 4 to 12 of the 1625 tubes. Guy in Elkin, NC made a bunch of them. No one payed the rules any attention but atleast there was none of the bad language and such being used.

Those specs were directly from the manufacturer.. I bought several radios in 1977 (had to replace the ones I had, which were no longer legal, and right on the box the specs said "new standard 25W PEP SSB" I'm in the process of looking for some of the old radios in a google search to post those specs. I have found that the new radios are limited to 12W PEP.

Yep. By the way, speaking of CB myths from that time, many were confused about the rule that says a CB antenna can be no higher than 60 feet or 20 feet above an existing object (building, tree, etc) if higher than 60 feet.

Many thought that meant no antenna could extend above 60 feet or above 20 feet when on a mast. As a result, many installed mast supported antennas only 20 feet above the ground. It was years before most "got" the meaning of that rule.

But not all "got" it. Confusion about this rule still exists to this day. When I first visited this area several years ago, I noticed a local CB radio "expert" had a huge quad mounted on a small mast - the bottom of the antenna was only inches off the ground. When I asked why, he cited this rule as the reason his antenna could be no higher than 20 feet.

Talking of service manuals do HP sell them for anything, I have an 8591E with a power supply fault and I can't fix the thing. Does anyone know how much they cost or how to get them.

Do you mean the black anodized alluminum extrusions?? I made up a bunch using bar stock that I ran through an end mill to create the grooves. Local anodizing shop blackened them for me. Cut to length and pre drill the two mounting holes in each piece but do NOT tap the holes. This gives the shop a place to suspend the pieces in the tank. After the pieces are anodized, then tap and couter sink the mounting holes. If you tap the holes before anodizing, the threads get screwed up by the suspension hooks and the anodizing adds to the dimension of the thread and screws sieze up in them. It is cheaper to annodize the entire length of bar stock in one operation but then you have shiny alluminum at each end as you cut to length. Suspose you could use "gun blue" or something to mask these ends but the cosmetics will not be as good.

I will be doing a bunch of cabinets later this year and could make some extras for you. Remove the obvious to email me.

Steve

Your best bet is to hunt up an old 486 or something, load it
up with DOS, and run it that way.

I can tell you from personal experience that Motorola has not
updated very many of their RSS packages to reflect increases in CPU
speed. Make that 'hardly any.' This is why older computers are still
very useful.

Good luck.

4347. JDR Model 3500 Oscilloscope

Does anyone own a JDR model 3500 Oscilloscope? I have one that has been working fine but recently lost the Horizontal Sweep function. The Horizontal Amplifier stages are working normally.
Any one have the same experience? Anyone know where to obtain service information for this unit? JDR does not support this unit any longer. Thank you.....Jay.

Speaking of "not getting it", as I drive around, I notice antennas, and sometimes I notice some pretty odd ducks. Probably the best one, in the "not falling down" class, was a CB ringo ranger, with an expensive (yaesu?) rotor mounted underneath.

Well, maybe there used to be a beam up there.. :)

Rules, Laws all mean nothing to commercial business.

At any Travel Centers of America truck stop you can find radios that cover
25-30 Mhz, 100 watt power rf amplifiers
HF rigs all sold to anybody. Not just a few but dozens of chinese copy
rigs.

Saw one that had a band switch labled "10 meters, 11 meters, open"

Wonder what "open" means..

I downloaded it and tried it. Seems good on RX but Norbert seems to
expect you to wire up an interface to fit his program, rather that to
have designed his program to work with RigBlaster or Rascal
interfaces.

As a result, if you try to use one of these interfaces, CW is not sent
properly and there are timing problems. I guess the concept known in
the USA as "marketing" has not caught on in Deutschland.

judging by the amount of traffic it generated in the newsgroup, I'd say it's nothing more than a conversation piece. ;-)

What it is though, to answer your question, is an illegal amplifier for 11meters.

2 transistors driving 8 in DC service - these are generally trunk mounted, with oodles and gobs and lots and lots of DC AMPS driving it.

Someone posted somewhere, pictures of the SuperBowl of key-down contests, with some vehicles running up to 7 and 8 SEPERATE alternators, to get the desired amount of amperage capacity to run one of those things mobile.

All I want to do, is run a pair of 4CX250b's in class AB1 mobile for a little bit
of extra power output to my bugcatcher on 75 and 40m. Perhaps it's time to look at solid-state transistor amplifiers.

Has anyone used/heard/worked with the new Class E amps?

One single MOSFET device, ran on around 115vcc with an efficiency rating of like 95%?
